Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

12.341.1 Detailed Description

This class implements a PvtInterface for the RTKLIB PVT block.
Global configuration options used:
GNSS-SDR.observation_date - approximate date of the signal capture in YYYY-MM-DD or YYYY format, used to resolve the GPS mod-1024 week-number rollover when post-processing recorded files (empty: derive it from the system clock) GNSS-SDR.pre_2009_file - deprecated, use GNSS-SDR.observation_date instead; flag indicating a file captured in the Aug 1999 - Apr 2019 week-number era (false) GNSS-SDR.observable_interval_ms - (20)
It supports the following configuration options:

.dump - (false) .dump_filename - ("./pvt.dat") .dump_mat - (true) .rtk_trace_level - debug level for the RTKLIB methods (0)
.output_rate_ms - (500) Note that the actual rate is the least common multiple of this value and GNSS-SDR.↩ observable_interval_ms .display_rate_ms - (500)
.flag_nmea_tty_port - (false) .nmea_dump_filename - ("./nmea_pvt.nmea") .nmea_dump_devname - ("/dev/tty1")
.rinex_version - (3) values 2 (2.11), 3 (3.02) or 4 (4.02), overridden by -RINEX_version=n.nn command line argument .rinexobs_rate_ms - rate at which RINEX observations are written (1000). Note that the actual rate is the least common multiple of this value and .output_rate_ms .rinex_name - (-RINEX_name command-line argument)
.flag_rtcm_tty_port - (false) .rtcm_dump_devname - ("/dev/pts/1") .flag_rtcm_server - (false) .rtcm_tcp_port - (2101) .rtcm_station_id - (1234) Output rates ... all values are LCM with the computed output rate (above) .rtcm_↩ MT1019_rate_ms - (5000) .rtcm_MT1020_rate_ms - (5000) .rtcm_MT1045_rate_ms - (5000) .rtcm_MSM_rate_ms - (1000) .rtcm_MT1077_rate_ms - (.rtcm_MSM_rate_ms) .rtcm_MT1087_rate_ms - (.rtcm_MSM_rate_ms) .rtcm↩ _MT1097_rate_ms - (.rtcm_MSM_rate_ms)
Fixed-base RTK input through NTRIP (disabled by default): .ntrip_client_enabled - (false) .ntrip_caster_address - caster hostname or IPv4 address, without a scheme or port ("") .ntrip_caster_port - (2101) .ntrip_mountpoint - caster mountpoint ("") .ntrip_username - Basic-authentication username ("") .ntrip_password - Basic-authentication password ("") .ntrip_password_env - environment variable containing the password (""), mutually exclusive with .ntrip_password .ntrip_version - 2 prefers v2 with one compatible v1 retry; 1 forces legacy v1 (2) .ntrip_tls_enabled - TLS 1.2-or-newer transport with system-CA certificate and hostname verification (false) .ntrip_inactivity_timeout_↩ ms - (10000) .ntrip_reconnect_interval_ms - (10000) .ntrip_max_correction_age_s - (5.0) .ntrip_send_gga - upload the rover position as NMEA GGA, required by VRS/nearest-station casters (true) .ntrip_gga_period_ms - period of the GGA upload (10000) .ntrip_station_id - expected RTCM station ID, or zero to accept any stream station (0) .ntrip_fallback_to_single - report SOLQ_SINGLE while fixed-base data is unavailable (true) Supported rover channel sets, per system: GPS 1C alone, 1C+2S, or 1C+L5; Galileo 1B alone or 1B+5X; BeiDou B1C alone; in any combination across systems. num_bands is derived from the channel set, navigation_system must match the enabled constellations, and positioning_mode must be Static or Kinematic. The base must provide its position through RTCM 1005/1006 and observations through legacy 1002/1004 or MSM messages; VRS/nearest-station casters are supported through the periodic GGA upload.
.kml_rate_ms - (1000) .gpx_rate_ms - (1000) .geojson_rate_ms - (1000) .nmea_rate_ms - (1000)
.positioning_mode - The RTKLIB positioning mode. ("Single") Supported values are "Single", "Static", "Kinematic", "PPP_Static" and "PPP_Kinematic". Unsupported modes include DGPS/DGNSS, Moving Baseline, Fixed, and PPP-fixed .num_bands - number of frequencies to use, between 1 and 3. Default is based on the channels configured .elevation_mask - (15.0). Value must be in the range [0,90.0] .dynamics_model - (0) 0:none, 1:velocity, 2:acceleration .satellite_ephemeris - ("Broadcast"). Supported values are "Broadcast" and "SBAS". "SBAS" applies the fast and long-term satellite corrections received from an SBAS telemetry channel. Legacy EGNOS L1 corrections augment GPS L1 observations; satellites without valid corrections are excluded .sbas_satellite - (0). SBAS PRN whose correction stream is used. Zero selects the first received stream; set a PRN in [120,138] when tracking multiple GEOs .iono_model - ("OFF"). Supported values are "OFF", "Broadcast", "SBAS", "Iono-Free-LC", "Estimate_STEC", "IONEX". Unsupported values include QZSS broadcast, QZSS LEX, and SLANT TEC. .trop_↩ model - ("OFF"). Supported values are "OFF", "Saastamoinen", "SBAS", "Estimate_ZTD", and "Estimate_ZTD_↩ Grad". Unsupported values include ZTD correction and ZTD+grad correction .phwindup - phase windup correction for PPP modes (0) .reject_GPS_IIA - whether the GPS Block IIA satellites in eclipse are excluded (0). Only applies in PPP-∗ modes .raim_fde - whether RAIM (receiver autonomous integrity monitoring) FDE (fault detection and exclusion) is enabled (0) .earth_tide - (0) .navigation_system - mask of navigation systems to use. Default based on configured channels 0x01:GPS, 0x02:SBAS, 0x04:GLONASS, 0x08:Galileo, 0x10:QZSS, 0x20:BeiDou, 0x40:IRNS, 0x80:LEO
.AR_GPS - Ambiguity Resolution mode for GPS ("Continuous"). Supported values are "OFF", "Continuous", "↩ Instantaneous", "Fix-and-Hold", "PPP-AR". Unsupported values include PPP-AR ILS, WLNL, and TCAR. .AR_GLO - Ambiguity Resolution mode for GLONASS (1). Value must be in the range [0,3]. (0:off,1:on,2:auto cal,3:ext cal) .AR_DBS - Ambiguity Resolution Mode for BeiDou (1). Value must be in the range [0,1]. (0:off,1:on) .min_ratio_↩ to_fix_ambiguity - (3.0) .min_lock_to_fix_ambiguity - (0) .min_elevation_to_fix_ambiguity - minimum elevation (deg) to fix integer ambiguity (0.0) .outage_reset_ambiguity - (5) .slip_threshold - (0.05) .threshold_reject_gdop - if GDOP is over this value, the observable is excluded (30.0) .threshold_reject_innovation - if innovation is over this value, the observable is excluded (30.0) .number_filter_iter - number of iterations for the estimation filter (1) .bias_0 - (30.0) .iono_0 - (0.03) .trop_0 - (0.3) .sigma_bias - process noise stddev of carrier-phase bias(ambiguity)(cycle/↩ sqrt(s)) (1e-4) .sigma_iono - process noise stddev of vertical ionospheric delay per 10km baseline (m/sqrt(s)) (1e-3) .sigma_trop - process noise stddev of zenith tropospheric delay (m/sqrt(s)) (1e-4) .sigma_acch - process noise stddev of the receiver acceleration horizontal component (m/s2/sqrt(s)) (1e-1) .sigma_accv - process noise stddev

of the receiver acceleration vertical component (m/s2/sqrt(s)) (1e-2) .sigma_pos - (0.0) .code_phase_error_ratio_l1 - (100.0) .code_phase_error_ratio_l2 - (100.0) .code_phase_error_ratio_l5 - (100.0) .carrier_phase_error_factor_a - (0.003) .carrier_phase_error_factor_b - (0.003)
.output_enabled - (true) .rinex_output_enabled - (.output_enabled) .gpx_output_enabled - (.output_enabled) .geojson_output_enabled - (.output_enabled) .kml_output_enabled - (.output_enabled) .xml_output_enabled - (.output_enabled) .nmea_output_enabled - (.output_enabled) .rtcm_output_enabled - (false)
.output_path - directory to which output files are written (".") .rinex_output_path - (.output_path) .gpx_output_↩ path - (.output_path) .geojson_output_path - (.output_path) .kml_output_path - (.output_path) .xml_output_path - (.output_path) .nmea_output_path - (.output_path) .rtcm_output_path - (.output_path)
.enable_monitor - enable the PVT monitor (false) .monitor_client_addresses - ("127.0.0.1") .monitor_udp_port - DO NOT USE THE DEFAULT (1234) .enable_protobuf - serialize using protocol buffers (true). Monitor.enable_protobuf if true, sets this to true
.enable_monitor_ephemeris - enable the ephemeris monitor (false) .monitor_ephemeris_client_addresses - ("127.0.0.1") .monitor_ephemeris_udp_port - DO NOT USE THE DEFAULT (1234)
.show_local_time_zone - (false) .enable_rx_clock_correction - (false) .max_clock_offset_ms - (40)
Definition at line 204 of file rtklib_pvt.h.

12.341.2 Member Function Documentation

12.341.2.1 clear_ephemeris()

```
void Rtklib_Pvt::clear_ephemeris ()  [override], [virtual]
```
Implements PvtInterface.

12.341.2.2 clear_ephemeris_keep_almanac()

```
void Rtklib_Pvt::clear_ephemeris_keep_almanac ()  [override], [virtual]
```
Implements PvtInterface.

12.341.2.3 connect()

```
void Rtklib_Pvt::connect (
            gr::top_block_sptr top_block)  [override], [virtual]
```
Implements GNSSBlockInterface.

12.341.2.4 disconnect()

```
void Rtklib_Pvt::disconnect (
            gr::top_block_sptr top_block)  [override], [virtual]
```
Implements GNSSBlockInterface.

12.341.2.5 get_beidou_cnav1_ephemeris()

```
std::map< int, Beidou_Cnav1_Ephemeris > Rtklib_Pvt::get_beidou_cnav1_ephemeris () const  [override], [virtual]
```
Reimplemented from PvtInterface.

12.341.2.6 get_beidou_cnav2_ephemeris()

```
std::map< int, Beidou_Cnav1_Ephemeris > Rtklib_Pvt::get_beidou_cnav2_ephemeris () const  [override], [virtual]
```
Reimplemented from PvtInterface.

12.341.2.7 get_beidou_dnav_almanac()

```
std::map< int, Beidou_Dnav_Almanac > Rtklib_Pvt::get_beidou_dnav_almanac () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.8 get_beidou_dnav_ephemeris()

```
std::map< int, Beidou_Dnav_Ephemeris > Rtklib_Pvt::get_beidou_dnav_ephemeris () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.9 get_galileo_almanac()

```
std::map< int, Galileo_Almanac > Rtklib_Pvt::get_galileo_almanac () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.10 get_galileo_ephemeris()

```
std::map< int, Galileo_Ephemeris > Rtklib_Pvt::get_galileo_ephemeris () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.11 get_glonass_almanac()

```
std::map< int, Glonass_Gnav_Almanac > Rtklib_Pvt::get_glonass_almanac () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.12 get_glonass_ephemeris()

```
std::map< int, Glonass_Gnav_Ephemeris > Rtklib_Pvt::get_glonass_ephemeris () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.13 get_glonass_utc_model()

```
Glonass_Gnav_Utc_Model Rtklib_Pvt::get_glonass_utc_model () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.14 get_gps_almanac()

```
std::map< int, Gps_Almanac > Rtklib_Pvt::get_gps_almanac () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.15 get_gps_cnav_ephemeris()

```
std::map< int, Gps_CNAV_Ephemeris > Rtklib_Pvt::get_gps_cnav_ephemeris () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.16 get_gps_ephemeris()

```
std::map< int, Gps_Ephemeris > Rtklib_Pvt::get_gps_ephemeris () const  [override], [virtual]
```
Implements PvtInterface.

12.341.2.17 get_latest_PVT()

```
bool Rtklib_Pvt::get_latest_PVT (
            double * longitude_deg,
            double * latitude_deg,
            double * height_m,
            double * ground_speed_kmh,
            double * course_over_ground_deg,
            time_t * UTC_time)  [override], [virtual]
```
Implements PvtInterface.

12.341.2.18 get_left_block()

`gr::basic_block_sptr Rtklib_Pvt::get_left_block () [override], [virtual]`
Implements GNSSBlockInterface.

12.341.2.19 get_right_block()

`gr::basic_block_sptr Rtklib_Pvt::get_right_block () [override], [virtual]`
Implements GNSSBlockInterface.

12.341.2.20 implementation()

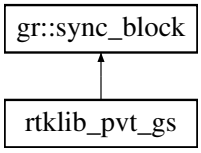
`std::string Rtklib_Pvt::implementation () [inline], [override], [virtual]`
Returns "RTKLIB_PVT".
Implements GNSSBlockInterface.
Definition at line 220 of file rtklib_pvt.h.

12.341.2.21 item_size()

`size_t Rtklib_Pvt::item_size () [inline], [override], [virtual]`
All blocks must have an item_size() function implementation.
Implements GNSSBlockInterface.
Definition at line 251 of file rtklib_pvt.h.

12.341.2.22 reset()

`void Rtklib_Pvt::reset () [inline], [override], [virtual]`
Implements PvtInterface.
Definition at line 245 of file rtklib_pvt.h.



12.341.2.23 role()

`std::string Rtklib_Pvt::role () [inline], [override], [virtual]`
Implements GNSSBlockInterface.
Definition at line 214 of file rtklib_pvt.h.
The documentation for this class was generated from the following file:

- rtklib_pvt.h

12.342 rtklib_pvt_gs Class Reference

This class implements a block that computes the PVT solution using the RTKLIB integrated library.
`#include <rtklib_pvt_gs.h>`
Inheritance diagram for rtklib_pvt_gs:

Public Member Functions

- ~rtklib_pvt_gs () override
  Default destructor.
- std::map< int, Gps_CNAV_Ephemeris > get_gps_cnav_ephemeris_map () const
  Get latest set of GPS ephemeris from PVT block.
- std::map< int, Glonass_Gnav_Ephemeris > **get_glonass_ephemeris_map** () const

- std::map< int, Glonass_Gnav_Almanac > **get_glonass_almanac_map** () const
- Glonass_Gnav_Utc_Model **get_glonass_utc_model** () const
- std::map< int, Gps_Ephemeris > **get_gps_ephemeris_map** () const
- std::map< int, Gps_Almanac > get_gps_almanac_map () const

  Get latest set of GPS almanac from PVT block.
- std::map< int, Galileo_Ephemeris > get_galileo_ephemeris_map () const

  Get latest set of Galileo ephemeris from PVT block.
- std::map< int, Galileo_Almanac > get_galileo_almanac_map () const

  Get latest set of Galileo almanac from PVT block.
- std::map< int, Beidou_Dnav_Ephemeris > get_beidou_dnav_ephemeris_map () const

  Get latest set of BeiDou DNAV ephemeris from PVT block.
- std::map< int, Beidou_Cnav1_Ephemeris > **get_beidou_cnav1_ephemeris_map** () const
- std::map< int, Beidou_Cnav1_Ephemeris > **get_beidou_cnav2_ephemeris_map** () const
- std::map< int, Beidou_Dnav_Almanac > get_beidou_dnav_almanac_map () const

  Get latest set of BeiDou DNAV almanac from PVT block.
- void clear_ephemeris ()

  Clears the published navigation snapshot now and the solver maps at the worker's next work() or telemetry callback.
- void clear_ephemeris_keep_almanac ()

  Clears the ephemeris entries of the published navigation snapshot now and the solver ephemeris maps at the worker's next work() or telemetry callback, leaving the GPS, Galileo, BeiDou and GLONASS almanacs untouched.
- bool get_latest_PVT (double *longitude_deg, double *latitude_deg, double *height_m, double *ground_speed_kmh, double *course_over_ground_deg, time_t *UTC_time) const

  Get the latest Position WGS84 [deg], Ground Velocity, Course over Ground, and UTC Time, if available.
- int work (int noutput_items, gr_vector_const_void_star &input_items, gr_vector_void_star &output_items) override

  PVT Signal Processing.

Static Public Member Functions

- static Gnss_Synchro interpolate_observable (const Gnss_Synchro &early, const Gnss_Synchro &late, double time_factor, double rx_time_s)

  Interpolates one observable between two epochs, in the carrier polarity frame of the later epoch.

Friends

- rtklib_pvt_gs_sptr **rtklib_make_pvt_gs** (uint32_t nchannels, const Pvt_Conf &conf_, const rtk_t &rtk, const SensorDataSourceConfiguration &sensor_data_configuration)

12.342.1 Detailed Description

This class implements a block that computes the PVT solution using the RTKLIB integrated library.

12.342.2 Constructor & Destructor Documentation

12.342.2.1 ~rtklib_pvt_gs()

```
rtklib_pvt_gs::~rtklib_pvt_gs () [override]
```

Default destructor.

12.342.3 Member Function Documentation

12.342.3.1 clear_ephemeris()

```
void rtklib_pvt_gs::clear_ephemeris ()
```

Clears the published navigation snapshot now and the solver maps at the worker's next work() or telemetry callback.

12.342.3.2 clear_ephemeris_keep_almanac()

```
void rtklib_pvt_gs::clear_ephemeris_keep_almanac ()
```

Clears the ephemeris entries of the published navigation snapshot now and the solver ephemeris maps at the worker's next work() or telemetry callback, leaving the GPS, Galileo, BeiDou and GLONASS almanacs untouched.

12.342.3.3 get_beidou_dnav_almanac_map()

```
std::map< int, Beidou_Dnav_Almanac > rtklib_pvt_gs::get_beidou_dnav_almanac_map () const
```

Get latest set of BeiDou DNAV almanac from PVT block.

12.342.3.4 get_beidou_dnav_ephemeris_map()

```
std::map< int, Beidou_Dnav_Ephemeris > rtklib_pvt_gs::get_beidou_dnav_ephemeris_map () const
```

Get latest set of BeiDou DNAV ephemeris from PVT block.

12.342.3.5 get_galileo_almanac_map()

```
std::map< int, Galileo_Almanac > rtklib_pvt_gs::get_galileo_almanac_map () const
```

Get latest set of Galileo almanac from PVT block.

12.342.3.6 get_galileo_ephemeris_map()

```
std::map< int, Galileo_Ephemeris > rtklib_pvt_gs::get_galileo_ephemeris_map () const
```

Get latest set of Galileo ephemeris from PVT block.

12.342.3.7 get_gps_almanac_map()

```
std::map< int, Gps_Almanac > rtklib_pvt_gs::get_gps_almanac_map () const
```

Get latest set of GPS almanac from PVT block.

12.342.3.8 get_gps_cnav_ephemeris_map()

```
std::map< int, Gps_CNAV_Ephemeris > rtklib_pvt_gs::get_gps_cnav_ephemeris_map () const
```

Get latest set of GPS ephemeris from PVT block.

12.342.3.9 get_latest_PVT()

```
bool rtklib_pvt_gs::get_latest_PVT (
            double * longitude_deg,
            double * latitude_deg,
            double * height_m,
            double * ground_speed_kmh,
            double * course_over_ground_deg,
            time_t * UTC_time) const
```

Get the latest Position WGS84 [deg], Ground Velocity, Course over Ground, and UTC Time, if available.

12.342.3.10 interpolate_observable()

```
Gnss_Synchro rtklib_pvt_gs::interpolate_observable (
            const Gnss_Synchro & early,
            const Gnss_Synchro & late,
            double time_factor,
            double rx_time_s)  [static]
```

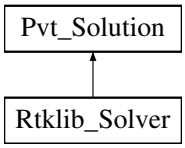
Interpolates one observable between two epochs, in the carrier polarity frame of the later epoch.
A plain linear carrier-phase interpolation across a PLL-180 half-cycle re-resolution would leak a fraction of the pi step into the output with no slip flag attached; the early phase is therefore shifted into the late epoch's polarity frame first, the late polarity is stamped on the output, and a slip on either endpoint (or a polarity change itself) marks the output.

12.342.3.11 work()

```
int rtklib_pvt_gs::work (
            int noutput_items,
            gr_vector_const_void_star & input_items,
            gr_vector_void_star & output_items)  [override]
```

PVT Signal Processing.

The documentation for this class was generated from the following file:



- rtklib_pvt_gs.h

12.343 Rtklib_Solver Class Reference

This class implements a PVT solution based on RTKLIB.

`#include <rtklib_solver.h>`

Inheritance diagram for Rtklib_Solver:

Public Member Functions

- **Rtklib_Solver** (const rtk_t &rtk, const Pvt_Conf &conf, const std::string &dump_filename, uint32_t signal_↩ enabled_flags, bool flag_dump_to_file, bool flag_dump_to_mat)

- std::array< double, 3 > **get_rx_vel** () const
- boost::posix_time::ptime **get_position_UTC_time** () const
- double get_latitude () const

  Get RX position Latitude WGS84 [deg].
- double get_longitude () const

  Get RX position Longitude WGS84 [deg].
- double get_height () const

  Get RX position height WGS84 [m].
- double get_time_offset_s () const

  Get RX time offset [s].
- double get_clock_drift_ppm () const

  Get the Rx clock drift [ppm].
- double get_speed_over_ground () const

  Get RX speed over ground [m/s].
- double get_course_over_ground () const

  Get RX course over ground [deg].
- int get_num_valid_observations () const

  Get the number of valid pseudorange observations (valid satellites).
- int32_t get_ref_gps_week () const

  Get the reference GPS week used to resolve the mod-1024 week rollover (0 if unset).
- bool **is_valid_position** () const
- void set_rx_pos (const std::array< double, 3 > &pos)

  Set position: X, Y, Z in Cartesian ECEF coordinates [m].
- void set_rx_vel (const std::array< double, 3 > &vel)

  Set velocity: East [m/s], North [m/s], Up [m/s].
- void **set_position_UTC_time** (const boost::posix_time::ptime &pt)
- void set_time_offset_s (double offset)

  Set RX time offset [s].
- void set_clock_drift_ppm (double clock_drift_ppm)

  Set the Rx clock drift [ppm].
- void set_speed_over_ground (double speed_m_s)

  Set RX speed over ground [m/s].
- void set_course_over_ground (double cog_deg)

Set RX course over ground [deg].

- void **set_valid_position** (bool is_valid)
- void set_num_valid_observations (int num)

  Set the number of valid pseudorange observations (valid satellites).
- void set_ref_gps_week (int32_t ref_week)

  Set the reference GPS week (e.g., derived from the date of signal capture) used to resolve the mod-1024 week rollover in post-processing mode.

Public Attributes

- sol_t pvt_sol {}
- std::array< ssat_t, MAXSAT > pvt_ssat {}
- Galileo_Ephemeris_Store galileo_ephemeris_store

  Source-aware Galileo ephemeris storage.
- std::map< int, Galileo_Ephemeris > galileo_ephemeris_map

  Compatibility PVT view; source-aware storage is authoritative.
- std::map< int, Galileo_Reduced_CED > galileo_reduced_ced_map

  Map storing provisional Galileo Reduced CED.
- std::map< int, Gps_Ephemeris > gps_ephemeris_map

  Map storing new GPS_Ephemeris.
- std::map< int, Gps_Ephemeris > gps_previous_ephemeris_map

  Previous GPS/QZSS issue retained for SBAS IODE handover.
- std::map< int, Gps_CNAV_Ephemeris > gps_cnav_ephemeris_map

  Map storing new GPS_CNAV_Ephemeris.
- std::map< int, Glonass_Gnav_Ephemeris > glonass_gnav_ephemeris_map

  Map storing new GLONASS GNAV Ephemeris.
- std::map< int, Beidou_Dnav_Ephemeris > beidou_dnav_ephemeris_map

  Map storing new BeiDou DNAV Ephmeris.
- std::map< int, Beidou_Cnav1_Ephemeris > beidou_cnav1_ephemeris_map

  Map storing BeiDou B-CNAV1 ephemeris.

- std::map< int, Bds3_B1c_PageData > beidou_cnav1_page_data_map

Static Public Attributes

- static constexpr int NTRIP_MIN_COMMON_SATELLITES = 4

  Minimum satellites common to rover and base (any constellation) for the fixed-base merge; the solver-owned policy the display layer quotes.

12.343.1 Detailed Description

This class implements a PVT solution based on RTKLIB.
Definition at line 112 of file rtklib_solver.h.

12.343.2 Member Function Documentation

12.343.2.1 get_broadcast_signal_health()

```
bool Rtklib_Solver::get_broadcast_signal_health (
            char system,
            uint32_t prn,
            const std::string & signal,
            uint32_t observation_tow,
            bool & healthy) const
```

Broadcast health of one tracked signal, as reported by the navigation message that carries it: GPS/QZSS L1 C/A from the LNAV SV health (almanac when no ephemeris has been decoded yet), GPS L2C and QZSS L5 from the CNAV per-signal health bits, GPS L5 from the LNAV SV health of the same satellite (the CNAV L5 bit is broadcast as unhealthy while GPS L5 is pre-operational), Galileo per signal (see get_galileo_signal_health(), the almanac health status of the same signal when no ephemeris is available), GLONASS from the GNAV ln/Bn flags, Bei↩ Dou B1I/B3I from the DNAV SV health and B1C/B2a from the B-CNAV1/B-CNAV2 health status. Independent of PVT.use_unhealthy_sats.

Returns

true if health information is available for that signal (healthy is then set)

12.343.2.2 get_gdop()

```
double Rtklib_Solver::get_gdop () const  [override], [virtual]
```

Implements Pvt_Solution.

12.343.2.3 get_hdop()

```
double Rtklib_Solver::get_hdop () const  [override], [virtual]
```

Implements Pvt_Solution.

12.343.2.4 get_pdop()

```
double Rtklib_Solver::get_pdop () const  [override], [virtual]
```

Implements Pvt_Solution.

12.343.2.5 get_vdop()

```
double Rtklib_Solver::get_vdop () const  [override], [virtual]
```

Implements Pvt_Solution.

12.343.2.6 has_precise_ephemeris()

```
bool Rtklib_Solver::has_precise_ephemeris () const  [inline]
```

true only if precise ephemeris and clock products are loaded; used to distinguish real PPP from PPP-mode processing with broadcast products
Definition at line 150 of file rtklib_solver.h.
References has_precise_ephemeris().
Referenced by has_precise_ephemeris().

12.343.2.7 solution_attempted()

```
bool Rtklib_Solver::solution_attempted () const  [inline]
```

true if the last call to get_PVT() had what it takes to compute a solution, whether it succeeded or not; false if it returned without trying (fewer than four satellites with ephemeris, or no fixed-base data with the fallback to single-point positioning disabled)
Definition at line 159 of file rtklib_solver.h.

12.343.3 Member Data Documentation

12.343.3.1 beidou_cnav1_ephemeris_map

```
std::map<int, Beidou_Cnav1_Ephemeris> Rtklib_Solver::beidou_cnav1_ephemeris_map
```

Map storing BeiDou B-CNAV1 ephemeris.
Definition at line 205 of file rtklib_solver.h.

12.343.3.2 beidou_cnav1_iono

```
Beidou_Cnav1_Iono Rtklib_Solver::beidou_cnav1_iono
```

Definition at line 233 of file rtklib_solver.h.

12.343.3.3 beidou_cnav1_page_data_map

```
std::map<int, Bds3_B1c_PageData> Rtklib_Solver::beidou_cnav1_page_data_map
```

Definition at line 236 of file rtklib_solver.h.

12.346 Rtl_Tcp_Dongle_Info Class Reference

This class represents the dongle information which is sent by rtl_tcp.
`#include <rtl_tcp_dongle_info.h>`

Public Types

- enum {
  TUNER_UNKNOWN = 0 , **TUNER_E4000** , **TUNER_FC0012** , **TUNER_FC0013** ,
  TUNER_FC2580 , **TUNER_R820T** , **TUNER_R828D** }

Public Member Functions

- boost::system::error_code **read** (boost::asio::ip::tcp::socket &socket)
- bool **is_valid** () const
- const char * **get_type_name** () const
- double **clip_gain** (int gain) const
- uint32_t get_tuner_type () const
- uint32_t get_tuner_gain_count () const

12.346.1 Detailed Description

This class represents the dongle information which is sent by rtl_tcp.
Definition at line 35 of file rtl_tcp_dongle_info.h.

12.346.2 Member Enumeration Documentation

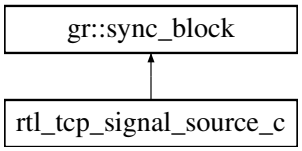
12.346.2.1 anonymous enum

```
anonymous enum
```
Definition at line 38 of file rtl_tcp_dongle_info.h.

12.346.3 Member Function Documentation

12.346.3.1 get_tuner_gain_count()

```
uint32_t Rtl_Tcp_Dongle_Info::get_tuner_gain_count () const  [inline]
```
Definition at line 64 of file rtl_tcp_dongle_info.h.



12.346.3.2 get_tuner_type()

```
uint32_t Rtl_Tcp_Dongle_Info::get_tuner_type () const  [inline]
```
Definition at line 59 of file rtl_tcp_dongle_info.h.
The documentation for this class was generated from the following file:

- rtl_tcp_dongle_info.h

12.347 rtl_tcp_signal_source_c Class Reference

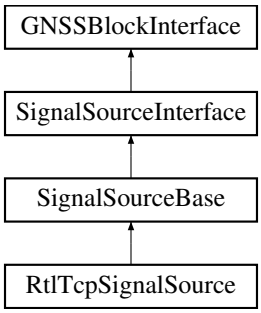
This class reads interleaved I/Q samples from an rtl_tcp server and outputs complex types.
`#include <rtl_tcp_signal_source_c.h>`
Inheritance diagram for rtl_tcp_signal_source_c:

Public Member Functions

- int **work** (int noutput_items, gr_vector_const_void_star &input_items, gr_vector_void_star &output_items)
- void **set_frequency** (int frequency)
- void **set_sample_rate** (int sample_rate)
- void **set_agc_mode** (bool agc)
- void **set_gain** (int gain)
- void **set_if_gain** (int gain)

Friends

- rtl_tcp_signal_source_c_sptr **rtl_tcp_make_signal_source_c** (const std::string &address, int16_t port, bool flip_iq=false)



12.347.1 Detailed Description

This class reads interleaved I/Q samples from an rtl_tcp server and outputs complex types.
Definition at line 65 of file rtl_tcp_signal_source_c.h.
The documentation for this class was generated from the following file:

- rtl_tcp_signal_source_c.h

12.348 RtlTcpSignalSource Class Reference

This class reads from rtl_tcp, which streams interleaved I/Q samples over TCP. (see https://osmocom.org/projects/rtl-sdr/wiki).
`#include <rtl_tcp_signal_source.h>`
Inheritance diagram for RtlTcpSignalSource:

Public Member Functions

- **RtlTcpSignalSource** (const ConfigurationInterface *configuration, const std::string &role, unsigned int in_stream, unsigned int out_stream, Concurrent_Queue< pmt::pmt_t > *queue)
- size_t item_size () override
- void connect (gr::top_block_sptr top_block) override
- void disconnect (gr::top_block_sptr top_block) override
- gr::basic_block_sptr get_left_block () override
- gr::basic_block_sptr get_right_block () override

Public Member Functions inherited from SignalSourceBase

- std::string role () final
- std::string implementation () final
- size_t getRfChannels () const override
- gr::basic_block_sptr get_left_block () override

Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

Additional Inherited Members

Protected Member Functions inherited from SignalSourceBase

- SignalSourceBase (ConfigurationInterface const *configuration, std::string role, std::string impl)

  Constructor.
- size_t decode_item_type (std::string const &item_type, bool *is_interleaved=nullptr, bool throw_on_↩ error=false)

  utility for decoding passed ".item_type" values

12.348.1 Detailed Description

This class reads from rtl_tcp, which streams interleaved I/Q samples over TCP. (see https://osmocom.↩ org/projects/rtl-sdr/wiki).
Definition at line 45 of file rtl_tcp_signal_source.h.

12.348.2 Member Function Documentation

12.348.2.1 connect()

```
void RtlTcpSignalSource::connect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.348.2.2 disconnect()

```
void RtlTcpSignalSource::disconnect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.348.2.3 get_left_block()

```
gr::basic_block_sptr RtlTcpSignalSource::get_left_block ()  [override], [virtual]
```

Implements GNSSBlockInterface.

12.348.2.4 get_right_block()

```
gr::basic_block_sptr RtlTcpSignalSource::get_right_block ()  [override], [virtual]
```

Implements GNSSBlockInterface.

12.348.2.5 item_size()

```
size_t RtlTcpSignalSource::item_size ()  [inline], [override], [virtual]
```

Implements GNSSBlockInterface.
Definition at line 56 of file rtl_tcp_signal_source.h.
The documentation for this class was generated from the following file:

- rtl_tcp_signal_source.h

12.349 SatelliteVisibility Class Reference

Opt-in acquisition search classification: visible, excluded, or unknown. Healthy satellites above the search mask are preferred; unknowns are searched less often. Banned PRNs are omitted, and tracking can override exclusion. Tick() refreshes on reference, fix, navigation-data, position, interval, or expiry changes. Expired data returns satellites to the unknown pool. Disabled by default (GNSS-SDR.enable_visibility_aware_search).
`#include <satellite_visibility.h>`

Public Member Functions

- **SatelliteVisibility** (const std::shared_ptr< ConfigurationInterface > &configuration)
- bool enabled () const
- uint32_t search_ratio () const
- void SetCommandReference (time_t utc_time, const std::array< float, 3 > &LLH, const Monitor_Pvt &current_fix, double receiver_time_s)

  Supplies a telecommand position and UTC epoch, anchored to the current sample clock. Forces the next Tick() to recompute and overrides the current fix/configured reference until a different PVT epoch arrives.
- bool Tick (const std::shared_ptr< PvtInterface > &pvt_ptr, const Monitor_Pvt &fix_status, double receiver_time_s=0.0)

  Refresh visibility using telecommand, fix, then AGNSS reference priority.
- bool **IsVisible** (const Gnss_Satellite &sat) const
- bool **IsExcluded** (const Gnss_Satellite &sat) const
- bool **IsSearchVisible** (const Gnss_Satellite &sat) const
- bool **IsSearchExcluded** (const Gnss_Satellite &sat) const
- bool **PredictedDopplerHz** (const std::shared_ptr< PvtInterface > &pvt_ptr, const Monitor_Pvt &fix_status, double receiver_time_s, const Gnss_Satellite &sat, const std::string &signal, double &doppler_hz) const
- double **PredictedDopplerUncertaintyHz** (const Monitor_Pvt &fix_status, const std::string &signal) const

12.349.1 Detailed Description

Opt-in acquisition search classification: visible, excluded, or unknown. Healthy satellites above the search mask are preferred; unknowns are searched less often. Banned PRNs are omitted, and tracking can override exclusion. Tick() refreshes on reference, fix, navigation-data, position, interval, or expiry changes. Expired data returns satellites to the unknown pool. Disabled by default (GNSS-SDR.enable_visibility_aware_search).
Definition at line 82 of file satellite_visibility.h.

12.349.2 Member Function Documentation

12.349.2.1 enabled()

```
bool SatelliteVisibility::enabled () const  [inline]
```

Definition at line 87 of file satellite_visibility.h.

12.349.2.2 search_ratio()

```
uint32_t SatelliteVisibility::search_ratio () const  [inline]
```

Definition at line 88 of file satellite_visibility.h.

12.349.2.3 SetCommandReference()

```
void SatelliteVisibility::SetCommandReference (
            time_t utc_time,
            const std::array< float, 3 > & LLH,
            const Monitor_Pvt & current_fix,
            double receiver_time_s)
```

Supplies a telecommand position and UTC epoch, anchored to the current sample clock. Forces the next Tick() to recompute and overrides the current fix/configured reference until a different PVT epoch arrives.

12.349.2.4 Tick()

```
bool SatelliteVisibility::Tick (
            const std::shared_ptr< PvtInterface > & pvt_ptr,
            const Monitor_Pvt & fix_status,
            double receiver_time_s = 0.0)
```

Refresh visibility using telecommand, fix, then AGNSS reference priority.

Parameters

receiver_time_s	elapsed sample time; advances epochs between fixes.

Returns

true when classification changes require rebuilding search queues.

The documentation for this class was generated from the following file:

- satellite_visibility.h

12.350 Sbas_Ephemeris Class Reference

This class stores SBAS SV ephemeris data.
`#include <sbas_ephemeris.h>`

Public Member Functions

- void **print** (std::ostream &out)

Public Attributes

- int i_prn {}
  PRN number.
- int i_t0 {}
  Reference epoch time (GPST).
- double d_tof {}
  Time of message frame (GPST).
- int i_sv_ura {}
  SV accuracy (URA index), not standardized.
- bool b_sv_do_not_use {}
  Health status (false:do not use / true:usable).
- double d_pos [3] {}
  Satellite position (m) (ECEF).
- double d_vel [3] {}
  Satellite velocity (m/s) (ECEF).
- double d_acc [3] {}
  Satellite acceleration (m/s^2) (ECEF).
- double d_af0 {}
  Satellite clock-offset (s).
- double d_af1 {}
  Satellite drift (s/s).

12.350.1 Detailed Description

This class stores SBAS SV ephemeris data.
Definition at line 33 of file sbas_ephemeris.h.

12.350.2 Member Data Documentation

12.350.2.1 b_sv_do_not_use

`bool Sbas_Ephemeris::b_sv_do_not_use {}`
Health status (false:do not use / true:usable).
Definition at line 42 of file sbas_ephemeris.h.

12.350.2.2 d_acc

```
double Sbas_Ephemeris::d_acc[3] {}
```
Satellite acceleration (m/s^2) (ECEF).
Definition at line 45 of file sbas_ephemeris.h.

12.350.2.3 d_af0

```
double Sbas_Ephemeris::d_af0 {}
```
Satellite clock-offset (s).
Definition at line 46 of file sbas_ephemeris.h.

12.350.2.4 d_af1

```
double Sbas_Ephemeris::d_af1 {}
```
Satellite drift (s/s).
Definition at line 47 of file sbas_ephemeris.h.

12.350.2.5 d_pos

```
double Sbas_Ephemeris::d_pos[3] {}
```
Satellite position (m) (ECEF).
Definition at line 43 of file sbas_ephemeris.h.

12.350.2.6 d_tof

```
double Sbas_Ephemeris::d_tof {}
```
Time of message frame (GPST).
Definition at line 40 of file sbas_ephemeris.h.

12.350.2.7 d_vel

```
double Sbas_Ephemeris::d_vel[3] {}
```
Satellite velocity (m/s) (ECEF).
Definition at line 44 of file sbas_ephemeris.h.

12.350.2.8 i_prn

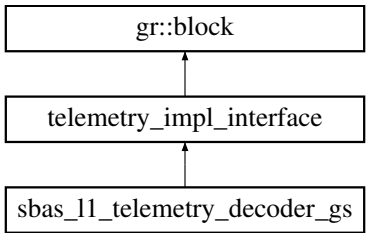
```
int Sbas_Ephemeris::i_prn {}
```
PRN number.
Definition at line 38 of file sbas_ephemeris.h.

12.350.2.9 i_sv_ura

```
int Sbas_Ephemeris::i_sv_ura {}
```
SV accuracy (URA index), not standardized.
Definition at line 41 of file sbas_ephemeris.h.

12.350.2.10 i_t0

```
int Sbas_Ephemeris::i_t0 {}
```
Reference epoch time (GPST).
Definition at line 39 of file sbas_ephemeris.h.
The documentation for this class was generated from the following file:



- sbas_ephemeris.h

12.351 sbas_l1_telemetry_decoder_gs Class Reference

This class implements a block that decodes the SBAS integrity and corrections data defined in RTCA MOPS DO-229.

`#include <sbas_l1_telemetry_decoder_gs.h>`

Inheritance diagram for sbas_l1_telemetry_decoder_gs:

Public Member Functions

- void set_satellite (const Gnss_Satellite &satellite) override

  Set satellite PRN.
- void set_channel (int32_t channel) override

  Set receiver's channel Clears all internal decoding state (buffers, aligners, Viterbi decoders) and closes the dump file, so that a channel reassigned to a different PRN never mixes messages from the previous satellite into its file.
- void reset () override
- int general_work (int noutput_items, gr_vector_int &ninput_items, gr_vector_const_void_star &input_items, gr_vector_void_star &output_items) override

  This is where all signal processing takes place.

Public Member Functions inherited from telemetry_impl_interface

- telemetry_impl_interface (const std::string &name, gr::io_signature::sptr input_signature, gr::io_signature::↩ sptr output_signature)
- virtual void set_channel (int channel)=0

Static Public Member Functions

- static std::vector< double > consume_decoded_timestamps (std::deque< double > &pending_stamps, const std::vector< double > &input_stamps, int32_t decoded_bits)

  Exposed for unit testing: appends timestamps entering a continuous decoder and returns the timestamps corresponding to the decoded bits.

Friends

- sbas_l1_telemetry_decoder_gs_sptr **sbas_l1_make_telemetry_decoder_gs** (bool dump, std::string dump_filename=std::string())

Additional Inherited Members

Protected Member Functions inherited from telemetry_impl_interface

- void **configure_basic_outputs** ()
- void **configure_dump_file** (int32_t channel, bool enable_dump, std::string &dump_filename, std::ofstream &dump_file) const
- void **configure_crc_stats_channel** (int32_t channel, bool &dump_crc_stats, std::unique_ptr< Tlm_CRC_Stats > &crc_stats) const

12.351.1 Detailed Description

This class implements a block that decodes the SBAS integrity and corrections data defined in RTCA MOPS DO-229.
Definition at line 70 of file sbas_l1_telemetry_decoder_gs.h.

12.351.2 Member Function Documentation

12.351.2.1 consume_decoded_timestamps()

```
std::vector< double > sbas_l1_telemetry_decoder_gs::consume_decoded_timestamps (
            std::deque< double > & pending_stamps,
            const std::vector< double > & input_stamps,
            int32_t decoded_bits)  [static]
```

Exposed for unit testing: appends timestamps entering a continuous decoder and returns the timestamps corresponding to the decoded bits.

12.351.2.2 general_work()

```
int sbas_l1_telemetry_decoder_gs::general_work (
            int noutput_items,
            gr_vector_int & ninput_items,
            gr_vector_const_void_star & input_items,
            gr_vector_void_star & output_items)  [override]
```

This is where all signal processing takes place.

12.351.2.3 reset()

```
void sbas_l1_telemetry_decoder_gs::reset ()  [override], [virtual]
```

Implements telemetry_impl_interface.

12.351.2.4 set_channel()

```
void sbas_l1_telemetry_decoder_gs::set_channel (
            int32_t channel)  [override]
```

Set receiver's channel Clears all internal decoding state (buffers, aligners, Viterbi decoders) and closes the dump file, so that a channel reassigned to a different PRN never mixes messages from the previous satellite into its file.

12.351.2.5 set_satellite()

```
void sbas_l1_telemetry_decoder_gs::set_satellite (
            const Gnss_Satellite & satellite)  [override], [virtual]
```

Set satellite PRN.
Implements telemetry_impl_interface.
The documentation for this class was generated from the following file:

- sbas_l1_telemetry_decoder_gs.h

12.352 Sbas_Raw_Message Class Reference

A CRC-validated 250-bit SBAS L1 frame and its receiver timestamp.
`#include <sbas_raw_message.h>`

Public Member Functions

- Sbas_Raw_Message (double sample_stamp_s, uint32_t prn, const std::vector< uint8_t > &frame)
- double sample_stamp_s () const
- uint32_t prn () const
- uint32_t message_type () const
- const std::array< uint8_t, SBAS_L1_MSG_LENGTH_BYTES > & frame () const

12.352.1 Detailed Description

A CRC-validated 250-bit SBAS L1 frame and its receiver timestamp.
The frame is stored MSB first as 32 bytes. Its six least-significant padding bits are zero. The timestamp identifies the first bit of the preamble in the receiver sample-clock time base.
Definition at line 39 of file sbas_raw_message.h.

12.352.2 Constructor & Destructor Documentation

12.352.2.1 Sbas_Raw_Message()

```
Sbas_Raw_Message::Sbas_Raw_Message (
            double sample_stamp_s,
            uint32_t prn,
            const std::vector< uint8_t > & frame)  [inline]
```

Definition at line 44 of file sbas_raw_message.h.

12.352.3 Member Function Documentation

12.352.3.1 frame()

```
const std::array< uint8_t, SBAS_L1_MSG_LENGTH_BYTES > & Sbas_Raw_Message::frame () const
[inline]
```

Definition at line 56 of file sbas_raw_message.h.

12.352.3.2 message_type()

```
uint32_t Sbas_Raw_Message::message_type () const  [inline]
```

Definition at line 55 of file sbas_raw_message.h.

12.352.3.3 prn()

```
uint32_t Sbas_Raw_Message::prn () const  [inline]
```

Definition at line 54 of file sbas_raw_message.h.

12.352.3.4 sample_stamp_s()

```
double Sbas_Raw_Message::sample_stamp_s () const  [inline]
```

Definition at line 53 of file sbas_raw_message.h.
The documentation for this class was generated from the following file:

- sbas_raw_message.h

12.353 Sbas_Rtklib_Corrections Class Reference

Maintains RTKLIB SBAS state from timestamped raw L1 messages.
`#include <sbas_rtklib_corrections.h>`

Public Member Functions

- **Sbas_Rtklib_Corrections** (int32_t selected_prn=0)

12.353.1 Detailed Description

Maintains RTKLIB SBAS state from timestamped raw L1 messages.
Raw messages use the receiver sample-clock time base. update() relates that clock to GPST at an observation epoch before passing messages to RTKLIB.
Definition at line 38 of file sbas_rtklib_corrections.h.

12.353.2 Member Function Documentation

12.353.2.1 active_prn()

```
int32_t Sbas_Rtklib_Corrections::active_prn () const  [inline]
```
Definition at line 50 of file sbas_rtklib_corrections.h.

12.353.2.2 ionosphere_corrections()

```
const sbsion_t * Sbas_Rtklib_Corrections::ionosphere_corrections () const  [inline]
```
Definition at line 53 of file sbas_rtklib_corrections.h.

12.353.2.3 pending_messages()

```
size_t Sbas_Rtklib_Corrections::pending_messages () const  [inline]
```
Definition at line 51 of file sbas_rtklib_corrections.h.

12.353.2.4 satellite_corrections()

```
const sbssat_t & Sbas_Rtklib_Corrections::satellite_corrections () const  [inline]
```
Definition at line 52 of file sbas_rtklib_corrections.h.
The documentation for this class was generated from the following file:

- sbas_rtklib_corrections.h

12.354 SbasL1DumpSession Class Reference

Public Member Functions

- **SbasL1DumpSession** (const SbasL1DumpSession &)=delete
- SbasL1DumpSession & **operator=** (const SbasL1DumpSession &)=delete
- bool open (std::ofstream &stream, const std::string &filename)

  Opens filename with truncation on first use and append on later uses. Returns true on first use; stream state reports whether opening succeeded.

12.354.1 Detailed Description

Definition at line 42 of file sbas_l1_telemetry_decoder_gs.h.

12.354.2 Member Function Documentation

12.354.2.1 open()

```
bool SbasL1DumpSession::open (
            std::ofstream & stream,
            const std::string & filename)
```
Opens filename with truncation on first use and append on later uses. Returns true on first use; stream state reports whether opening succeeded.
The documentation for this class was generated from the following file:

- sbas_l1_telemetry_decoder_gs.h

12.355 sbs_t Struct Reference

Public Attributes

- int n
- int nmax
- sbsmsg_t * msgs

12.355.1 Detailed Description

Definition at line 609 of file rtklib.h.

12.355.2 Member Data Documentation

12.355.2.1 msgs

```
sbsmsg_t* sbs_t::msgs
```

Definition at line 612 of file rtklib.h.

12.355.2.2 n

```
int sbs_t::n
```

Definition at line 611 of file rtklib.h.

12.355.2.3 nmax

```
int sbs_t::nmax
```

Definition at line 611 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.356 sbsfcorr_t Struct Reference

Public Attributes

- gtime_t t0
- double prc
- double rrc
- double dt
- int iodf
- short udre
- short ai

12.356.1 Detailed Description

Definition at line 616 of file rtklib.h.

12.356.2 Member Data Documentation

12.356.2.1 ai

```
short sbsfcorr_t::ai
```

Definition at line 624 of file rtklib.h.

12.356.2.2 dt

```
double sbsfcorr_t::dt
```

Definition at line 621 of file rtklib.h.

12.356.2.3 iodf

```
int sbsfcorr_t::iodf
```
Definition at line 622 of file rtklib.h.

12.356.2.4 prc

```
double sbsfcorr_t::prc
```
Definition at line 619 of file rtklib.h.

12.356.2.5 rrc

```
double sbsfcorr_t::rrc
```
Definition at line 620 of file rtklib.h.

12.356.2.6 t0

```
gtime_t sbsfcorr_t::t0
```
Definition at line 618 of file rtklib.h.

12.356.2.7 udre

```
short sbsfcorr_t::udre
```
Definition at line 623 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.357 sbsigp_t Struct Reference

Public Attributes

- gtime_t t0
- short lat
- short lon
- short give
- float delay

12.357.1 Detailed Description

Definition at line 655 of file rtklib.h.

12.357.2 Member Data Documentation

12.357.2.1 delay

```
float sbsigp_t::delay
```
Definition at line 660 of file rtklib.h.

12.357.2.2 give

```
short sbsigp_t::give
```
Definition at line 659 of file rtklib.h.

12.357.2.3 lat

```
short sbsigp_t::lat
```
Definition at line 658 of file rtklib.h.

12.357.2.4 lon

```
short sbsigp_t::lon
```
Definition at line 658 of file rtklib.h.

12.357.2.5 t0

```
gtime_t sbsigp_t::t0
```
Definition at line 657 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.358 sbsigpband_t Struct Reference

Public Attributes

- short x
- const short * y
- unsigned char bits
- unsigned char bite

12.358.1 Detailed Description

Definition at line 664 of file rtklib.h.

12.358.2 Member Data Documentation

12.358.2.1 bite

```
unsigned char sbsigpband_t::bite
```
Definition at line 669 of file rtklib.h.

12.358.2.2 bits

```
unsigned char sbsigpband_t::bits
```
Definition at line 668 of file rtklib.h.

12.358.2.3 x

```
short sbsigpband_t::x
```
Definition at line 666 of file rtklib.h.

12.358.2.4 y

```
const short* sbsigpband_t::y
```
Definition at line 667 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.359 sbsion_t Struct Reference

Public Attributes

- int iodi
- int nigp
- sbsigp_t igp [MAXNIGP]

12.359.1 Detailed Description

Definition at line 673 of file rtklib.h.

12.359.2 Member Data Documentation

12.359.2.1 igp

`sbsigp_t sbsion_t::igp[MAXNIGP]`
Definition at line 677 of file rtklib.h.

12.359.2.2 iodi

`int sbsion_t::iodi`
Definition at line 675 of file rtklib.h.

12.359.2.3 nigp

`int sbsion_t::nigp`
Definition at line 676 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.360 sbslcorr_t Struct Reference

Public Attributes

- gtime_t t0
- int iode
- double dpos [3]
- double dvel [3]
- double daf0
- double daf1

12.360.1 Detailed Description

Definition at line 628 of file rtklib.h.

12.360.2 Member Data Documentation

12.360.2.1 daf0

`double sbslcorr_t::daf0`
Definition at line 634 of file rtklib.h.

12.360.2.2 daf1

`double sbslcorr_t::daf1`
Definition at line 634 of file rtklib.h.

12.360.2.3 dpos

`double sbslcorr_t::dpos[3]`
Definition at line 632 of file rtklib.h.

12.360.2.4 dvel

`double sbslcorr_t::dvel[3]`
Definition at line 633 of file rtklib.h.

12.360.2.5 iode

`int sbslcorr_t::iode`
Definition at line 631 of file rtklib.h.

12.360.2.6 t0

`gtime_t sbslcorr_t::t0`
Definition at line 630 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.361 sbsmsg_t Struct Reference

Public Attributes

- int week
- int tow
- int prn
- unsigned char msg [29]

12.361.1 Detailed Description

Definition at line 601 of file rtklib.h.

12.361.2 Member Data Documentation

12.361.2.1 msg

`unsigned char sbsmsg_t::msg[29]`
Definition at line 605 of file rtklib.h.

12.361.2.2 prn

`int sbsmsg_t::prn`
Definition at line 604 of file rtklib.h.

12.361.2.3 tow

`int sbsmsg_t::tow`
Definition at line 603 of file rtklib.h.

12.361.2.4 week

`int sbsmsg_t::week`
Definition at line 603 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.362 sbssat_t Struct Reference

Public Attributes

- int iodp
- int nsat
- int tlat
- sbssatp_t sat [MAXSAT]

12.362.1 Detailed Description

Definition at line 646 of file rtklib.h.

12.362.2 Member Data Documentation

12.362.2.1 iodp

```
int sbssat_t::iodp
```

Definition at line 648 of file rtklib.h.

12.362.2.2 nsat

```
int sbssat_t::nsat
```

Definition at line 649 of file rtklib.h.

12.362.2.3 sat

```
sbssatp_t sbssat_t::sat[MAXSAT]
```

Definition at line 651 of file rtklib.h.

12.362.2.4 tlat

```
int sbssat_t::tlat
```

Definition at line 650 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.363 sbssatp_t Struct Reference

Public Attributes

- int sat
- sbsfcorr_t fcorr
- sbslcorr_t lcorr

12.363.1 Detailed Description

Definition at line 638 of file rtklib.h.

12.363.2 Member Data Documentation

12.363.2.1 fcorr

```
sbsfcorr_t sbssatp_t::fcorr
```

Definition at line 641 of file rtklib.h.

12.363.2.2 lcorr

```
sbslcorr_t sbssatp_t::lcorr
```

Definition at line 642 of file rtklib.h.

12.363.2.3 sat

```
int sbssatp_t::sat
```

Definition at line 640 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.364 sdr_gnss_packet_t Struct Reference

Classes

- struct [struct].sats

Public Attributes

- uint8_t nsvfix
- uint8_t gps_satellites
- uint8_t galileo_satellites
- uint32_t microseconds
- double latitude
- double longitude
- double height
- float velocity [3]
- struct **sats** [16]
- uint32_t reserved
- uint16_t status

12.364.1 Detailed Description

Definition at line 39 of file an_packet_printer.h.

12.364.2 Member Data Documentation

12.364.2.1 galileo_satellites

```
uint8_t sdr_gnss_packet_t::galileo_satellites
```

Definition at line 43 of file an_packet_printer.h.

12.364.2.2 gps_satellites

```
uint8_t sdr_gnss_packet_t::gps_satellites
```

Definition at line 42 of file an_packet_printer.h.

12.364.2.3 height

```
double sdr_gnss_packet_t::height
```

Definition at line 47 of file an_packet_printer.h.

12.364.2.4 latitude

```
double sdr_gnss_packet_t::latitude
```

Definition at line 45 of file an_packet_printer.h.

12.364.2.5 longitude

```
double sdr_gnss_packet_t::longitude
```

Definition at line 46 of file an_packet_printer.h.

12.364.2.6 microseconds

```
uint32_t sdr_gnss_packet_t::microseconds
```

Definition at line 44 of file an_packet_printer.h.

12.364.2.7 nsvfix

```
uint8_t sdr_gnss_packet_t::nsvfix
```

Definition at line 41 of file an_packet_printer.h.

12.364.2.8 reserved

```
uint32_t sdr_gnss_packet_t::reserved
```
Definition at line 57 of file an_packet_printer.h.

12.364.2.9 status

```
uint16_t sdr_gnss_packet_t::status
```
Definition at line 58 of file an_packet_printer.h.

12.364.2.10 velocity

```
float sdr_gnss_packet_t::velocity[3]
```
Definition at line 48 of file an_packet_printer.h.
The documentation for this struct was generated from the following file:

- an_packet_printer.h

12.365 Secure_String Class Reference

Value type for credential-bearing configuration fields.
`#include <secure_string.h>`

Public Member Functions

- Secure_String (std::string value)
- Secure_String (const char *value)
- **Secure_String** (const Secure_String &other)=default
- Secure_String (Secure_String &&other) noexcept
- Secure_String & operator= (const Secure_String &other)
- Secure_String & operator= (Secure_String &&other) noexcept
- Secure_String & operator= (std::string value)
- void clear () noexcept
- const std::string & value () const noexcept
- bool empty () const noexcept

12.365.1 Detailed Description

Value type for credential-bearing configuration fields.
Wipes its storage with volatile stores before every release - destruction, assignment, clear() - so every copy of a configuration struct that carries one scrubs itself, and a new holder of such a copy needs no manual scrub site. Assign-once usage is assumed: in-place growth of the underlying std::string is not protected.
Definition at line 39 of file secure_string.h.

12.365.2 Constructor & Destructor Documentation

12.365.2.1 Secure_String() [1/3]

```
Secure_String::Secure_String (
            std::string value)  [inline], [explicit]
```
Definition at line 44 of file secure_string.h.

12.365.2.2 Secure_String() [2/3]

```
Secure_String::Secure_String (
            const char * value)  [inline], [explicit]
```
Definition at line 51 of file secure_string.h.

12.365.2.3 Secure_String() [3/3]

```
Secure_String::Secure_String (
            Secure_String && other)  [inline], [noexcept]
```

Definition at line 55 of file secure_string.h.

12.365.2.4 ~Secure_String()

```
Secure_String::~Secure_String ()  [inline]
```

Definition at line 90 of file secure_string.h.

12.365.3 Member Function Documentation

12.365.3.1 clear()

```
void Secure_String::clear ()  [inline], [noexcept]
```

Definition at line 95 of file secure_string.h.

12.365.3.2 empty()

```
bool Secure_String::empty () const  [inline], [noexcept]
```

Definition at line 105 of file secure_string.h.

12.365.3.3 operator=() [1/3]

```
Secure_String & Secure_String::operator= (
            const Secure_String & other)  [inline]
```

Definition at line 60 of file secure_string.h.

12.365.3.4 operator=() [2/3]

```
Secure_String & Secure_String::operator= (
            Secure_String && other)  [inline], [noexcept]
```

Definition at line 70 of file secure_string.h.

12.365.3.5 operator=() [3/3]

```
Secure_String & Secure_String::operator= (
            std::string value)  [inline]
```

Definition at line 81 of file secure_string.h.

12.365.3.6 value()

```
const std::string & Secure_String::value () const  [inline], [noexcept]
```

Definition at line 100 of file secure_string.h.
The documentation for this class was generated from the following file:

- secure_string.h

12.366 IONGSMSFileSource::SegmentDescriptor Struct Reference

Public Attributes

- fs::path data_filepath
- const GnssMetadata::Block * block = nullptr
- std::size_t block_start_offset = 0
- bool block_extends_to_eof = false

12.366.1 Detailed Description

Definition at line 42 of file ion_gsms.h.

12.366.2 Member Data Documentation

12.366.2.1 block

```
const GnssMetadata::Block* IONGSMSFileSource::SegmentDescriptor::block = nullptr
```
Definition at line 45 of file ion_gsms.h.

12.366.2.2 block_extends_to_eof

```
bool IONGSMSFileSource::SegmentDescriptor::block_extends_to_eof = false
```
Definition at line 47 of file ion_gsms.h.

12.366.2.3 block_start_offset

```
std::size_t IONGSMSFileSource::SegmentDescriptor::block_start_offset = 0
```
Definition at line 46 of file ion_gsms.h.

12.366.2.4 data_filepath

```
fs::path IONGSMSFileSource::SegmentDescriptor::data_filepath
```
Definition at line 44 of file ion_gsms.h.
The documentation for this struct was generated from the following file:

- ion_gsms.h

12.367 SensorDataAggregator Class Reference

Public Member Functions

- **SensorDataAggregator** (const SensorDataSourceConfiguration &configuration, const std::vector< SensorIdentifier::value_type > &required_sensors)
- void **update** (const std::vector< gr::tag_t > &tags)
- const std::vector< SensorDataSample< float > > & **get_f32** (SensorIdentifier::value_type sensor_id) const

12.383 short_x2_to_cshort Class Reference

This class adapts two short streams into a std::complex<short> stream.
`#include <short_x2_to_cshort.h>`
Inheritance diagram for short_x2_to_cshort:

Public Member Functions

- int **work** (int noutput_items, gr_vector_const_void_star &input_items, gr_vector_void_star &output_items)

Friends

- short_x2_to_cshort_sptr **make_short_x2_to_cshort** ()

12.383.1 Detailed Description

This class adapts two short streams into a std::complex<short> stream.
Definition at line 40 of file short_x2_to_cshort.h.
The documentation for this class was generated from the following file:

- short_x2_to_cshort.h

12.384 Signal_Enabled_Flags Class Reference

Public Member Functions

- **Signal_Enabled_Flags** (const ConfigurationInterface *configuration)
- **Signal_Enabled_Flags** (uint32_t flags_)
- template<typename T>
  uint32_t or_all (const T &value) const
- template<typename T, typename... Args>
  uint32_t or_all (const T &first, const Args &... rest) const
- template<typename... Args>
  bool check_only_enabled (const Args &... args) const
- template<typename... Args>
  bool check_any_enabled (const Args &... args) const

Public Attributes

- const uint32_t flags
- const bool has_gps
- const bool has_galileo
- const bool has_glonass
- const bool has_beidou
- const bool has_qzss
- const bool only_gps
- const bool only_galileo
- const bool only_glonass
- const bool only_beidou
- const bool only_qzss

12.384.1 Detailed Description

Definition at line 25 of file signal_enabled_flags.h.

12.384.2 Member Function Documentation

12.384.2.1 check_any_enabled()

```
template<typename... Args>
bool Signal_Enabled_Flags::check_any_enabled (
            const Args &... args) const [inline]
```

Definition at line 50 of file signal_enabled_flags.h.

12.384.2.2 check_only_enabled()

```
template<typename... Args>
bool Signal_Enabled_Flags::check_only_enabled (
            const Args &... args) const [inline]
```

Definition at line 44 of file signal_enabled_flags.h.

12.384.2.3 or_all() [1/2]

```
template<typename T, typename... Args>
uint32_t Signal_Enabled_Flags::or_all (
            const T & first,
            const Args &... rest) const [inline]
```

Definition at line 38 of file signal_enabled_flags.h.

12.384.2.4 or_all() [2/2]

```
template<typename T>
uint32_t Signal_Enabled_Flags::or_all (
            const T & value) const [inline]
```

Definition at line 32 of file signal_enabled_flags.h.

12.384.3 Member Data Documentation

12.384.3.1 flags

```
const uint32_t Signal_Enabled_Flags::flags
```

Definition at line 55 of file signal_enabled_flags.h.

12.384.3.2 has_beidou

```
const bool Signal_Enabled_Flags::has_beidou
```

Definition at line 60 of file signal_enabled_flags.h.

12.384.3.3 has_galileo

`const bool Signal_Enabled_Flags::has_galileo`
Definition at line 58 of file signal_enabled_flags.h.

12.384.3.4 has_glonass

`const bool Signal_Enabled_Flags::has_glonass`
Definition at line 59 of file signal_enabled_flags.h.

12.384.3.5 has_gps

`const bool Signal_Enabled_Flags::has_gps`
Definition at line 57 of file signal_enabled_flags.h.

12.384.3.6 has_qzss

`const bool Signal_Enabled_Flags::has_qzss`
Definition at line 61 of file signal_enabled_flags.h.

12.384.3.7 only_beidou

`const bool Signal_Enabled_Flags::only_beidou`
Definition at line 66 of file signal_enabled_flags.h.

12.384.3.8 only_galileo

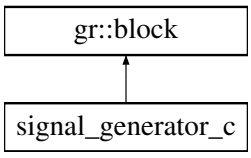
`const bool Signal_Enabled_Flags::only_galileo`
Definition at line 64 of file signal_enabled_flags.h.

12.384.3.9 only_glonass

`const bool Signal_Enabled_Flags::only_glonass`
Definition at line 65 of file signal_enabled_flags.h.

12.384.3.10 only_gps

`const bool Signal_Enabled_Flags::only_gps`
Definition at line 63 of file signal_enabled_flags.h.



12.384.3.11 only_qzss

`const bool Signal_Enabled_Flags::only_qzss`
Definition at line 67 of file signal_enabled_flags.h.
The documentation for this class was generated from the following file:

- signal_enabled_flags.h

12.385 signal_generator_c Class Reference

This class generates synthesized GNSS signal.
`#include <signal_generator_c.h>`
Inheritance diagram for signal_generator_c:

Public Member Functions

- int **general_work** (int noutput_items, gr_vector_int &ninput_items, gr_vector_const_void_star &input_items, gr_vector_void_star &output_items)

Friends

- signal_generator_c_sptr signal_make_generator_c (const std::vector< std::string > &signal1, const std::vector< std::string > &system, const std::vector< unsigned int > &PRN, const std::vector< float > &CN0_dB, const std::vector< float > &doppler_Hz, const std::vector< unsigned int > &delay_chips, const std::vector< unsigned int > &delay_sec, bool data_flag, bool noise_flag, unsigned int fs_in, unsigned int vector_length, float BW_BB)

  Return a shared_ptr to a new instance of gen_source.

12.385.1 Detailed Description

This class generates synthesized GNSS signal.

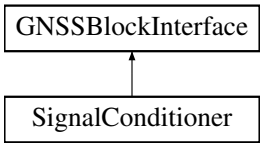
See also

gen_source for a version that subclasses gr_block.

Definition at line 58 of file signal_generator_c.h.

12.385.2 Friends And Related Symbol Documentation

12.385.2.1 signal_make_generator_c



```
signal_generator_c_sptr signal_make_generator_c (
            const std::vector< std::string > & signal1,
            const std::vector< std::string > & system,
            const std::vector< unsigned int > & PRN,
            const std::vector< float > & CN0_dB,
            const std::vector< float > & doppler_Hz,
            const std::vector< unsigned int > & delay_chips,
            const std::vector< unsigned int > & delay_sec,
            bool data_flag,
            bool noise_flag,
            unsigned int fs_in,
            unsigned int vector_length,
            float BW_BB)  [friend]
```

Return a shared_ptr to a new instance of gen_source.
To avoid accidental use of raw pointers, gen_source's constructor is private. signal_make_generator_c is the public interface for creating new instances.
The documentation for this class was generated from the following file:

- signal_generator_c.h

12.386 SignalConditioner Class Reference

This class wraps blocks to change data_type_adapter, input_filter and resampler to be applied to the input flow of sampled signal.
`#include <signal_conditioner.h>`
Inheritance diagram for SignalConditioner:

Public Member Functions

- SignalConditioner (std::shared_ptr< GNSSBlockInterface > data_type_adapt, std::shared_ptr< GNSSBlockInterface > in_filt, std::shared_ptr< GNSSBlockInterface > res, std::string role)

  Constructor.
- ~SignalConditioner ()=default

  Destructor.
- void connect (gr::top_block_sptr top_block) override
- void disconnect (gr::top_block_sptr top_block) override
- gr::basic_block_sptr get_left_block () override
- gr::basic_block_sptr get_right_block () override
- std::string role () override
- std::string implementation () override

  Returns "Signal_Conditioner".
- size_t item_size () override
- std::shared_ptr< GNSSBlockInterface > data_type_adapter ()
- std::shared_ptr< GNSSBlockInterface > input_filter ()
- std::shared_ptr< GNSSBlockInterface > resampler ()

Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

12.386.1 Detailed Description

This class wraps blocks to change data_type_adapter, input_filter and resampler to be applied to the input flow of sampled signal.
Definition at line 39 of file signal_conditioner.h.

12.386.2 Constructor & Destructor Documentation

12.386.2.1 SignalConditioner()

```
SignalConditioner::SignalConditioner (
            std::shared_ptr< GNSSBlockInterface > data_type_adapt,
            std::shared_ptr< GNSSBlockInterface > in_filt,
            std::shared_ptr< GNSSBlockInterface > res,
            std::string role)
```

Constructor.

12.386.2.2 ~SignalConditioner()

```
SignalConditioner::~SignalConditioner ()  [default]
```

Destructor.

12.386.3 Member Function Documentation

12.386.3.1 connect()

```
void SignalConditioner::connect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.386.3.2 data_type_adapter()

```
std::shared_ptr< GNSSBlockInterface > SignalConditioner::data_type_adapter ()  [inline]
```
Definition at line 62 of file signal_conditioner.h.

12.386.3.3 disconnect()

```
void SignalConditioner::disconnect (
            gr::top_block_sptr top_block)  [override], [virtual]
```
Implements GNSSBlockInterface.

12.386.3.4 get_left_block()

```
gr::basic_block_sptr SignalConditioner::get_left_block ()  [override], [virtual]
```
Implements GNSSBlockInterface.

12.386.3.5 get_right_block()

```
gr::basic_block_sptr SignalConditioner::get_right_block ()  [override], [virtual]
```
Implements GNSSBlockInterface.

12.386.3.6 implementation()

```
std::string SignalConditioner::implementation ()  [inline], [override], [virtual]
```
Returns "Signal_Conditioner".
Implements GNSSBlockInterface.
Definition at line 58 of file signal_conditioner.h.

12.386.3.7 input_filter()

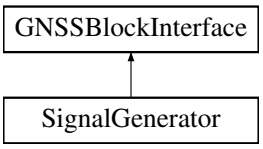
```
std::shared_ptr< GNSSBlockInterface > SignalConditioner::input_filter ()  [inline]
```
Definition at line 63 of file signal_conditioner.h.

12.386.3.8 item_size()

```
size_t SignalConditioner::item_size ()  [inline], [override], [virtual]
```
Implements GNSSBlockInterface.
Definition at line 60 of file signal_conditioner.h.

12.386.3.9 resampler()

```
std::shared_ptr< GNSSBlockInterface > SignalConditioner::resampler ()  [inline]
```
Definition at line 64 of file signal_conditioner.h.



12.386.3.10 role()

```
std::string SignalConditioner::role ()  [inline], [override], [virtual]
```
Implements GNSSBlockInterface.
Definition at line 56 of file signal_conditioner.h.
The documentation for this class was generated from the following file:

- signal_conditioner.h

12.387 SignalGenerator Class Reference

This class generates synthesized GNSS signal.
`#include <signal_generator.h>`
Inheritance diagram for SignalGenerator:

Public Member Functions

- **SignalGenerator** (const ConfigurationInterface *configuration, const std::string &role, unsigned int in_↩ stream, unsigned int out_stream, Concurrent_Queue< pmt::pmt_t > *queue)
- std::string role () override
- std::string implementation () override

  Returns "GNSSSignalGenerator".
- size_t item_size () override
- void connect (gr::top_block_sptr top_block) override
- void disconnect (gr::top_block_sptr top_block) override
- gr::basic_block_sptr get_left_block () override
- gr::basic_block_sptr get_right_block () override

Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

12.387.1 Detailed Description

This class generates synthesized GNSS signal.
Definition at line 39 of file signal_generator.h.

12.387.2 Member Function Documentation

12.387.2.1 connect()

```
void SignalGenerator::connect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.387.2.2 disconnect()

```
void SignalGenerator::disconnect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.387.2.3 get_left_block()

```
gr::basic_block_sptr SignalGenerator::get_left_block ()  [override], [virtual]
```

Implements GNSSBlockInterface.

12.387.2.4 get_right_block()

```
gr::basic_block_sptr SignalGenerator::get_right_block ()  [override], [virtual]
```

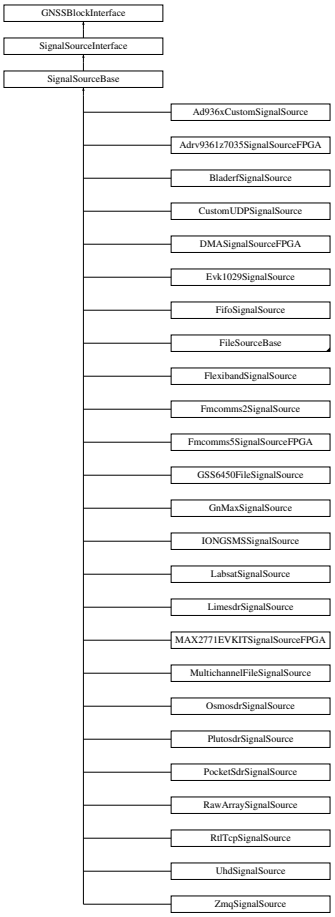
Implements GNSSBlockInterface.

12.387.2.5 implementation()

`std::string SignalGenerator::implementation () [inline], [override], [virtual]`
Returns "GNSSSignalGenerator".
Implements GNSSBlockInterface.
Definition at line 56 of file signal_generator.h.

12.387.2.6 item_size()

`size_t SignalGenerator::item_size () [inline], [override], [virtual]`
Implements GNSSBlockInterface.
Definition at line 61 of file signal_generator.h.



12.387.2.7 role()

`std::string SignalGenerator::role () [inline], [override], [virtual]`
Implements GNSSBlockInterface.
Definition at line 48 of file signal_generator.h.
The documentation for this class was generated from the following file:

- signal_generator.h

12.388 SignalSourceBase Class Reference

Inheritance diagram for SignalSourceBase:

Public Member Functions

- std::string role () final

- std::string implementation () final
- size_t getRfChannels () const override
- gr::basic_block_sptr get_left_block () override

Public Member Functions inherited from GNSSBlockInterface

- virtual size_t item_size ()=0
- virtual void connect (gr::top_block_sptr top_block)=0
- virtual void disconnect (gr::top_block_sptr top_block)=0
- virtual gr::basic_block_sptr get_right_block ()=0
- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

Protected Member Functions

- SignalSourceBase (ConfigurationInterface const *configuration, std::string role, std::string impl)

  Constructor.
- size_t decode_item_type (std::string const &item_type, bool *is_interleaved=nullptr, bool throw_on_↩ error=false)

  utility for decoding passed ".item_type" values

12.388.1 Detailed Description

Definition at line 28 of file signal_source_base.h.

12.388.2 Constructor & Destructor Documentation

12.388.2.1 SignalSourceBase()

```
SignalSourceBase::SignalSourceBase (
            ConfigurationInterface const * configuration,
            std::string role,
            std::string impl)  [protected]
```

Constructor.

12.388.3 Member Function Documentation

12.388.3.1 decode_item_type()

```
size_t SignalSourceBase::decode_item_type (
            std::string const & item_type,
            bool * is_interleaved = nullptr,
            bool throw_on_error = false)  [protected]
```

utility for decoding passed ".item_type" values

Parameters

in	*item_type*	- user provided string, should be one of the known types
out	*is_interleaved*	- if non-null, the pointed to memory is updated with whether the data is interleaved I/Q (e.g., ishort)
in	*throw_on_error*	- if true, throw an exception if the string does not represent a known type

Returns

the size in bytes of the passed type

12.388.3.2 get_left_block()

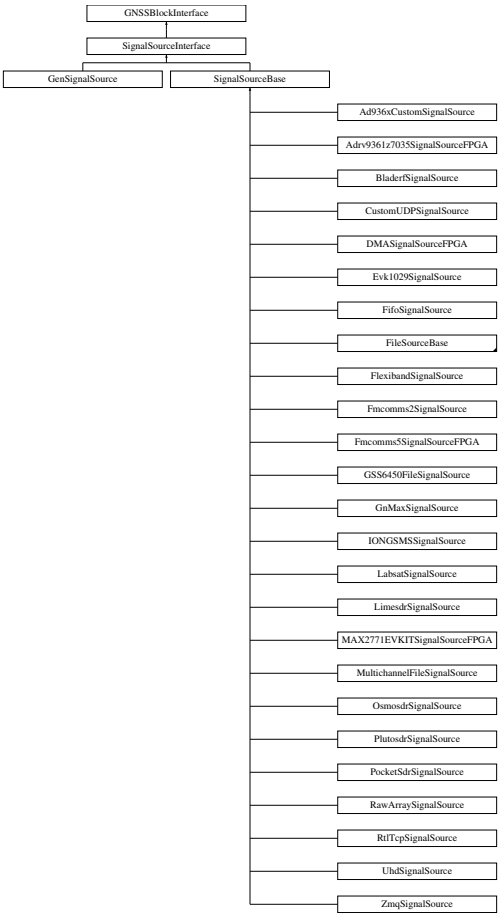
`gr::basic_block_sptr SignalSourceBase::get_left_block () [override], [virtual]`
Implements GNSSBlockInterface.

12.388.3.3 getRfChannels()

`size_t SignalSourceBase::getRfChannels () const [override], [virtual]`
Implements SignalSourceInterface.

12.388.3.4 implementation()

`std::string SignalSourceBase::implementation () [final], [virtual]`
Implements GNSSBlockInterface.



12.388.3.5 role()

`std::string SignalSourceBase::role () [final], [virtual]`
Implements GNSSBlockInterface.
The documentation for this class was generated from the following file:

- signal_source_base.h

12.389 SignalSourceInterface Class Reference

This abstract class represents an interface to signal_source GNSS block.
`#include <signal_source_interface.h>`
Inheritance diagram for SignalSourceInterface:

Public Member Functions

- virtual size_t **getRfChannels** () const =0

Public Member Functions inherited from GNSSBlockInterface

- virtual std::string role ()=0
- virtual std::string implementation ()=0
- virtual size_t item_size ()=0
- virtual void connect (gr::top_block_sptr top_block)=0
- virtual void disconnect (gr::top_block_sptr top_block)=0
- virtual gr::basic_block_sptr get_left_block ()=0
- virtual gr::basic_block_sptr get_right_block ()=0
- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

12.389.1 Detailed Description

This abstract class represents an interface to signal_source GNSS block.
Abstract class for signal sources. Since all its methods are virtual, this class cannot be instantiated directly, and a subclass can only be instantiated directly if all inherited pure virtual methods have been implemented by that class or a parent class.
Definition at line 51 of file signal_source_interface.h.
The documentation for this class was generated from the following file:

- signal_source_interface.h

12.396 SpirFileSignalSource Class Reference

Class that reads signals samples from a file and adapts it to a SignalSourceInterface.
`#include <spir_file_signal_source.h>`
Inheritance diagram for SpirFileSignalSource:

Public Member Functions

- **SpirFileSignalSource** (const ConfigurationInterface *configuration, const std::string &role, unsigned int in↩ _streams, unsigned int out_streams, Concurrent_Queue< pmt::pmt_t > *queue)

Public Member Functions inherited from FileSourceBase

- void connect (gr::top_block_sptr top_block) override
- void disconnect (gr::top_block_sptr top_block) override
- gr::basic_block_sptr get_left_block () override
- gr::basic_block_sptr get_right_block () override
- std::string filename () const

  The file to read.
- std::string item_type () const

  The item type.
- size_t item_size () override

  The configured size of each item.
- virtual size_t **item_size** () const
- bool repeat () const

  Whether to repeat reading after end-of-file.
- int64_t sampling_frequency () const

  The sampling frequency of the source file.
- uint64_t samples () const

  The number of samples in the file.

Public Member Functions inherited from SignalSourceBase

- std::string role () final
- std::string implementation () final
- size_t getRfChannels () const override
- gr::basic_block_sptr get_left_block () override

Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

Protected Member Functions

- std::tuple< size_t, bool > itemTypeToSize () override

  Compute the item size, from the item_type(). Subclasses may constrain types that don't make.
- gnss_shared_ptr< gr::block > source () const override

  Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.
- void create_file_source_hook () override
- void pre_connect_hook (gr::top_block_sptr top_block) override
- void post_disconnect_hook (gr::top_block_sptr top_block) override

Protected Member Functions inherited from FileSourceBase

- FileSourceBase (ConfigurationInterface const *configuration, std::string const &role, std::string impl, Concurrent_Queue< pmt::pmt_t > *queue, std::string default_item_type="short")

  Constructor.
- void init ()

  Perform post-construction initialization.
- virtual double packetsPerSample () const

  The number of (possibly unpacked) samples in a (raw) file sample (default=1).
- virtual uint64_t samplesToSkip () const

  Compute the number of samples to skip.
- uint64_t computeSamplesInFile () const

  Compute the number of samples in the file.
- virtual size_t source_item_size () const

  For complex source chains, the size of the file item may not be the same as the size of the.
- bool **is_complex** () const
- gnss_shared_ptr< gr::block > **file_source** () const
- gnss_shared_ptr< gr::block > **valve** () const
- gnss_shared_ptr< gr::block > **throttle** () const
- gnss_shared_ptr< gr::block > **sink** () const
- SensorDataSource::sptr **sensor_data_source** () const
- gr::blocks::file_source::sptr **create_file_source** ()
- gr::blocks::throttle::sptr **create_throttle** ()
- gnss_shared_ptr< gr::block > **create_valve** ()
- gr::blocks::file_sink::sptr **create_sink** ()
- SensorDataSource::sptr **create_sensor_data_source** ()
- virtual void **create_throttle_hook** ()
- virtual void **create_valve_hook** ()
- virtual void **create_sink_hook** ()
- virtual void **post_connect_hook** (gr::top_block_sptr top_block)
- virtual void **pre_disconnect_hook** (gr::top_block_sptr top_block)

Protected Member Functions inherited from SignalSourceBase

- SignalSourceBase (ConfigurationInterface const *configuration, std::string role, std::string impl)

  Constructor.
- size_t decode_item_type (std::string const &item_type, bool *is_interleaved=nullptr, bool throw_on_error=false)

  utility for decoding passed ".item_type" values

12.396.1 Detailed Description

Class that reads signals samples from a file and adapts it to a SignalSourceInterface.
Definition at line 40 of file spir_file_signal_source.h.

12.396.2 Member Function Documentation

12.396.2.1 create_file_source_hook()

```
void SpirFileSignalSource::create_file_source_hook ()  [override], [protected], [virtual]
```

Reimplemented from FileSourceBase.

12.396.2.2 itemTypeToSize()

```
std::tuple< size_t, bool > SpirFileSignalSource::itemTypeToSize ()  [override], [protected],
[virtual]
```

Compute the item size, from the item_type(). Subclasses may constrain types that don't make.
Reimplemented from FileSourceBase.

12.396.2.3 post_disconnect_hook()

```
void SpirFileSignalSource::post_disconnect_hook (
            gr::top_block_sptr top_block)  [override], [protected], [virtual]
```

Reimplemented from FileSourceBase.

12.396.2.4 pre_connect_hook()

```
void SpirFileSignalSource::pre_connect_hook (
            gr::top_block_sptr top_block)  [override], [protected], [virtual]
```

Reimplemented from FileSourceBase.

12.396.2.5 source()

```
gnss_shared_ptr< gr::block > SpirFileSignalSource::source () const  [override], [protected],
[virtual]
```

Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.
Reimplemented from FileSourceBase.
The documentation for this class was generated from the following file:

- spir_file_signal_source.h

12.397 ssat_t Struct Reference

12.404 Tag Class Reference

Public Types

- enum **e_verification_status** { **SUCCESS** , **FAIL** , **UNVERIFIED** , **AUTHENTICATED_DONT_USE** }

Public Member Functions

- Tag (const MACK_tag_and_info &MTI, uint32_t TOW, uint32_t WN, uint32_t PRNa, uint8_t CTR, uint8_t nmas, std::vector< uint8_t > allowed_adkds={0, 4, 12})
- Tag (const MACK_message &mack)

Public Attributes

- const uint32_t tag_id
- uint32_t TOW
- uint32_t WN
- uint32_t PRNa
- uint8_t CTR
- uint8_t nmas
- e_verification_status status
- uint64_t received_tag
- uint64_t computed_tag
- uint8_t PRN_d

- uint8_t ADKD
- uint8_t cop
- uint32_t skipped
- std::vector< uint8_t > allowed_adkds {0, 4, 12}
- std::string nav_data

Static Public Attributes

- static uint32_t id_counter

12.404.1 Detailed Description

Definition at line 251 of file osnma_data.h.

12.404.2 Member Enumeration Documentation

12.404.2.1 e_verification_status

```
enum Tag::e_verification_status
```

Definition at line 254 of file osnma_data.h.

12.404.3 Constructor & Destructor Documentation

12.404.3.1 Tag() [1/2]

```
Tag::Tag (
            const MACK_tag_and_info & MTI,
            uint32_t TOW,
            uint32_t WN,
            uint32_t PRNa,
            uint8_t CTR,
            uint8_t nmas,
            std::vector< uint8_t > allowed_adkds = {0, 4, 12})  [inline]
```

Definition at line 261 of file osnma_data.h.

12.404.3.2 Tag() [2/2]

```
Tag::Tag (
            const MACK_message & mack)  [inline], [explicit]
```

Definition at line 284 of file osnma_data.h.

12.404.4 Member Data Documentation

12.404.4.1 ADKD

```
uint8_t Tag::ADKD
```

Definition at line 312 of file osnma_data.h.

12.404.4.2 allowed_adkds

```
std::vector<uint8_t> Tag::allowed_adkds {0, 4, 12}
```

Definition at line 315 of file osnma_data.h.

12.404.4.3 computed_tag

```
uint64_t Tag::computed_tag
```

Definition at line 310 of file osnma_data.h.

12.404.4.4 cop

`uint8_t Tag::cop`
Definition at line 313 of file osnma_data.h.

12.404.4.5 CTR

`uint8_t Tag::CTR`
Definition at line 306 of file osnma_data.h.

12.404.4.6 id_counter

`uint32_t Tag::id_counter [static]`
Definition at line 302 of file osnma_data.h.

12.404.4.7 nav_data

`std::string Tag::nav_data`
Definition at line 316 of file osnma_data.h.

12.404.4.8 nmas

`uint8_t Tag::nmas`
Definition at line 307 of file osnma_data.h.

12.404.4.9 PRN_d

`uint8_t Tag::PRN_d`
Definition at line 311 of file osnma_data.h.

12.404.4.10 PRNa

`uint32_t Tag::PRNa`
Definition at line 305 of file osnma_data.h.

12.404.4.11 received_tag

`uint64_t Tag::received_tag`
Definition at line 309 of file osnma_data.h.

12.404.4.12 skipped

`uint32_t Tag::skipped`
Definition at line 314 of file osnma_data.h.

12.404.4.13 status

`e_verification_status Tag::status`
Definition at line 308 of file osnma_data.h.

12.404.4.14 tag_id

`const uint32_t Tag::tag_id`
Definition at line 301 of file osnma_data.h.

12.404.4.15 TOW

`uint32_t Tag::TOW`
Definition at line 303 of file osnma_data.h.

12.404.4.16 WN

```
uint32_t Tag::WN
```
Definition at line 304 of file osnma_data.h.
The documentation for this class was generated from the following file:

- osnma_data.h

12.405 Tcp_Communication Class Reference

TCP communication class.
`#include <tcp_communication.h>`

Public Member Functions

- int **listen_tcp_connection** (size_t d_port_, size_t d_port_ch0_)
- void **send_receive_tcp_packet_galileo_e1** (boost::array< float, NUM_TX_VARIABLES_GALILEO_E1 > buf, Tcp_Packet_Data *tcp_data_)
- void **send_receive_tcp_packet_gps_l1_ca** (boost::array< float, NUM_TX_VARIABLES_GPS_L1_CA > buf, Tcp_Packet_Data *tcp_data_)
- void **close_tcp_connection** (size_t d_port_)

12.405.1 Detailed Description

TCP communication class.
Definition at line 44 of file tcp_communication.h.
The documentation for this class was generated from the following file:

- tcp_communication.h

12.406 Tcp_Packet_Data Class Reference

Class that implements a TCP data packet.
`#include <tcp_packet_data.h>`

Public Attributes

- float proc_pack_code_error = 0.0
- float proc_pack_carr_error = 0.0
- float proc_pack_carrier_doppler_hz = 0.0

12.406.1 Detailed Description

Class that implements a TCP data packet.
Definition at line 30 of file tcp_packet_data.h.

12.406.2 Member Data Documentation

12.406.2.1 proc_pack_carr_error

```
float Tcp_Packet_Data::proc_pack_carr_error = 0.0
```
Definition at line 36 of file tcp_packet_data.h.

12.406.2.2 proc_pack_carrier_doppler_hz

```
float Tcp_Packet_Data::proc_pack_carrier_doppler_hz = 0.0
```
Definition at line 37 of file tcp_packet_data.h.

12.406.2.3 proc_pack_code_error

```
float Tcp_Packet_Data::proc_pack_code_error = 0.0
```
Definition at line 35 of file tcp_packet_data.h.
The documentation for this class was generated from the following file:

- tcp_packet_data.h

12.407 tcp_t Struct Reference

Public Attributes

- int state
- char saddr [256]
- int port
- struct sockaddr_in addr
- socket_t sock
- int tcon
- unsigned int tact
- unsigned int tdis

12.407.1 Detailed Description

Definition at line 1207 of file rtklib.h.

12.407.2 Member Data Documentation

12.407.2.1 addr

```
struct sockaddr_in tcp_t::addr
```
Definition at line 1212 of file rtklib.h.

12.407.2.2 port

```
int tcp_t::port
```
Definition at line 1211 of file rtklib.h.

12.407.2.3 saddr

```
char tcp_t::saddr[256]
```
Definition at line 1210 of file rtklib.h.

12.407.2.4 sock

```
socket_t tcp_t::sock
```
Definition at line 1213 of file rtklib.h.

12.407.2.5 state

```
int tcp_t::state
```
Definition at line 1209 of file rtklib.h.

12.407.2.6 tact

```
unsigned int tcp_t::tact
```
Definition at line 1215 of file rtklib.h.

12.407.2.7 tcon

`int tcp_t::tcon`
Definition at line 1214 of file rtklib.h.

12.407.2.8 tdis

`unsigned int tcp_t::tdis`
Definition at line 1216 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.408 tcpcli_t Struct Reference

Public Attributes

- tcp_t svr
- int toinact
- int tirecon

12.408.1 Detailed Description

Definition at line 1227 of file rtklib.h.

12.408.2 Member Data Documentation

12.408.2.1 svr

`tcp_t tcpcli_t::svr`
Definition at line 1229 of file rtklib.h.

12.408.2.2 tirecon

`int tcpcli_t::tirecon`
Definition at line 1231 of file rtklib.h.

12.408.2.3 toinact

`int tcpcli_t::toinact`
Definition at line 1230 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.409 TcpCmdInterface Class Reference

Public Member Functions

- void **run_cmd_server** (int tcp_port)
- void **set_msg_queue** (std::shared_ptr< Concurrent_Queue< pmt::pmt_t > > control_queue)
- time_t get_utc_time () const

  gets the UTC time parsed from the last TC command issued
- std::array< float, 3 > get_LLH () const

  gets the Latitude, Longitude and Altitude vector from the last TC command issued
- void **set_pvt** (std::shared_ptr< PvtInterface > PVT_sptr)

12.409.1 Detailed Description

Definition at line 41 of file tcp_cmd_interface.h.

12.409.2 Member Function Documentation

12.409.2.1 get_LLH()

`std::array< float, 3 > TcpCmdInterface::get_LLH () const`
gets the Latitude, Longitude and Altitude vector from the last TC command issued

12.409.2.2 get_utc_time()

`time_t TcpCmdInterface::get_utc_time () const`
gets the UTC time parsed from the last TC command issued
The documentation for this class was generated from the following file:

- tcp_cmd_interface.h

12.410 tcpsvr_t Struct Reference

Public Attributes

- tcp_t svr
- tcp_t cli [MAXCLI]

12.410.1 Detailed Description

Definition at line 1220 of file rtklib.h.

12.410.2 Member Data Documentation

12.410.2.1 cli

`tcp_t tcpsvr_t::cli[MAXCLI]`
Definition at line 1223 of file rtklib.h.

12.410.2.2 svr

`tcp_t tcpsvr_t::svr`
Definition at line 1222 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.411 tec_t Struct Reference

Public Attributes

- gtime_t time
- int ndata [3]
- double rb
- double lats [3]
- double lons [3]
- double hgts [3]
- double * data
- float * rms

12.411.1 Detailed Description

Definition at line 580 of file rtklib.h.

12.411.2 Member Data Documentation

12.411.2.1 data

`double* tec_t::data`
Definition at line 588 of file rtklib.h.

12.411.2.2 hgts

`double tec_t::hgts[3]`
Definition at line 587 of file rtklib.h.

12.411.2.3 lats

`double tec_t::lats[3]`
Definition at line 585 of file rtklib.h.

12.411.2.4 lons

`double tec_t::lons[3]`
Definition at line 586 of file rtklib.h.

12.411.2.5 ndata

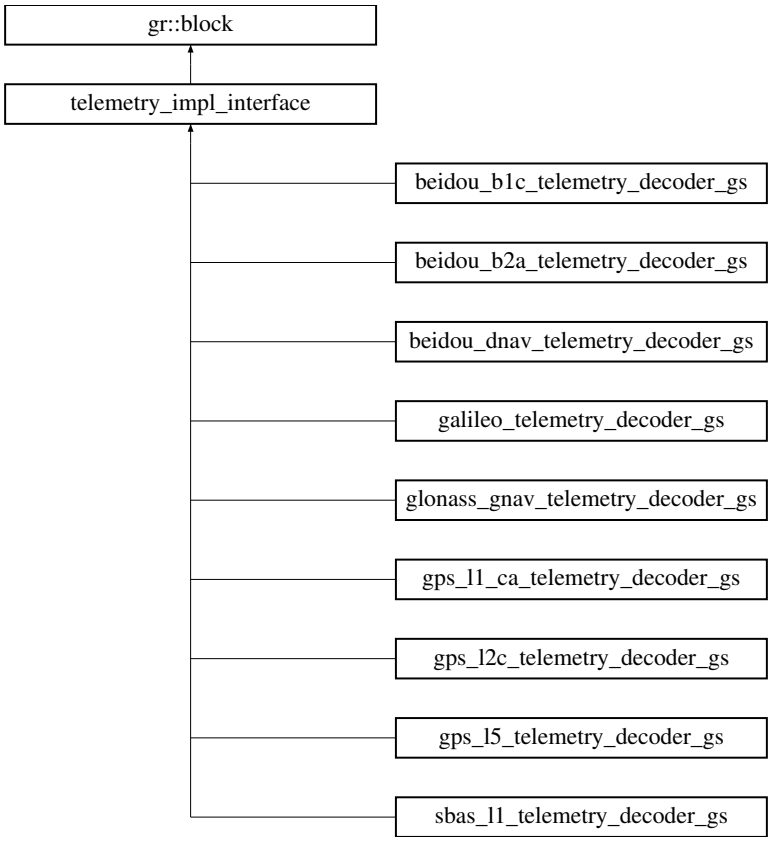
`int tec_t::ndata[3]`
Definition at line 583 of file rtklib.h.

12.411.2.6 rb

`double tec_t::rb`
Definition at line 584 of file rtklib.h.

12.411.2.7 rms

`float* tec_t::rms`
Definition at line 589 of file rtklib.h.



12.411.2.8 time

`gtime_t tec_t::time`
Definition at line 582 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.412 telemetry_impl_interface Class Reference

Common base class for telemetry decoder GNU Radio implementations.
`#include <telemetry_impl_interface.h>`
Inheritance diagram for telemetry_impl_interface:

Public Member Functions

- telemetry_impl_interface (const std::string &name, gr::io_signature::sptr input_signature, gr::io_signature::↩ sptr output_signature)
- virtual void set_satellite (const Gnss_Satellite &satellite)=0
- virtual void set_channel (int channel)=0
- virtual void reset ()=0

Protected Member Functions

- void **configure_basic_outputs** ()
- void **configure_dump_file** (int32_t channel, bool enable_dump, std::string &dump_filename, std::ofstream &dump_file) const
- void **configure_crc_stats_channel** (int32_t channel, bool &dump_crc_stats, std::unique_ptr< Tlm_CRC_Stats > &crc_stats) const

12.412.1 Detailed Description

Common base class for telemetry decoder GNU Radio implementations.
Definition at line 46 of file telemetry_impl_interface.h.

12.412.2 Constructor & Destructor Documentation

12.412.2.1 telemetry_impl_interface()

```
telemetry_impl_interface::telemetry_impl_interface (
            const std::string & name,
            gr::io_signature::sptr input_signature,
            gr::io_signature::sptr output_signature)  [inline]
```

Definition at line 49 of file telemetry_impl_interface.h.

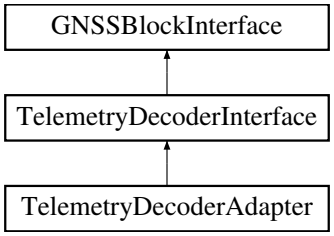
12.412.3 Member Function Documentation

12.412.3.1 reset()

```
virtual void telemetry_impl_interface::reset ()  [pure virtual]
```
Implemented in glonass_gnav_telemetry_decoder_gs.

12.412.3.2 set_channel()

```
virtual void telemetry_impl_interface::set_channel (
            int channel)  [pure virtual]
```
Implemented in beidou_dnav_telemetry_decoder_gs, and gps_l1_ca_telemetry_decoder_gs.



12.412.3.3 set_satellite()

```
virtual void telemetry_impl_interface::set_satellite (
            const Gnss_Satellite & satellite)  [pure virtual]
```
Implemented in beidou_dnav_telemetry_decoder_gs, galileo_telemetry_decoder_gs, glonass_gnav_telemetry_decoder_gs, gps_l1_ca_telemetry_decoder_gs, gps_l2c_telemetry_decoder_gs, gps_l5_telemetry_decoder_gs, and sbas_l1_telemetry_decoder_
The documentation for this class was generated from the following file:

- telemetry_impl_interface.h

12.413 TelemetryDecoderAdapter Class Reference

Base class for Telemetry Decoder adapters.
`#include <telemetry_decoder_adapter.h>`
Inheritance diagram for TelemetryDecoderAdapter:

Public Member Functions

- **TelemetryDecoderAdapter** (const std::string &role, const std::string &implementation, unsigned int in_↩ streams, unsigned int out_streams, telemetry_impl_interface_sptr decoder)
- void connect (gr::top_block_sptr top_block) override
- void disconnect (gr::top_block_sptr top_block) override
- gr::basic_block_sptr get_left_block () override
- gr::basic_block_sptr get_right_block () override
- void set_satellite (const Gnss_Satellite &satellite) override
- std::string role () override
- std::string implementation () override
- void set_channel (int channel) override
- void reset () override
- size_t item_size () override

Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

12.413.1 Detailed Description

Base class for Telemetry Decoder adapters.
Definition at line 36 of file telemetry_decoder_adapter.h.

12.413.2 Member Function Documentation

12.413.2.1 connect()

```
void TelemetryDecoderAdapter::connect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.413.2.2 disconnect()

```
void TelemetryDecoderAdapter::disconnect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.413.2.3 get_left_block()

```
gr::basic_block_sptr TelemetryDecoderAdapter::get_left_block ()  [override], [virtual]
```

Implements GNSSBlockInterface.

12.413.2.4 get_right_block()

```
gr::basic_block_sptr TelemetryDecoderAdapter::get_right_block ()  [override], [virtual]
```

Implements GNSSBlockInterface.

12.413.2.5 implementation()

```
std::string TelemetryDecoderAdapter::implementation ()  [override], [virtual]
```

Implements GNSSBlockInterface.

12.413.2.6 item_size()

```
size_t TelemetryDecoderAdapter::item_size ()  [override], [virtual]
```

Implements GNSSBlockInterface.

12.413.2.7 reset()

```
void TelemetryDecoderAdapter::reset ()  [override], [virtual]
```

Implements TelemetryDecoderInterface.

12.413.2.8 role()

```
std::string TelemetryDecoderAdapter::role ()  [override], [virtual]
```

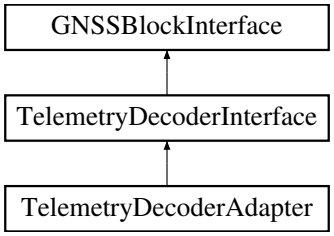
Implements GNSSBlockInterface.

12.413.2.9 set_channel()

```
void TelemetryDecoderAdapter::set_channel (
            int channel)  [override], [virtual]
```

Implements TelemetryDecoderInterface.

12.413.2.10 set_satellite()



```
void TelemetryDecoderAdapter::set_satellite (
            const Gnss_Satellite & satellite)  [override], [virtual]
```

Implements TelemetryDecoderInterface.
The documentation for this class was generated from the following file:

- telemetry_decoder_adapter.h

12.414 TelemetryDecoderInterface Class Reference

This abstract class represents an interface to a navigation GNSS block.
`#include <telemetry_decoder_interface.h>`
Inheritance diagram for TelemetryDecoderInterface:

Public Member Functions

- virtual void **reset** ()=0
- virtual void **set_satellite** (const Gnss_Satellite &sat)=0
- virtual void **set_channel** (int channel)=0

Public Member Functions inherited from GNSSBlockInterface

- virtual std::string role ()=0
- virtual std::string implementation ()=0
- virtual size_t item_size ()=0
- virtual void connect (gr::top_block_sptr top_block)=0
- virtual void disconnect (gr::top_block_sptr top_block)=0
- virtual gr::basic_block_sptr get_left_block ()=0
- virtual gr::basic_block_sptr get_right_block ()=0
- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

12.414.1 Detailed Description

This abstract class represents an interface to a navigation GNSS block.
Abstract class for navigation interfaces. Since all its methods are virtual, this class cannot be instantiated directly, and a subclass can only be instantiated directly if all inherited pure virtual methods have been implemented by that class or a parent class.
Definition at line 43 of file telemetry_decoder_interface.h.
The documentation for this class was generated from the following file:

- telemetry_decoder_interface.h

12.415 tle_t Struct Reference

Public Attributes

- int n
- int nmax
- tled_t * data

12.415.1 Detailed Description

Definition at line 573 of file rtklib.h.

12.415.2 Member Data Documentation

12.415.2.1 data

```
tled_t* tle_t::data
```
Definition at line 576 of file rtklib.h.

12.415.2.2 n

```
int tle_t::n
```
Definition at line 575 of file rtklib.h.

12.415.2.3 nmax

```
int tle_t::nmax
```
Definition at line 575 of file rtklib.h.
The documentation for this struct was generated from the following file:

- rtklib.h

12.416 tled_t Struct Reference

Public Attributes

- char name [32]
- char alias [32]
- char satno [16]
- char satclass
- char desig [16]
- gtime_t epoch
- double ndot
- double nddot
- double bstar
- int etype
- int eleno
- double inc

12.417.2.11 tow_to_trk

```
bool Tlm_Conf::tow_to_trk {false}
```
Definition at line 48 of file tlm_conf.h.

12.417.2.12 use_ced

```
bool Tlm_Conf::use_ced {false}
```
Definition at line 47 of file tlm_conf.h.
The documentation for this class was generated from the following file:

- tlm_conf.h

12.418 Tlm_CRC_Stats Class Reference

Class that computes the telemetry CRC statistics.
`#include <tlm_crc_stats.h>`

Public Member Functions

- void initialize (std::string dump_crc_stats_filename)

  Initialize the telemetry CRC statistics.
- bool set_channel (int32_t channel)

  Initialize the channel number and output file.
- void update_CRC_stats (bool CRC)

  Update the CRC statistics.

12.418.1 Detailed Description

Class that computes the telemetry CRC statistics.
Definition at line 32 of file tlm_crc_stats.h.

12.418.2 Member Function Documentation

12.418.2.1 initialize()

```
void Tlm_CRC_Stats::initialize (
            std::string dump_crc_stats_filename)
```

Initialize the telemetry CRC statistics.

12.418.2.2 set_channel()

```
bool Tlm_CRC_Stats::set_channel (
            int32_t channel)
```

Initialize the channel number and output file.

12.418.2.3 update_CRC_stats()

```
void Tlm_CRC_Stats::update_CRC_stats (
            bool CRC)
```

Update the CRC statistics.
The documentation for this class was generated from the following file:

- tlm_crc_stats.h

12.419 TOW_to_trk Class Reference

Public Member Functions

- TOW_to_trk (const std::string &sig, int32_t ch, uint32_t t, uint64_t stamp, int32_t w, uint32_t p)

Public Attributes

- std::string signal
- int32_t channel {0}
- uint32_t tow {0}
- uint64_t sample_stamp {0}
- int32_t wn {0}
- uint32_t prn {0}

12.419.1 Detailed Description

Definition at line 29 of file tow_to_trk.h.

12.419.2 Constructor & Destructor Documentation

12.419.2.1 TOW_to_trk()

```
TOW_to_trk::TOW_to_trk (
            const std::string & sig,
            int32_t ch,
            uint32_t t,
            uint64_t stamp,
            int32_t w,
            uint32_t p)  [inline]
```

Definition at line 35 of file tow_to_trk.h.

12.419.3 Member Data Documentation

12.419.3.1 channel

```
int32_t TOW_to_trk::channel {0}
```

Definition at line 39 of file tow_to_trk.h.

12.419.3.2 prn

```
uint32_t TOW_to_trk::prn {0}
```

Definition at line 43 of file tow_to_trk.h.

12.419.3.3 sample_stamp

```
uint64_t TOW_to_trk::sample_stamp {0}
```

Definition at line 41 of file tow_to_trk.h.

12.419.3.4 signal

```
std::string TOW_to_trk::signal
```

Definition at line 38 of file tow_to_trk.h.

12.419.3.5 tow

```
uint32_t TOW_to_trk::tow {0}
```

Definition at line 40 of file tow_to_trk.h.

12.419.3.6 wn

```
int32_t TOW_to_trk::wn {0}
```

Definition at line 42 of file tow_to_trk.h.
The documentation for this class was generated from the following file:

- tow_to_trk.h

12.420 Monitor_Pvt::TrackedSatelliteInfo Class Reference

One tracked satellite/signal with its azimuth/elevation, whether it was combined with another signal of the same satellite (e.g. Galileo E1+E5a iono-free combination) and whether it was used in this fix. Signals are listed individually (one entry per satellite per signal): a combined satellite appears as two entries, both with combined = true.

```
#include <monitor_pvt.h>
```

Public Member Functions

- template<class Archive>
  void serialize (Archive &ar, const unsigned int version)

Public Attributes

- uint32_t prn {}
- char system {}
- std::string signal
- double azimuth_deg {}
- double elevation_deg {}
- bool combined {}
- bool used {true}
- bool healthy {true}

12.420.1 Detailed Description

One tracked satellite/signal with its azimuth/elevation, whether it was combined with another signal of the same satellite (e.g. Galileo E1+E5a iono-free combination) and whether it was used in this fix. Signals are listed individually (one entry per satellite per signal): a combined satellite appears as two entries, both with combined = true.
Definition at line 45 of file monitor_pvt.h.

12.420.2 Member Function Documentation

12.420.2.1 serialize()

```
template<class Archive>
void Monitor_Pvt::TrackedSatelliteInfo::serialize (
            Archive & ar,
            const unsigned int version)  [inline]
```

Definition at line 62 of file monitor_pvt.h.

12.420.3 Member Data Documentation

12.420.3.1 azimuth_deg

```
double Monitor_Pvt::TrackedSatelliteInfo::azimuth_deg {}
```

Definition at line 51 of file monitor_pvt.h.

12.420.3.2 combined

```
bool Monitor_Pvt::TrackedSatelliteInfo::combined {}
```

Definition at line 53 of file monitor_pvt.h.

12.420.3.3 elevation_deg

```
double Monitor_Pvt::TrackedSatelliteInfo::elevation_deg {}
```

Definition at line 52 of file monitor_pvt.h.

12.420.3.4 healthy

```
bool Monitor_Pvt::TrackedSatelliteInfo::healthy {true}
```

Definition at line 59 of file monitor_pvt.h.

12.420.3.5 prn

```
uint32_t Monitor_Pvt::TrackedSatelliteInfo::prn {}
```

Definition at line 48 of file monitor_pvt.h.

12.420.3.6 signal

```
std::string Monitor_Pvt::TrackedSatelliteInfo::signal
```
Definition at line 50 of file monitor_pvt.h.

12.420.3.7 system

```
char Monitor_Pvt::TrackedSatelliteInfo::system {}
```
Definition at line 49 of file monitor_pvt.h.

12.420.3.8 used

```
bool Monitor_Pvt::TrackedSatelliteInfo::used {true}
```
Definition at line 56 of file monitor_pvt.h.
The documentation for this class was generated from the following file:

- monitor_pvt.h

12.421 Tracking_2nd_DLL_filter Class Reference

This class implements a 2nd order DLL filter for code tracking loop.
`#include <tracking_2nd_DLL_filter.h>`

Public Member Functions

- **Tracking_2nd_DLL_filter** (float pdi_code)
- void set_DLL_BW (float dll_bw_hz)

  Set DLL filter bandwidth [Hz].
- void set_pdi (float pdi_code)

  Set Summation interval for code [s].
- void initialize ()

  Start tracking with acquisition information.
- float get_code_nco (float DLL_discriminator)

  Numerically controlled oscillator.

12.421.1 Detailed Description

This class implements a 2nd order DLL filter for code tracking loop.
The algorithm is described in: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S. H. Jensen, A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach, Birkhauser, 2007, Applied and Numerical Harmonic Analysis.
Definition at line 40 of file tracking_2nd_DLL_filter.h.

12.421.2 Member Function Documentation

12.421.2.1 get_code_nco()

```
float Tracking_2nd_DLL_filter::get_code_nco (
            float DLL_discriminator)
```
Numerically controlled oscillator.

12.421.2.2 initialize()

```
void Tracking_2nd_DLL_filter::initialize ()
```
Start tracking with acquisition information.

12.421.2.3 set_DLL_BW()

```
void Tracking_2nd_DLL_filter::set_DLL_BW (
            float dll_bw_hz)
```

Set DLL filter bandwidth [Hz].

12.421.2.4 set_pdi()

```
void Tracking_2nd_DLL_filter::set_pdi (
            float pdi_code)
```

Set Summation interval for code [s].
The documentation for this class was generated from the following file:

- tracking_2nd_DLL_filter.h

12.422 Tracking_2nd_PLL_filter Class Reference

This class implements a 2nd order PLL filter for carrier tracking loop.
`#include <tracking_2nd_PLL_filter.h>`

Public Member Functions

- **Tracking_2nd_PLL_filter** (float pdi_carr)
- void set_PLL_BW (float pll_bw_hz)

  Set PLL loop bandwidth [Hz].
- void set_pdi (float pdi_carr)

  Set Summation interval for code [s].
- void **initialize** ()
- float **get_carrier_nco** (float PLL_discriminator)

12.422.1 Detailed Description

This class implements a 2nd order PLL filter for carrier tracking loop.
The algorithm is described in: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S. H. Jensen, A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach, Birkhauser, 2007, Applied and Numerical Harmonic Analysis.
Definition at line 39 of file tracking_2nd_PLL_filter.h.

12.422.2 Member Function Documentation

12.422.2.1 set_pdi()

```
void Tracking_2nd_PLL_filter::set_pdi (
            float pdi_carr)
```

Set Summation interval for code [s].

12.422.2.2 set_PLL_BW()

```
void Tracking_2nd_PLL_filter::set_PLL_BW (
            float pll_bw_hz)
```

Set PLL loop bandwidth [Hz].
The documentation for this class was generated from the following file:

- tracking_2nd_PLL_filter.h

12.423 Tracking_FLL_PLL_filter Class Reference

This class implements a hybrid FLL and PLL filter for tracking carrier loop.
`#include <tracking_FLL_PLL_filter.h>`

Public Member Functions

- void **set_params** (float fll_bw_hz, float pll_bw_hz, int order)
- void **initialize** (float d_acq_carrier_doppler_hz)
- float **get_carrier_error** (float FLL_discriminator, float PLL_discriminator, float correlation_time_s)

12.423.1 Detailed Description

This class implements a hybrid FLL and PLL filter for tracking carrier loop.
Definition at line 29 of file tracking_FLL_PLL_filter.h.
The documentation for this class was generated from the following file:

- tracking_FLL_PLL_filter.h

12.424 Tracking_loop_filter Class Reference

This class implements a generic 1st, 2nd or 3rd order loop filter.
`#include <tracking_loop_filter.h>`

Public Member Functions

- **Tracking_loop_filter** (float update_interval, float noise_bandwidth, int loop_order=2, bool include_last_integrator=false)
- Tracking_loop_filter (Tracking_loop_filter &&)=default
  Move operator.
- Tracking_loop_filter & operator= (Tracking_loop_filter &&)=default
  Move assignment operator.
- float **get_noise_bandwidth** () const
- float **get_update_interval** () const
- bool **get_include_last_integrator** () const
- int **get_order** () const
- void **set_noise_bandwidth** (float noise_bandwidth)
- void **set_update_interval** (float update_interval)
- void **set_include_last_integrator** (bool include_last_integrator)
- void **set_order** (int loop_order)
- void **initialize** (float initial_output=0.0)
- float **apply** (float current_input)

12.424.1 Detailed Description

This class implements a generic 1st, 2nd or 3rd order loop filter.
Definition at line 35 of file tracking_loop_filter.h.

12.424.2 Constructor & Destructor Documentation

12.424.2.1 Tracking_loop_filter()

```
Tracking_loop_filter::Tracking_loop_filter (
            Tracking_loop_filter && )  [default]
```

Move operator.

12.424.3 Member Function Documentation

12.424.3.1 operator=()

```
Tracking_loop_filter & Tracking_loop_filter::operator= (
            Tracking_loop_filter && )  [default]
```

Move assignment operator.
The documentation for this class was generated from the following file:

- tracking_loop_filter.h

12.425 TrackingCmd Class Reference

Public Attributes

- bool enable_carrier_nco_cmd = false
- bool enable_code_nco_cmd = false
- double code_freq_chips = 0.0
- double carrier_freq_hz = 0.0
- double carrier_freq_rate_hz_s = 0.0
- uint64_t sample_counter = 0UL

12.425.1 Detailed Description

Definition at line 28 of file trackingcmd.h.

12.425.2 Member Data Documentation

12.425.2.1 carrier_freq_hz

```
double TrackingCmd::carrier_freq_hz = 0.0
```

Definition at line 36 of file trackingcmd.h.

12.425.2.2 carrier_freq_rate_hz_s

```
double TrackingCmd::carrier_freq_rate_hz_s = 0.0
```

Definition at line 37 of file trackingcmd.h.

12.425.2.3 code_freq_chips

```
double TrackingCmd::code_freq_chips = 0.0
```

Definition at line 35 of file trackingcmd.h.

12.425.2.4 enable_carrier_nco_cmd

```
bool TrackingCmd::enable_carrier_nco_cmd = false
```

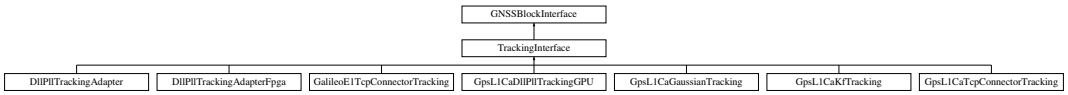
Definition at line 33 of file trackingcmd.h.

12.425.2.5 enable_code_nco_cmd

```
bool TrackingCmd::enable_code_nco_cmd = false
```

Definition at line 34 of file trackingcmd.h.

12.425.2.6 sample_counter



```
uint64_t TrackingCmd::sample_counter = 0UL
```

Definition at line 38 of file trackingcmd.h.
The documentation for this class was generated from the following file:

- trackingcmd.h

12.426 TrackingInterface Class Reference

This abstract class represents an interface to a tracking block.
`#include <tracking_interface.h>`
Inheritance diagram for TrackingInterface:

Public Member Functions

- virtual void start_tracking ()=0
- virtual void stop_tracking ()=0
- virtual void set_gnss_synchro (Gnss_Synchro *gnss_synchro)=0
- virtual void set_channel (unsigned int channel)=0

Public Member Functions inherited from GNSSBlockInterface

- virtual std::string role ()=0
- virtual std::string implementation ()=0
- virtual size_t item_size ()=0
- virtual void connect (gr::top_block_sptr top_block)=0
- virtual void disconnect (gr::top_block_sptr top_block)=0
- virtual gr::basic_block_sptr get_left_block ()=0
- virtual gr::basic_block_sptr get_right_block ()=0
- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

12.426.1 Detailed Description

This abstract class represents an interface to a tracking block.
Abstract class for tracking interfaces. Since all its methods are virtual, this class cannot be instantiated directly, and a subclass can only be instantiated directly if all inherited pure virtual methods have been implemented by that class or a parent class.
Definition at line 47 of file tracking_interface.h.

12.426.2 Member Function Documentation

12.426.2.1 set_channel()

```
virtual void TrackingInterface::set_channel (
            unsigned int channel)  [pure virtual]
```

Implemented in DllPllTrackingAdapter, GalileoE1TcpConnectorTracking, GpsL1CaDllPllTrackingGPU, GpsL1CaGaussianTracking, GpsL1CaKfTracking, and GpsL1CaTcpConnectorTracking.

12.426.2.2 set_gnss_synchro()

```
virtual void TrackingInterface::set_gnss_synchro (
            Gnss_Synchro * gnss_synchro)  [pure virtual]
```

Implemented in DllPllTrackingAdapter, GalileoE1TcpConnectorTracking, GpsL1CaDllPllTrackingGPU, GpsL1CaGaussianTracking, GpsL1CaKfTracking, and GpsL1CaTcpConnectorTracking.

12.426.2.3 start_tracking()

```
virtual void TrackingInterface::start_tracking ()  [pure virtual]
```

Implemented in DllPllTrackingAdapter.

12.426.2.4 stop_tracking()

```
virtual void TrackingInterface::stop_tracking ()  [pure virtual]
```

Implemented in DllPllTrackingAdapter, GalileoE1TcpConnectorTracking, GpsL1CaDllPllTrackingGPU, GpsL1CaGaussianTracking, GpsL1CaKfTracking, and GpsL1CaTcpConnectorTracking.

The documentation for this class was generated from the following file:

- tracking_interface.h

12.427 trop_t Struct Reference

Public Attributes

- gtime_t time
- double trp [3]
- float std [3]

12.427.1 Detailed Description

Definition at line 768 of file rtklib.h.

12.427.2 Member Data Documentation

12.427.2.1 std

```
float trop_t::std[3]
```

Definition at line 772 of file rtklib.h.

12.427.2.2 time

```
gtime_t trop_t::time
```

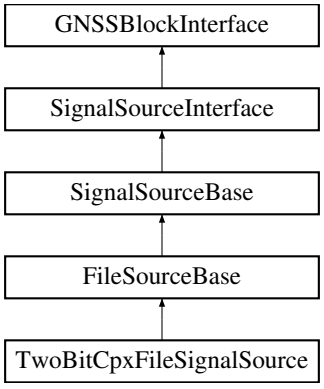
Definition at line 770 of file rtklib.h.

12.427.2.3 trp

```
double trop_t::trp[3]
```

Definition at line 771 of file rtklib.h.

The documentation for this struct was generated from the following file:



- rtklib.h

12.428 TwoBitCpxFileSignalSource Class Reference

Class that reads signals samples from a file and adapts it to a SignalSourceInterface.

```
#include <two_bit_cpx_file_signal_source.h>
```

Inheritance diagram for TwoBitCpxFileSignalSource:

Public Member Functions

- **TwoBitCpxFileSignalSource** (const ConfigurationInterface *configuration, const std::string &role, unsigned int in_streams, unsigned int out_streams, Concurrent_Queue< pmt::pmt_t > *queue)

Public Member Functions inherited from FileSourceBase

- void connect (gr::top_block_sptr top_block) override
- void disconnect (gr::top_block_sptr top_block) override
- gr::basic_block_sptr get_left_block () override
- gr::basic_block_sptr get_right_block () override
- std::string filename () const

  The file to read.
- std::string item_type () const

  The item type.
- size_t item_size () override

  The configured size of each item.
- virtual size_t **item_size** () const
- bool repeat () const

  Whether to repeat reading after end-of-file.
- int64_t sampling_frequency () const

  The sampling frequency of the source file.
- uint64_t samples () const

  The number of samples in the file.

Public Member Functions inherited from SignalSourceBase

- std::string role () final
- std::string implementation () final
- size_t getRfChannels () const override
- gr::basic_block_sptr get_left_block () override

Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

Protected Member Functions

- std::tuple< size_t, bool > itemTypeToSize () override

  Compute the item size, from the item_type(). Subclasses may constrain types that don't make.
- double packetsPerSample () const override

  The number of (possibly unpacked) samples in a (raw) file sample (default=1).
- gnss_shared_ptr< gr::block > source () const override

  Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.
- void create_file_source_hook () override
- void pre_connect_hook (gr::top_block_sptr top_block) override
- void pre_disconnect_hook (gr::top_block_sptr top_block) override

Protected Member Functions inherited from FileSourceBase

- FileSourceBase (ConfigurationInterface const *configuration, std::string const &role, std::string impl, Concurrent_Queue< pmt::pmt_t > *queue, std::string default_item_type="short")

  Constructor.
- void init ()

  Perform post-construction initialization.
- virtual uint64_t samplesToSkip () const

  Compute the number of samples to skip.
- uint64_t computeSamplesInFile () const

  Compute the number of samples in the file.
- virtual size_t source_item_size () const

  For complex source chains, the size of the file item may not be the same as the size of the.
- bool **is_complex** () const
- gnss_shared_ptr< gr::block > **file_source** () const
- gnss_shared_ptr< gr::block > **valve** () const
- gnss_shared_ptr< gr::block > **throttle** () const

- SensorDataSource::sptr **sensor_data_source** () const
- gr::blocks::file_source::sptr **create_file_source** ()
- gr::blocks::throttle::sptr **create_throttle** ()
- gnss_shared_ptr< gr::block > **create_valve** ()
- gr::blocks::file_sink::sptr **create_sink** ()
- SensorDataSource::sptr **create_sensor_data_source** ()
- virtual void **create_throttle_hook** ()
- virtual void **create_valve_hook** ()
- virtual void **create_sink_hook** ()
- virtual void **post_connect_hook** (gr::top_block_sptr top_block)
- virtual void **post_disconnect_hook** (gr::top_block_sptr top_block)

Protected Member Functions inherited from SignalSourceBase

- SignalSourceBase (ConfigurationInterface const *configuration, std::string role, std::string impl)

  Constructor.
- size_t decode_item_type (std::string const &item_type, bool *is_interleaved=nullptr, bool throw_on_↩ error=false)

  utility for decoding passed ".item_type" values

12.428.1 Detailed Description

Class that reads signals samples from a file and adapts it to a SignalSourceInterface.
Definition at line 42 of file two_bit_cpx_file_signal_source.h.

12.428.2 Member Function Documentation

12.428.2.1 create_file_source_hook()

```
void TwoBitCpxFileSignalSource::create_file_source_hook ()  [override], [protected], [virtual]
```

Reimplemented from FileSourceBase.

12.428.2.2 itemTypeToSize()

```
std::tuple< size_t, bool > TwoBitCpxFileSignalSource::itemTypeToSize ()  [override], [protected],
[virtual]
```

Compute the item size, from the item_type(). Subclasses may constrain types that don't make.
Reimplemented from FileSourceBase.

12.428.2.3 packetsPerSample()

```
double TwoBitCpxFileSignalSource::packetsPerSample () const  [override], [protected], [virtual]
```

The number of (possibly unpacked) samples in a (raw) file sample (default=1).
Reimplemented from FileSourceBase.

12.428.2.4 pre_connect_hook()

```
void TwoBitCpxFileSignalSource::pre_connect_hook (
            gr::top_block_sptr top_block)  [override], [protected], [virtual]
```

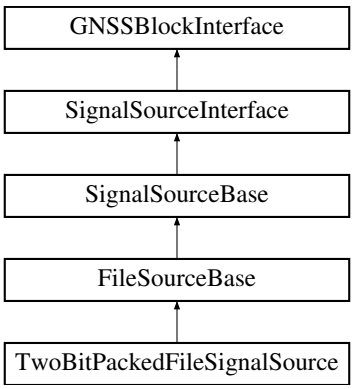
Reimplemented from FileSourceBase.

12.428.2.5 pre_disconnect_hook()

```
void TwoBitCpxFileSignalSource::pre_disconnect_hook (
            gr::top_block_sptr top_block)  [override], [protected], [virtual]
```

Reimplemented from FileSourceBase.

12.428.2.6 source()



```
gnss_shared_ptr< gr::block > TwoBitCpxFileSignalSource::source () const  [override], [protected],
[virtual]
```

Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.
Reimplemented from FileSourceBase.
The documentation for this class was generated from the following file:

- two_bit_cpx_file_signal_source.h

12.429 TwoBitPackedFileSignalSource Class Reference

Class that reads signals samples from a file and adapts it to a SignalSourceInterface.
`#include <two_bit_packed_file_signal_source.h>`
Inheritance diagram for TwoBitPackedFileSignalSource:

Public Member Functions

- **TwoBitPackedFileSignalSource** (const ConfigurationInterface *configuration, const std::string &role, unsigned int in_streams, unsigned int out_streams, Concurrent_Queue< pmt::pmt_t > *queue)

12.429.1 Detailed Description

Class that reads signals samples from a file and adapts it to a SignalSourceInterface.
Definition at line 44 of file two_bit_packed_file_signal_source.h.

12.429.2 Member Function Documentation

12.429.2.1 create_file_source_hook()

```
void TwoBitPackedFileSignalSource::create_file_source_hook ()  [override], [protected], [virtual]
```

Reimplemented from FileSourceBase.

12.429.2.2 itemTypeToSize()

```
std::tuple< size_t, bool > TwoBitPackedFileSignalSource::itemTypeToSize ()  [override], [protected],
[virtual]
```

Compute the item size, from the item_type(). Subclasses may constrain types that don't make.
Reimplemented from FileSourceBase.

12.429.2.3 packetsPerSample()

```
double TwoBitPackedFileSignalSource::packetsPerSample () const  [override], [protected], [virtual]
```

The number of (possibly unpacked) samples in a (raw) file sample (default=1).
Reimplemented from FileSourceBase.

12.429.2.4 pre_connect_hook()

```
void TwoBitPackedFileSignalSource::pre_connect_hook (
            gr::top_block_sptr top_block)  [override], [protected], [virtual]
```

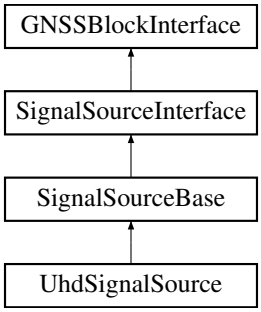
Reimplemented from FileSourceBase.

12.429.2.5 pre_disconnect_hook()

```
void TwoBitPackedFileSignalSource::pre_disconnect_hook (
            gr::top_block_sptr top_block)  [override], [protected], [virtual]
```

Reimplemented from FileSourceBase.

12.429.2.6 source()



```
gnss_shared_ptr< gr::block > TwoBitPackedFileSignalSource::source () const  [override], [protected],
[virtual]
```

Abstracted front-end source. Sub-classes may override if they create specialized chains to decode source files into a usable format.
Reimplemented from FileSourceBase.
The documentation for this class was generated from the following file:

- two_bit_packed_file_signal_source.h

12.430 UhdSignalSource Class Reference

This class reads samples from a UHD device (see http://code.ettus.com/redmine/ettus/↩ projects/uhd/wiki).
`#include <uhd_signal_source.h>`
Inheritance diagram for UhdSignalSource:

Public Member Functions

- **UhdSignalSource** (const ConfigurationInterface *configuration, const std::string &role, unsigned int in_↩ stream, unsigned int out_stream, Concurrent_Queue< pmt::pmt_t > *queue)

- std::string implementation () final
- size_t getRfChannels () const override

Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

Additional Inherited Members

Protected Member Functions inherited from SignalSourceBase

- SignalSourceBase (ConfigurationInterface const *configuration, std::string role, std::string impl)

  Constructor.
- size_t decode_item_type (std::string const &item_type, bool *is_interleaved=nullptr, bool throw_on_error=false)

  utility for decoding passed ".item_type" values

12.430.1 Detailed Description

This class reads samples from a UHD device (see http://code.ettus.com/redmine/ettus/projects/uhd/wiki).
Definition at line 41 of file uhd_signal_source.h.

12.430.2 Member Function Documentation

12.430.2.1 connect()

```
void UhdSignalSource::connect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.430.2.2 disconnect()

```
void UhdSignalSource::disconnect (
            gr::top_block_sptr top_block)  [override], [virtual]
```

Implements GNSSBlockInterface.

12.430.2.3 get_left_block()

```
gr::basic_block_sptr UhdSignalSource::get_left_block ()  [override], [virtual]
```

Reimplemented from SignalSourceBase.

12.430.2.4 get_right_block() [1/2]

```
gr::basic_block_sptr UhdSignalSource::get_right_block ()  [override], [virtual]
```

Implements GNSSBlockInterface.

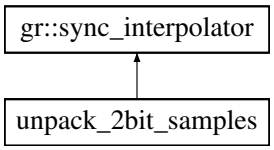
12.430.2.5 get_right_block() [2/2]

```
gr::basic_block_sptr UhdSignalSource::get_right_block (
            int RF_channel)  [override], [virtual]
```

Reimplemented from GNSSBlockInterface.

12.430.2.6 item_size()

```
size_t UhdSignalSource::item_size ()  [inline], [override], [virtual]
```



Implements GNSSBlockInterface.

12.437 unpack_ntlab_2bit_samples Class Reference

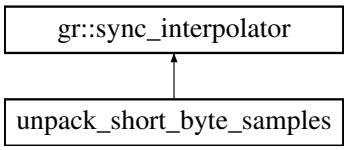
This class implements conversion between byte packet multichannel samples to 2bit samples 1 byte = 4 2bit samples.
`#include <unpack_ntlab_2bit_samples.h>`
Inheritance diagram for unpack_ntlab_2bit_samples:

Public Member Functions

- **unpack_ntlab_2bit_samples** (size_t item_size, int nchannels)
- int **work** (int noutput_items, gr_vector_const_void_star &input_items, gr_vector_void_star &output_items)

Friends

- unpack_ntlab_2bit_samples_sptr **make_unpack_ntlab_2bit_samples_sptr** (size_t item_size, int nchannels)



12.437.1 Detailed Description

This class implements conversion between byte packet multichannel samples to 2bit samples 1 byte = 4 2bit samples.
Unpack each of the four 2-bit samples in the byte 'b' into four real-valued outputs.
The NTLAB format encodes samples as sign+magnitude pairs in each byte: bits 7-6 = [M0 S0] -> sample 0 bits 5-4 = [M1 S1] -> sample 1 bits 3-2 = [M2 S2] -> sample 2 bits 1-0 = [M3 S3] -> sample 3
M = magnitude bit (1->|sample|=3, 0->|sample|=1) S = sign bit (1->positive, 0->negative)
Definition at line 56 of file unpack_ntlab_2bit_samples.h.
The documentation for this class was generated from the following file:

12.444 Viterbi_Decoder Class Reference

Class that implements a Viterbi decoder.

```
#include <viterbi_decoder.h>
```

Public Member Functions

- Viterbi_Decoder (int32_t KK, int32_t nn, int32_t LL, const std::array< int32_t, 2 > &g)

  Constructor of a Viterbi decoder.
- void decode (std::vector< int32_t > &output_u_int, const std::vector< float > &input_c)

  Uses the Viterbi algorithm to perform soft-decision decoding of a convolutional code.
- void reset ()

  Reset internal status.

12.444.1 Detailed Description

Class that implements a Viterbi decoder.
Definition at line 35 of file viterbi_decoder.h.

12.444.2 Constructor & Destructor Documentation

12.444.2.1 Viterbi_Decoder()

```
Viterbi_Decoder::Viterbi_Decoder (
            int32_t KK,
            int32_t nn,
            int32_t LL,
            const std::array< int32_t, 2 > & g)
```

Constructor of a Viterbi decoder.

Parameters

in	*KK*	Constraint length
in	*nn*	Coding rate 1/n
in	*LL*	Data length
in	*g*	Polynomial G1 and G2

12.444.3 Member Function Documentation

12.444.3.1 decode()

```
void Viterbi_Decoder::decode (
            std::vector< int32_t > & output_u_int,
            const std::vector< float > & input_c)
```

Uses the Viterbi algorithm to perform soft-decision decoding of a convolutional code.

Parameters

out	*output_u_int*	Hard decisions on the decoded data bits.
in	*input_c*	Soft input metrics.

12.444.3.2 reset()

```
void Viterbi_Decoder::reset ()
```

Reset internal status.
The documentation for this class was generated from the following file:

- viterbi_decoder.h

12.445 Viterbi_Decoder_Sbas Class Reference

Class that implements a Viterbi decoder.
`#include <viterbi_decoder_sbas.h>`

Public Member Functions

- **Viterbi_Decoder_Sbas** (const int g_encoder[ ], int KK, int nn)
- void **reset** ()
- float decode_block (const double input_c[ ], int ∗output_u_int, int LL)

  Uses the Viterbi algorithm to perform hard-decision decoding of a convolutional code.
- float **decode_continuous** (const double sym[ ], int traceback_depth, int bits[ ], int nbits_requested, int &nbits_decoded)

12.445.1 Detailed Description

Class that implements a Viterbi decoder.
Definition at line 34 of file viterbi_decoder_sbas.h.

12.445.2 Member Function Documentation

12.445.2.1 decode_block()

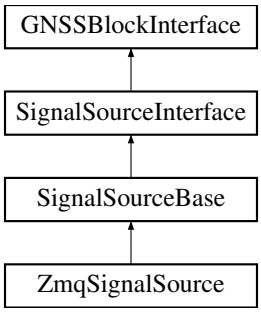
```
float Viterbi_Decoder_Sbas::decode_block (
            const double input_c[],
            int * output_u_int,
            int LL)
```

Uses the Viterbi algorithm to perform hard-decision decoding of a convolutional code.

Parameters

in	*input_c[]*	The received signal in LLR-form. For BPSK, must be in form r = 2∗a∗y/(sigma^2).
in	*LL*	The number of data bits to be decoded (does not include the mm zero-tail-bits)

Returns



output_u_int[] Hard decisions on the data bits (without the mm zero-tail-bits)

The documentation for this class was generated from the following file:

- viterbi_decoder_sbas.h

12.446 ZmqSignalSource Class Reference

This class supports the following properties:
`#include <zmq_signal_source.h>`
Inheritance diagram for ZmqSignalSource:

Public Member Functions

- **ZmqSignalSource** (const ConfigurationInterface *configuration, const std::string &role, unsigned int in_↩ stream, unsigned int out_stream, Concurrent_Queue< pmt::pmt_t > *queue)
- size_t item_size () override
- auto connect (gr::top_block_sptr top_block) -> void override
- auto disconnect (gr::top_block_sptr top_block) -> void override
- auto get_right_block () -> gr::basic_block_sptr override

Public Member Functions inherited from SignalSourceBase

- std::string role () final
- std::string implementation () final
- size_t getRfChannels () const override
- gr::basic_block_sptr get_left_block () override

Public Member Functions inherited from GNSSBlockInterface

- virtual gr::basic_block_sptr get_left_block (int RF_channel)
- virtual gr::basic_block_sptr get_right_block (int RF_channel)
- virtual void start ()

  Start the flow of samples if needed.

Additional Inherited Members

Protected Member Functions inherited from SignalSourceBase

- SignalSourceBase (ConfigurationInterface const *configuration, std::string role, std::string impl)

  Constructor.
- size_t decode_item_type (std::string const &item_type, bool *is_interleaved=nullptr, bool throw_on_↩ error=false)

  utility for decoding passed ".item_type" values

12.446.1 Detailed Description

This class supports the following properties:
.endpoint - the ZMQ endpoint to be connected to .vlen - vector length of the input items (default 1, one item) this must match the size of the publisher! .pass_tags - boolean flag if tags should be propagated (default false) .timeout_ms - receive timeout, in milliseconds (default 100) .hwm - ZMQ high water mark (default -1, ZMQ default)
.item_type - data type of the samples (default "gr_complex")
(probably should be abstracted to the base class)
.dump - whether to archive input data .dump_filename - if dumping, path to file for output
Definition at line 51 of file zmq_signal_source.h.

12.446.2 Member Function Documentation

12.446.2.1 connect()

```
auto ZmqSignalSource::connect (
            gr::top_block_sptr top_block) -> void  [override], [virtual]
```

Implements GNSSBlockInterface.

12.446.2.2 disconnect()

```
auto ZmqSignalSource::disconnect (
            gr::top_block_sptr top_block) -> void  [override], [virtual]
```

Implements GNSSBlockInterface.

12.446.2.3 get_right_block()

```
auto ZmqSignalSource::get_right_block () -> gr::basic_block_sptr  [override], [virtual]
```

Implements GNSSBlockInterface.

12.446.2.4 item_size()

```
size_t ZmqSignalSource::item_size ()  [override], [virtual]
```

Implements GNSSBlockInterface.

The documentation for this class was generated from the following file:

Classes

- class acquisition_impl_interface

  This abstract class represents an interface to an acquisition GNSS block.

Typedefs

- using acquisition_impl_interface_sptr = gnss_shared_ptr<acquisition_impl_interface>

13.6.1 Detailed Description

Header file of the interface to an acquisition implementation GNSS block.

Author

Mathieu Favraeu, 2025. favreau.mathieu(at)hotmail.com

This header file contains the interface to an abstract class for acquisition algorithms. Since all its methods are virtual, this class cannot be instantiated directly, and a subclass can only be instantiated directly if all inherited pure virtual methods have been implemented by that class or a parent class.

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

Classes

- class pcps_acquisition

  This class implements a Parallel Code Phase Search Acquisition.

Typedefs

- using pcps_acquisition_sptr = gnss_shared_ptr<pcps_acquisition>

Functions

- pcps_acquisition_sptr **pcps_make_acquisition** (const Acq_Conf &conf_)

13.12.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition.
Acquisition strategy (Kay Borre book + CFAR threshold).

1. Compute the input signal power estimation
2. Doppler serial search loop
3. Perform the FFT-based circular convolution (parallel time search)
4. Record the maximum peak and the associated synchronization parameters
5. Compute the test statistics and compare to the threshold
6. Declare positive or negative acquisition using a message queue

Kay Borre book: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, "A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach", Birkhauser, 2007. pp 81-84

Classes

- class pcps_acquisition_fine_doppler_cc

  This class implements a Parallel Code Phase Search Acquisition.

Typedefs

- using pcps_acquisition_fine_doppler_cc_sptr = gnss_shared_ptr<pcps_acquisition_fine_doppler_cc>

Functions

- pcps_acquisition_fine_doppler_cc_sptr **pcps_make_acquisition_fine_doppler_cc** (const Acq_Conf &conf_)

13.14.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with multi-dwells and fine Doppler estimation for GPS L1 C/A signal.
Acquisition strategy (Kay Borre book).

1. Compute the input signal power estimation
2. Doppler serial search loop
3. Perform the FFT-based circular convolution (parallel time search)
4. Record the maximum peak and the associated synchronization parameters
5. Compute the test statistics and compare to the threshold
6. Declare positive or negative acquisition using a message port

Kay Borre book: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, "A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach", Birkhauser, 2007. pp 81-84

13.18.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with assistance and multi-dwells.
Acquisition strategy (Kay Borre book + CFAR threshold).

1. Compute the input signal power estimation
2. Doppler serial search loop
3. Perform the FFT-based circular convolution (parallel time search)
4. Record the maximum peak and the associated synchronization parameters
5. Compute the test statistics and compare to the threshold
6. Declare positive or negative acquisition using a message queue

Kay Borre book: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, "A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach", Birkhauser, 2007. pp 81-84

13.22.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition using OpenCL to offload some functions to the GPU.
Acquisition strategy (Kay Borre book + CFAR threshold).

1. Compute the input signal power estimation
2. Doppler serial search loop
3. Perform the FFT-based circular convolution (parallel time search)
4. Record the maximum peak and the associated synchronization parameters
5. Compute the test statistics and compare to the threshold
6. Declare positive or negative acquisition using a message port

Kay Borre book: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, "A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach", Birkhauser, 2007. pp 81-84

Classes

- class pcps_quicksync_acquisition_cc

  This class implements a Parallel Code Phase Search Acquisition with the implementation of the Sparse QuickSync Algorithm.

Typedefs

- using pcps_quicksync_acquisition_cc_sptr = gnss_shared_ptr<pcps_quicksync_acquisition_cc>

Functions

- pcps_quicksync_acquisition_cc_sptr **pcps_quicksync_make_acquisition_cc** (const Acq_Conf &conf, uint32_t folding_factor, uint32_t max_dwells)

13.24.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with the QuickSync Algorithm.
Acquisition strategy (Kay Borre book CFAR + threshold).

1. Compute the input signal power estimation
2. Doppler serial search loop
3. Perform folding of the incoming signal and local generated code
4. Perform the FFT-based circular convolution (parallel time search)
5. Record the maximum peak and the associated synchronization parameters
6. Compute the test statistics and compare to the threshold
7. Declare positive or negative acquisition using a message port
8. Obtain the adequate acquisition parameters by correlating the incoming signal shifted by the possible folded delays

Kay Borre book: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, "A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach", Birkha user, 2007. pp 81-84

Functions

- pcps_tong_acquisition_cc_sptr **pcps_tong_make_acquisition_cc** (const Acq_Conf &conf, uint32_t tong↩ _init_val, uint32_t tong_max_val, uint32_t tong_max_dwells)

13.26.1 Detailed Description

This class implements a Parallel Code Phase Search Acquisition with Tong algorithm.

Author

Marc Molina, 2013. marc.molina.pena(at)gmail.com

Acquisition strategy (Kaplan book + CFAR threshold).

1. Compute the input signal power estimation.
2. Doppler serial search loop.
3. Perform the FFT-based circular convolution (parallel time search).

4. Compute the tests statistics for all the cells.
5. Accumulate the grid of tests statistics with the previous grids.
6. Record the maximum peak and the associated synchronization parameters.
7. Compare the maximum averaged test statistics with a threshold.
8. If the test statistics exceeds the threshold, increment the Tong counter.
9. Otherwise, decrement the Tong counter.
10. If the Tong counter is equal to a given maximum value, declare positive
11. acquisition. If the Tong counter is equa to zero, declare negative
12. acquisition. Otherwise, process the next block.

GPU (CUDA + cuFFT) implementation of the Parallel Code Phase Search grid.

```
#include <complex>
#include <cstdint>
#include <memory>
#include <string>
```

Classes

- class CudaPcpsEngine

  Batched PCPS grid evaluation on a CUDA device.

13.32.1 Detailed Description

GPU (CUDA + cuFFT) implementation of the Parallel Code Phase Search grid.

Author

Phillip Vu, 2026. phillipvu(at)users.noreply.github.com

Computes, for a batch of Doppler bins, the squared magnitude of the circular cross-correlation between the carrier-wiped input and the local code, using batched FFTs on an NVIDIA GPU. It is the GPU counterpart of the inner loop of pcps_acquisition::doppler_grid(). The public interface deliberately contains no CUDA types so that it can be consumed from plain C++ translation units; the implementation lives in cuda_pcps_engine.cu.

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

00039  * \brief Batched PCPS grid evaluation on a CUDA device.
00040  *
00041  * Typical usage (mirrors pcps_acquisition):
00042  *   1. Construct with the FFT geometry of the acquisition block.
00043  *   2. set_doppler_wipeoffs() whenever the Doppler grid changes.
00044  *   3. set_fft_codes() whenever the local code (PRN) changes.
00045  *   4. compute_grid() once per dwell; the magnitude grid is written to the
00046  *      host rows supplied by the caller, so the existing CPU peak-search and
00047  *      statistics code can be reused unchanged.
00048  *
00049  * Each instance owns a CUDA stream, so several channels acquiring at the same
00050  * time run their grids concurrently on the device.
00051  */

Classes

- class Channel

  This class represents a GNSS channel. It wraps an AcquisitionInterface, a TrackingInterface and a TelemetryDecoderInterface, and handles their interaction through a Finite State Machine.

13.36.1 Detailed Description

Interface of a GNSS channel.

Author

Carlos Aviles, 2010. carlos.avilesr(at)googlemail.com Luis Esteve, 2011. luis(at)epsilon-formacion.com

It holds blocks for acquisition, tracking, navigation data extraction and pseudorange calculation.
GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.
Copyright (C) 2010-2020 (see AUTHORS file for a list of contributors) SPDX-License-Identifier: GPL-3.0-or-later

13.80 beamformer.h File Reference

Simple spatial filter using RAW array input and beamforming coefficients.

```
#include "gnss_block_interface.h"
#include <gnuradio/sync_block.h>
#include <vector>
```

Classes

- class beamformer

  This class implements a real-time software-defined spatial filter using the CTTC GNSS experimental antenna array input and a set of dynamically reloadable weights.

Typedefs

- using beamformer_sptr = gnss_shared_ptr<beamformer>

Functions

- beamformer_sptr **make_beamformer_sptr** ()

Variables

- const int GNSS_SDR_BEAMFORMER_CHANNELS = 8

13.80.1 Detailed Description

Simple spatial filter using RAW array input and beamforming coefficients.

13.90 beidou_b1i_signal_replica.h File Reference

This file implements various functions for BeiDou B1I signal replica generation.

```
#include <complex>
#include <cstdint>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void beidou_b1i_code_gen_int (own::span< int32_t > dest, int32_t prn, uint32_t chip_shift)

  Generates int32_t GPS L1 C/A code for the desired SV ID and code shift.
- void beidou_b1i_code_gen_float (own::span< float > dest, int32_t prn, uint32_t chip_shift)

  Generates float GPS L1 C/A code for the desired SV ID and code shift.
- void beidou_b1i_code_gen_complex (own::span< std::complex< float > > dest, int32_t prn, uint32_t chip↩ _shift)

  Generates complex GPS L1 C/A code for the desired SV ID and code shift.
- void beidou_b1i_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq, uint32_t chip_shift)

  Generates complex GPS L1 C/A code for the desired SV ID and code shift, and sampled to specific sampling frequency.

13.112 galileo_e1_signal_replica.h File Reference

This library implements various functions for Galileo E1 signal replica generation.

```
#include <array>
#include <complex>
#include <cstdint>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void galileo_e1_code_gen_sinboc11_float (own::span< float > dest, const std::array< char, 3 > &signal_id, uint32_t prn)

  This function generates Galileo E1 code (can select E1B or E1C sinboc).

- void galileo_e1_code_gen_float_sampled (own::span< float > dest, const std::array< char, 3 > &signal_id, bool cboc, uint32_t prn, int32_t sampling_freq, uint32_t chip_shift, bool secondary_flag)

This function generates Galileo E1 code (can select E1B or E1C, cboc or sinboc and the sample frequency sampling↩ _freq).

- void galileo_e1_code_gen_float_sampled (own::span< float > dest, const std::array< char, 3 > &signal_id, bool cboc, uint32_t prn, int32_t sampling_freq, uint32_t chip_shift)

  This function generates Galileo E1 code (can select E1B or E1C, cboc or sinboc and the sample frequency sampling↩ _freq).

- void galileo_e1_code_gen_complex_sampled (own::span< std::complex< float > > dest, const std::array< char, 3 > &signal_id, bool cboc, uint32_t prn, int32_t sampling_freq, uint32_t chip_shift, bool secondary_flag)

  This function generates Galileo E1 code (can select E1B or E1C, cboc or sinboc and the sample frequency sampling↩ _freq).

- void galileo_e1_code_gen_complex_sampled (own::span< std::complex< float > > dest, const std::array< char, 3 > &signal_id, bool cboc, uint32_t prn, int32_t sampling_freq, uint32_t chip_shift)

  galileo_e1_code_gen_complex_sampled without secondary_flag for backward compatibility.

13.112.1 Detailed Description

This library implements various functions for Galileo E1 signal replica generation.

13.114 galileo_e5_signal_replica.h File Reference

This library implements various functions for Galileo E5 signal replica generation.

```
#include <array>
#include <complex>
#include <cstdint>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void galileo_e5_a_code_gen_complex_primary (own::span< std::complex< float > > dest, int32_t prn, const std::array< char, 3 > &signal_id)

  Generates Galileo E5a code at 1 sample/chip.

- void galileo_e5_a_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, const std::array< char, 3 > &signal_id, int32_t sampling_freq, uint32_t chip_shift)

  Generates Galileo E5a complex code, shifted to the desired chip and sampled at a frequency sampling_freq.

- void galileo_e5_b_code_gen_complex_primary (own::span< std::complex< float > > dest, int32_t prn, const std::array< char, 3 > &signal_id)

  Generates Galileo E5b code at 1 sample/chip.

- void galileo_e5_b_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, const std::array< char, 3 > &signal_id, int32_t sampling_freq, uint32_t chip_shift)

  Generates Galileo E5b complex code, shifted to the desired chip and sampled at a frequency sampling_freq.

13.114.1 Detailed Description

13.116 galileo_e6_signal_replica.h File Reference

This library implements various functions for Galileo E6 signal replica generation.

```
#include <array>
#include <complex>
#include <cstdint>
#include <string>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void galileo_e6_b_code_gen_complex_primary (own::span< std::complex< float > > dest, int32_t prn)

  Generates Galileo E6B code at 1 sample/chip.
- void galileo_e6_b_code_gen_float_primary (own::span< float > dest, int32_t prn)

  Generates Galileo E6B code at 1 sample/chip.
- void galileo_e6_b_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq, uint32_t chip_shift)

  Generates Galileo E6B complex code, shifted to the desired chip and sampled at a frequency sampling_freq.
- void galileo_e6_c_code_gen_complex_primary (own::span< std::complex< float > > dest, int32_t prn)

  Generates Galileo E6C codes at 1 sample/chip.
- void galileo_e6_c_code_gen_float_primary (own::span< float > dest, int32_t prn)

  Generates Galileo E6C codes at 1 sample/chip.
- void galileo_e6_c_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq, uint32_t chip_shift)

  Generates Galileo E6C complex codes, shifted to the desired chip and sampled at a frequency sampling_freq.
- void galileo_e6_c_secondary_code_gen_complex (own::span< std::complex< float > > dest, int32_t prn)

  Generates Galileo E6C secondary codes at 1 sample/chip.
- void galileo_e6_c_secondary_code_gen_float (own::span< float > dest, int32_t prn)

  Generates Galileo E6C secondary codes at 1 sample/chip.
- std::string galileo_e6_c_secondary_code (int32_t prn)

  Generates a string with Galileo E6C secondary codes at 1 sample/chip.

13.118 geofunctions.h File Reference

A set of coordinate transformations functions and helpers, some of them migrated from MATLAB, for geographic information systems.

```
#include <armadillo>
```

Functions

- arma::mat Skew_symmetric (const arma::vec &a)

  Calculates skew-symmetric matrix.
- double **WGS84_g0** (double Lat_rad)
- double **WGS84_geocentric_radius** (double Lat_geodetic_rad)
- int topocent (double *Az, double *El, double *D, const arma::vec &x, const arma::vec &dx)

  Transformation of vector dx into topocentric coordinate system with origin at x Inputs: x - vector origin coordinates (in ECEF system [X; Y; Z;]) dx - vector ([dX; dY; dZ;]).
- int togeod (double *dphi, double *dlambda, double *h, double a, double finv, double X, double Y, double Z)

  Subroutine to calculate geodetic coordinates latitude, longitude, height given Cartesian coordinates X,Y,Z, and reference ellipsoid values semi-major axis (a) and the inverse of flattening (finv).
- arma::vec Gravity_ECEF (const arma::vec &r_eb_e)

  Calculates acceleration due to gravity resolved about ECEF-frame.
- arma::vec cart2geo (const arma::vec &XYZ, int elipsoid_selection)

  Conversion of Cartesian coordinates (X,Y,Z) to geographical coordinates (latitude, longitude, h) on a selected reference ellipsoid.
- arma::vec **LLH_to_deg** (const arma::vec &LLH)
- double **degtorad** (double angleInDegrees)
- double **radtodeg** (double angleInRadians)
- double **mstoknotsh** (double MetersPerSeconds)
- double **mstokph** (double MetersPerSeconds)
- arma::vec **CTM_to_Euler** (const arma::mat &C)
- arma::mat **Euler_to_CTM** (const arma::vec &eul)
- void **ECEF_to_Geo** (const arma::vec &r_eb_e, const arma::vec &v_eb_e, const arma::mat &C_b_e, arma::↩ vec &LLH, arma::vec &v_eb_n, arma::mat &C_b_n)
- void Geo_to_ECEF (const arma::vec &LLH, const arma::vec &v_eb_n, const arma::mat &C_b_n, arma::vec &r_eb_e, arma::vec &v_eb_e, arma::mat &C_b_e)

  From Geographic to ECEF coordinates.
- void pv_Geo_to_ECEF (double L_b, double lambda_b, double h_b, const arma::vec &v_eb_n, arma::vec &r_eb_e, arma::vec &v_eb_e)

Converts curvilinear to Cartesian position and velocity resolving axes from NED to ECEF This function created 11/↩ 4/2012 by Paul Groves.

- double great_circle_distance (double lat1, double lon1, double lat2, double lon2)

  The Haversine formula determines the great-circle distance between two points on a sphere given their longitudes and latitudes.
- void cart2utm (const arma::vec &r_eb_e, int zone, arma::vec &r_enu)

  Transformation of ECEF (X,Y,Z) to (E,N,U) in UTM, zone 'zone'.
- int findUtmZone (double latitude_deg, double longitude_deg)

  Function finds the UTM zone number for given longitude and latitude.
- double clsin (const arma::colvec &ar, int degree, double argument)

  Clenshaw summation of sinus of argument.
- void clksin (const arma::colvec &ar, int degree, double arg_real, double arg_imag, double *re, double *im)

  Clenshaw summation of sinus with complex argument.

13.118.1 Detailed Description

A set of coordinate transformations functions and helpers, some of them migrated from MATLAB, for geographic information systems.

```

Functions

- void glonass_l2_ca_code_gen_complex (own::span< std::complex< float > > dest, uint32_t chip_shift)

  Generates complex GLONASS L2 C/A code for the desired SV ID and code shift.
- void glonass_l2_ca_code_gen_float (own::span< float > dest, uint32_t chip_shift)

  Generates float GLONASS L2 C/A code for the desired SV ID and code shift.
- void glonass_l2_ca_code_gen_complex_sampled (own::span< std::complex< float > > dest, int32_t sampling_freq, uint32_t chip_shift)

  Generates complex GLONASS L2 C/A code for the desired SV ID and code shift, and sampled to specific sampling frequency.

13.131 gnss_sdr_flags.h File Reference

Helper file for gnss-sdr commandline flags.

```
#include <cstdint>
#include <string>
#include <absl/flags/declare.h>
#include <absl/flags/flag.h>
#include <cstdlib>
#include <iostream>
#include <sys/stat.h>
#include <vector>
```

Functions

- ABSL_DECLARE_FLAG (std::string, c)

  Path to the configuration file.
- ABSL_DECLARE_FLAG (std::string, config_file)

  Path to the configuration file.
- ABSL_DECLARE_FLAG (std::string, log_dir)

  Path to the folder in which logging will be stored.
- ABSL_DECLARE_FLAG (std::string, s)

  Path to the file containing the signal samples.
- ABSL_DECLARE_FLAG (std::string, signal_source)

  Path to the file containing the signal samples.
- ABSL_DECLARE_FLAG (std::string, timestamp_source)

  Path to the file containing the signal samples.
- ABSL_DECLARE_FLAG (bool, rf_shutdown)

  Shutdown RF when program exits.
- ABSL_DECLARE_FLAG (int32_t, doppler_max)

  If defined, maximum Doppler value in the search grid, in Hz (overrides the configuration file).
- ABSL_DECLARE_FLAG (int32_t, doppler_step)

  If defined, sets the frequency step in the search grid, in Hz, in Hz (overrides the configuration file).
- ABSL_DECLARE_FLAG (int32_t, cn0_samples)

  Number of correlator outputs used for CN0 estimation.
- ABSL_DECLARE_FLAG (int32_t, cn0_min)

  Minimum valid CN0 (in dB-Hz).
- ABSL_DECLARE_FLAG (int32_t, max_lock_fail)

  Maximum number of code lock failures before dropping a satellite.
- ABSL_DECLARE_FLAG (int32_t, max_carrier_lock_fail)

  Maximum number of carrier lock failures before dropping a satellite.
- ABSL_DECLARE_FLAG (double, carrier_lock_th)

  Carrier lock threshold (in rad).
- ABSL_DECLARE_FLAG (double, dll_bw_hz)

  Bandwidth of the DLL low pass filter, in Hz (overrides the configuration file).
- ABSL_DECLARE_FLAG (double, pll_bw_hz)

  Bandwidth of the PLL low pass filter, in Hz (overrides the configuration file).
- ABSL_DECLARE_FLAG (int32_t, carrier_smoothing_factor)

  Sets carrier smoothing factor M (overrides the configuration file).
- ABSL_DECLARE_FLAG (std::string, RINEX_version)

  If defined, specifies the RINEX version (2.11 or 3.02). Overrides the configuration file.
- ABSL_DECLARE_FLAG (std::string, RINEX_name)

  If defined, specifies the RINEX files base name.
- ABSL_DECLARE_FLAG (bool, keyboard)

  If set to false, disables the keyboard listener. Only for debug purposes (e.g. ASAN mode termination).
- bool **ValidateFlags** ()

Variables

- const int32_t DEFAULT_CARRIER_SMOOTHING_FACTOR = 200

13.137 gnss_signal_replica.h File Reference

This library gathers a few functions used for GNSS signal replica generation regardless of system used.

```
#include <complex>
#include <cstdint>
#include <string>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void complex_exp_gen (own::span< std::complex< float > > dest, double freq, double sampling_freq)

  This function generates a complex exponential in dest.
- void complex_exp_gen_conj (own::span< std::complex< float > > dest, double freq, double sampling_freq)

  This function generates a conjugate complex exponential in dest.
- void hex_to_binary_converter (own::span< int32_t > dest, char from)

  This function makes a conversion from hex (the input is a char) to binary (the output are 4 ints with +1 or -1 values).
- std::string hex_to_binary_string (char from)

  This function makes a conversion from hex (the input is a char) to binary (the output is a string of 4 char with 0 or 1 values).
- void resampler (const own::span< float > from, own::span< float > dest, float fs_in, float fs_out)

  This function resamples a sequence of float values.
- void resampler (own::span< const std::complex< float > > from, own::span< std::complex< float > > dest, float fs_in, float fs_out)

  This function resamples a sequence of complex values.

13.141 gps_l2c_signal_replica.h File Reference

This file implements signal generators for GPS L2C signals.

```
#include <complex>
#include <cstdint>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void gps_l2c_m_code_gen_complex (own::span< std::complex< float > > dest, uint32_t prn)

  Generates complex GPS L2C M code for the desired SV ID.
- void gps_l2c_m_code_gen_float (own::span< float > dest, uint32_t prn)

  Generates float GPS L2C M code for the desired SV ID.
- void gps_l2c_m_code_gen_float_cl_zeroed (own::span< float > dest, uint32_t prn)

  Generates float GPS L2C M code with double chip rate and L component zeroed for the desired SV ID.
- void gps_l2c_m_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq)

  Generates complex GPS L2C M code for the desired SV ID, and sampled to specific sampling frequency.
- void gps_l2c_m_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq, bool cl_zeroed)

  Generates complex GPS L2C M code for the desired SV ID, and sampled to specific sampling frequency, optionally zeroing CL slots.

13.143 gps_l5_signal_replica.h File Reference

This file implements signal generators for GPS L5 signals.

```
#include <complex>
#include <cstdint>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void gps_l5i_code_gen_complex (own::span< std::complex< float > > dest, uint32_t prn)

  Generates complex GPS L5I code for the desired SV ID.
- void gps_l5i_code_gen_float (own::span< float > dest, uint32_t prn)

  Generates real GPS L5I code for the desired SV ID.
- void gps_l5q_code_gen_complex (own::span< std::complex< float > > dest, uint32_t prn)

  Generates complex GPS L5Q code for the desired SV ID.
- void gps_l5q_code_gen_float (own::span< float > dest, uint32_t prn)

  Generates real GPS L5Q code for the desired SV ID.
- void gps_l5i_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq)

  Generates complex GPS L5I code for the desired SV ID, and sampled to specific sampling frequency.
- void gps_l5q_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq)

  Generates complex GPS L5Q code for the desired SV ID, and sampled to specific sampling frequency.

13.145 gps_sdr_signal_replica.h File Reference

This file implements functions for GPS L1 C/A signal replica generation.

```
#include <complex>
#include <cstdint>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void gps_l1_ca_code_gen_int (own::span< int32_t > dest, int32_t prn, uint32_t chip_shift)

  Generates int GPS L1 C/A code for the desired SV ID and code shift.
- void gps_l1_ca_code_gen_float (own::span< float > dest, int32_t prn, uint32_t chip_shift)

  Generates float GPS L1 C/A code for the desired SV ID and code shift.
- void gps_l1_ca_code_gen_complex (own::span< std::complex< float > > dest, int32_t prn, uint32_t chip↩_shift)

  Generates complex GPS L1 C/A code for the desired SV ID and code shift.
- void gps_l1_ca_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq, uint32_t chip_shift)

  Generates complex GPS L1 C/A code for the desired SV ID and code shift, and sampled to specific sampling frequency.

13.147 item_type_helpers.h File Reference

Utility functions for converting between item types.

```
#include <cstdint>
#include <functional>
#include <string>
```

Typedefs

- using item_type_converter_t = std::function<void(void *, const void *, uint32_t)>

Functions

- bool item_type_valid (const std::string &item_type)

  Check if a string is a valid item type.
- size_t item_type_size (const std::string &item_type)

  Return the size of the given item type, or zero if unknown.
- bool item_type_is_complex (const std::string &item_type)

  Determine if an item_type is complex.
- item_type_converter_t make_vector_converter (const std::string &input_type, const std::string &output_type)

  Create a function to convert an array of input_type to an array of output_type.

Classes

- class Pass_Through

  This class implements a block that connects input and output (does nothing).

13.157.1 Detailed Description

Interface of a block that just puts its input in its output.

13.159 qzss_signal_replica.h File Reference

This file implements signal generators for QZSS signals.

```
#include <complex>
#include <cstdint>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- bool qzss_l1_code_is_boc (uint32_t prn)

  Returns true if the given QZSS PRN broadcasts the BOC(1,1)-modulated L1 C/B signal (IS-QZSS-PNT-006).
- void qzss_l1_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq)

  Generates complex QZSS L1 C/A(B) code for the desired SV ID, and sampled to specific sampling frequency.
- void qzss_l1_code_gen_float (own::span< float > dest, uint32_t prn)

  Generates real QZSS L1 C/A(B) code for the desired SV ID (QZSS_L1_SAMPLES_PER_CHIP samples per chip).
- void qzss_l5i_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq)

  Generates complex QZSS L5I code for the desired SV ID, and sampled to specific sampling frequency.
- void qzss_l5i_code_gen_float (own::span< float > dest, uint32_t prn)

  Generates real QZSS L5I code for the desired SV ID.
- void qzss_l5q_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq)

  Generates complex QZSS L5Q code for the desired SV ID, and sampled to specific sampling frequency.
- void qzss_l5q_code_gen_float (own::span< float > dest, uint32_t prn)

  Generates real QZSS L5I code for the desired SV ID.

13.159.1 Detailed Description

This file implements signal generators for QZSS signals.

Typedefs

- using fatalfunc_t = void(const char *)

  fatal callback function type
- typedef struct half_cyc_tag **half_cyc_t**

Functions

- double sysefact (int sys)

  Measurement error factor of a navigation system (single home of the sys-to-EFACT mapping used by the single-point, relative and PPP error models).

Variables

- const int TINTACT = 200

  period for stream active (ms)
- const int SERIBUFFSIZE = 4096

  serial buffer size (bytes)
- const int TIMETAGH_LEN = 64

  time tag file header length
- const int MAXCLI = 32

  max client connection for tcp svr
- const int MAXSTATMSG = 32

  max length of status message
- const int FTP_TIMEOUT = 30

  ftp/http timeout (s)
- const int MAXRAWLEN = 4096

  max length of receiver raw message
- const int MAXSOLBUF = 256

  max number of solution buffer
- const int MAXSBSMSG = 32

  max number of SBAS msg in RTK server
- const int MAXOBSBUF = 128

  max number of observation data buffer
- const int FILEPATHSEP = '/'
- const double RE_WGS84 = 6378137.0

  earth semimajor axis (WGS84) (m)
- const double FE_WGS84 = (1.0 / 298.257223563)

  earth flattening (WGS84)
- const double HION = 350000.0

  ionosphere height (m)
- const double PRN_HWBIAS = 1e-6

  process noise of h/w bias (m/MHz/sqrt(s))
- const double INT_SWAP_STAT = 86400.0

  swap interval of solution status file (s)
- const double INT_SWAP_TRAC = 86400.0

  swap interval of trace file (s)
- const unsigned int POLYCRC32 = 0xEDB88320u

  CRC32 polynomial.
- const unsigned int POLYCRC24Q = 0x1864CFBu

  CRC24Q polynomial.
- const int PMODE_SINGLE = 0

  positioning mode: single

- const int PMODE_DGPS = 1
  positioning mode: DGPS/DGNSS
- const int PMODE_KINEMA = 2

13.173.2 Macro Definition Documentation

13.173.2.1 MIN_PPP

```
#define MIN_PPP(
                x,
                y)
```

Value:

```
((x) <= (y) ? (x) : (y))
```

Definition at line 40 of file rtklib_ppp.h.

13.173.2.2 ROUND_PPP

```
#define ROUND_PPP(
                x)
```

Value:

```
static_cast<int>(floor((x) + 0.5))
```

Definition at line 41 of file rtklib_ppp.h.

13.173.2.3 SWAP_D

```
#define SWAP_D(
                x,
                y)
```

Value:

```
do                      \
    {                   \
        double _z = x;  \
        x = y;          \
        y = _z;         \
    }                   \
while (0)
```

Definition at line 51 of file rtklib_ppp.h.

13.173.2.4 SWAP_I

```
#define SWAP_I(
                x,
                y)
```

Value:

```
do                  \
    {               \
```

```
        int _z = x; \
        x = y;      \
        y = _z;     \
    }               \
while (0)
```

Definition at line 43 of file rtklib_ppp.h.

13.173.3 Variable Documentation

13.173.3.1 CONST_AMB

```
const double CONST_AMB = 0.001
```

Definition at line 61 of file rtklib_ppp.h.

13.173.3.2 LOG_PI

```
const double LOG_PI = 1.14472988584940017
```

Definition at line 63 of file rtklib_ppp.h.

13.173.3.3 MIN_ARC_GAP

```
const double MIN_ARC_GAP = 300.0
```

Definition at line 60 of file rtklib_ppp.h.

13.173.3.4 SQRT2

```
const double SQRT2 = 1.41421356237309510
```

Definition at line 64 of file rtklib_ppp.h.

13.173.3.5 THRES_RES

```
const double THRES_RES = 0.3
```

Definition at line 62 of file rtklib_ppp.h.

13.173.3.6 VAR_BIAS

```
const double VAR_BIAS = std::pow(100.0, 2.0)
```

Definition at line 70 of file rtklib_ppp.h.

13.173.3.7 VAR_CLK

```
const double VAR_CLK = std::pow(100.0, 2.0)
```

Definition at line 67 of file rtklib_ppp.h.

13.173.3.8 VAR_GRA_PPP

```
const double VAR_GRA_PPP = std::pow(0.001, 2.0)
```

Definition at line 69 of file rtklib_ppp.h.

13.173.3.9 VAR_IONO_OFF

```
const double VAR_IONO_OFF = std::pow(10.0, 2.0)
```

Definition at line 72 of file rtklib_ppp.h.

13.173.3.10 VAR_POS_PPP

```
const double VAR_POS_PPP = std::pow(100.0, 2.0)
```

Definition at line 66 of file rtklib_ppp.h.

13.173.3.11 VAR_ZTD

```
const double VAR_ZTD = std::pow(0.3, 2.0)
```

Definition at line 68 of file rtklib_ppp.h.

13.181.2 Variable Documentation

13.181.2.1 CODES_BDS

```
const int CODES_BDS[]
```

Initial value:

```
= {
CODE_L2I, CODE_L2Q, CODE_L2X, CODE_L7I, CODE_L7Q, CODE_L7X, CODE_L6I, CODE_L6Q,
CODE_L6X}
```

Definition at line 73 of file rtklib_rtcm3.h.

13.181.2.2 CODES_GAL

```
const int CODES_GAL[]
```

Initial value:

```
                = {
CODE_L1A, CODE_L1B, CODE_L1C, CODE_L1X, CODE_L1Z, CODE_L5I, CODE_L5Q, CODE_L5X,
CODE_L7I, CODE_L7Q, CODE_L7X, CODE_L8I, CODE_L8Q, CODE_L8X, CODE_L6A, CODE_L6B,
CODE_L6C, CODE_L6X, CODE_L6Z}
```

Definition at line 62 of file rtklib_rtcm3.h.

13.181.2.3 CODES_GLO

```
const int CODES_GLO[]
```

Initial value:

```
                = {
CODE_L1C, CODE_L1P, CODE_L2C, CODE_L2P}
```

Definition at line 58 of file rtklib_rtcm3.h.

13.181.2.4 CODES_GPS

```
const int CODES_GPS[]
```

Initial value:

```
                = {
CODE_L1C, CODE_L1P, CODE_L1W, CODE_L1Y, CODE_L1M, CODE_L2C, CODE_L2D, CODE_L2S,
CODE_L2L, CODE_L2X, CODE_L2P, CODE_L2W, CODE_L2Y, CODE_L2M, CODE_L5I, CODE_L5Q,
CODE_L5X}
```

Definition at line 52 of file rtklib_rtcm3.h.

13.181.2.5 CODES_QZS

```
const int CODES_QZS[]
```

Initial value:

```
                = {
CODE_L1C, CODE_L1S, CODE_L1L, CODE_L2S, CODE_L2L, CODE_L2X, CODE_L5I, CODE_L5Q,
CODE_L5X, CODE_L6S, CODE_L6L, CODE_L6X, CODE_L1X}
```

Definition at line 68 of file rtklib_rtcm3.h.

13.181.2.6 CODES_SBS

```
const int CODES_SBS[]
```

Initial value:

```
                = {
CODE_L1C, CODE_L5I, CODE_L5Q, CODE_L5X}
```

Definition at line 78 of file rtklib_rtcm3.h.

13.181.2.7 PRUNIT_GLO

```
const double PRUNIT_GLO = 599584.916
```

Definition at line 42 of file rtklib_rtcm3.h.

13.181.2.8 PRUNIT_GPS

```
const double PRUNIT_GPS = 299792.458
```

Definition at line 41 of file rtklib_rtcm3.h.

13.181.2.9 RANGE_MS

```
const double RANGE_MS = SPEED_OF_LIGHT_M_S * 0.001
```

Definition at line 43 of file rtklib_rtcm3.h.

13.181.2.10 SSRUDINT

```
const double SSRUDINT[16]
```

Initial value:

```
                = {
1, 2, 5, 10, 15, 30, 60, 120, 240, 300, 600, 900, 1800, 3600, 7200, 10800}
```

Definition at line 47 of file rtklib_rtcm3.h.

13.183.2 Macro Definition Documentation

13.183.2.1 Rx

```
#define Rx(
                t,
                X)
```

Value:

```
do                                                  \
    {                                               \
        (X)[0] = 1.0;                               \
        (X)[1] = (X)[2] = (X)[3] = (X)[6] = 0.0;    \
        (X)[4] = (X)[8] = cos(t);                   \
        (X)[7] = sin(t);                            \
        (X)[5] = -(X)[7];                           \
    }                                               \
while (0)
```

Definition at line 85 of file rtklib_rtkcmn.h.

13.183.2.2 Ry

```
#define Ry(
                t,
                X)
```

Value:

```
do                                                  \
    {                                               \
        (X)[4] = 1.0;                               \
        (X)[1] = (X)[3] = (X)[5] = (X)[7] = 0.0;    \
        (X)[0] = (X)[8] = cos(t);                   \
        (X)[2] = sin(t);                            \
        (X)[6] = -(X)[2];                           \
    }                                               \
```

```
while (0)
```

Definition at line 96 of file rtklib_rtkcmn.h.

13.183.2.3 Rz

```
#define Rz(
              t,
              X)
```

Value:

```
do                                                  \
    {                                               \
        (X)[8] = 1.0;                               \
        (X)[2] = (X)[5] = (X)[6] = (X)[7] = 0.0;    \
        (X)[0] = (X)[4] = cos(t);                   \
        (X)[3] = sin(t);                            \
        (X)[1] = -(X)[3];                           \
    }                                               \
while (0)
```

13.201 sbas_signal_replica.h File Reference

This file implements signal generators for SBAS L1 signals.

```
#include <complex>
#include <cstdint>
#include <gsl-lite/gsl-lite.hpp>
```

Functions

- void sbas_l1_code_gen_complex_sampled (own::span< std::complex< float > > dest, uint32_t prn, int32_t sampling_freq)

  Generates complex SBAS L1 C/A code for the desired SV PRN, sampled at sampling_freq [Hz].
- void sbas_l1_code_gen_float (own::span< float > dest, uint32_t prn)

  Generates real SBAS L1 C/A code for the desired SV PRN (chip_shift=0).
- void sbas_l1_code_gen_complex (own::span< std::complex< float > > dest, uint32_t prn, uint32_t chip_shift)

  Generates complex SBAS L1 C/A code for the desired SV PRN with a given chip_shift.

13.201.1 Detailed Description

This file implements signal generators for SBAS L1 signals.

Author

Miguel Gómez López, 2026. mgomezl(at)ing.uc3m.es

Víctor Castillo Agüero, 2026. victorcastilloaguero(at)gmail.com

SBAS PRN codes (120–138) share the same Gold-code generator as GPS L1 C/A but use SBAS-specific G2 initial state delays. The underlying code generator already handles SBAS PRNs; these wrappers provide a clean SBAS-specific API.

Reference: RTCA DO-229E, Appendix A

Classes

- class hybrid_observables_gs

  This class implements a block that computes observables.

Typedefs

- using hybrid_observables_gs_sptr = gnss_shared_ptr<hybrid_observables_gs>

Functions

- hybrid_observables_gs_sptr **hybrid_observables_gs_make** (const Obs_Conf &conf_)

13.223.1 Detailed Description

Interface of the observables computation block.

Author

00047  *
00048  * Global configuration options used:
00049  *
00050  * GNSS-SDR.observation_date - approximate date of the signal capture in YYYY-MM-DD or YYYY format,
      used to resolve the GPS mod-1024 week-number rollover when post-processing recorded files (empty:
      derive it from the system clock)
00051  * GNSS-SDR.pre_2009_file - deprecated, use GNSS-SDR.observation_date instead; flag indicating a file
      captured in the Aug 1999 - Apr 2019 week-number era (false)
00052  * GNSS-SDR.observable_interval_ms - (20)
00053  *
00054  * It supports the following configuration options:
00055  *
00056  *  .dump - (false)
00057  *  .dump_filename - ("./pvt.dat")
00058  *  .dump_mat - (true)
00059  *  .rtk_trace_level - debug level for the RTKLIB methods (0)
00060  *
00061  *  .output_rate_ms - (500)
00062  *                    Note that the actual rate is the least common multiple of this value and
      GNSS-SDR.observable_interval_ms
00063  *  .display_rate_ms - (500)
00064  *
00065  *  .flag_nmea_tty_port - (false)
00066  *  .nmea_dump_filename - ("./nmea_pvt.nmea")
00067  *  .nmea_dump_devname - ("/dev/tty1")
00068  *
00069  *  .rinex_version - (3) values 2 (2.11), 3 (3.02) or 4 (4.02), overridden by -RINEX_version=n.nn
      command line argument
00070  *  .rinexobs_rate_ms - rate at which RINEX observations are written (1000).  Note that
00071  *                      the actual rate is the least common multiple of this value and
00072  *                      .output_rate_ms
00073  *  .rinex_name - (-RINEX_name command-line argument)
00074  *
00075  *  .flag_rtcm_tty_port - (false)
00076  *  .rtcm_dump_devname - ("/dev/pts/1")
00077  *  .flag_rtcm_server - (false)
00078  *  .rtcm_tcp_port - (2101)
00079  *  .rtcm_station_id - (1234)
00080  * Output rates ... all values are LCM with the computed output rate (above)
00081  *  .rtcm_MT1019_rate_ms - (5000)
00082  *  .rtcm_MT1020_rate_ms - (5000)
00083  *  .rtcm_MT1045_rate_ms - (5000)
00084  *  .rtcm_MSM_rate_ms - (1000)
00085  *  .rtcm_MT1077_rate_ms - (.rtcm_MSM_rate_ms)
00086  *  .rtcm_MT1087_rate_ms - (.rtcm_MSM_rate_ms)
00087  *  .rtcm_MT1097_rate_ms - (.rtcm_MSM_rate_ms)
00088  *
00089  * Fixed-base RTK input through NTRIP (disabled by default):
00090  *  .ntrip_client_enabled - (false)
```

```
00091  *  .ntrip_caster_address - caster hostname or IPv4 address, without a scheme or port ("")
00092  *  .ntrip_caster_port - (2101)
00093  *  .ntrip_mountpoint - caster mountpoint ("")
00094  *  .ntrip_username - Basic-authentication username ("")
00095  *  .ntrip_password - Basic-authentication password ("")
00096  *  .ntrip_password_env - environment variable containing the password (""), mutually exclusive with
       .ntrip_password
00097  *  .ntrip_version - 2 prefers v2 with one compatible v1 retry; 1 forces legacy v1 (2)
00098  *  .ntrip_tls_enabled - TLS 1.2-or-newer transport with system-CA certificate and hostname
       verification (false)
00099  *  .ntrip_inactivity_timeout_ms - (10000)
00100  *  .ntrip_reconnect_interval_ms - (10000)
00101  *  .ntrip_max_correction_age_s - (5.0)
00102  *  .ntrip_send_gga - upload the rover position as NMEA GGA, required by VRS/nearest-station casters
       (true)
00103  *  .ntrip_gga_period_ms - period of the GGA upload (10000)
00104  *  .ntrip_station_id - expected RTCM station ID, or zero to accept any stream station (0)
00105  *  .ntrip_fallback_to_single - report SOLQ_SINGLE while fixed-base data is unavailable (true)
00106  * Supported rover channel sets, per system: GPS 1C alone, 1C+2S, or 1C+L5;
00107  * Galileo 1B alone or 1B+5X; BeiDou B1C alone; in any combination across
00108  * systems. num_bands is derived from the channel set, navigation_system must
00109  * match the enabled constellations, and positioning_mode must be Static or
00110  * Kinematic. The base must provide its position through RTCM 1005/1006 and
00111  * observations through legacy 1002/1004 or MSM messages; VRS/nearest-station
00112  * casters are supported through the periodic GGA upload.
00113  *
00114  *  .kml_rate_ms - (1000)
00115  *  .gpx_rate_ms - (1000)
00116  *  .geojson_rate_ms - (1000)
00117  *  .nmea_rate_ms - (1000)
00118  *
00119  *  .positioning_mode - The RTKLIB positioning mode. ("Single") Supported values are "Single",
00120  *                      "Static", "Kinematic", "PPP_Static" and "PPP_Kinematic". Unsupported modes
00121  *                      include DGPS/DGNSS, Moving Baseline, Fixed, and PPP-fixed
00122  *  .num_bands - number of frequencies to use, between 1 and 3. Default is based on the channels
       configured
00123  *  .elevation_mask - (15.0). Value must be in the range [0,90.0]
00124  *  .dynamics_model - (0) 0:none, 1:velocity, 2:acceleration
00125  *  .satellite_ephemeris - ("Broadcast"). Supported values are "Broadcast" and "SBAS".
00126  *                      "SBAS" applies the fast and long-term satellite corrections received
00127  *                      from an SBAS telemetry channel. Legacy EGNOS L1 corrections augment
00128  *                      GPS L1 observations; satellites without valid corrections are excluded
00129  *  .sbas_satellite - (0). SBAS PRN whose correction stream is used. Zero selects the first
00130  *                      received stream; set a PRN in [120,138] when tracking multiple GEOs
00131  *  .iono_model - ("OFF"). Supported values are "OFF", "Broadcast", "SBAS", "Iono-Free-LC",
00132  *                      "Estimate_STEC", "IONEX". Unsupported values include QZSS broadcast, QZSS
00133  *                      LEX, and SLANT TEC.
00134  *  .trop_model - ("OFF"). Supported values are "OFF", "Saastamoinen", "SBAS", "Estimate_ZTD", and
00135  *                      "Estimate_ZTD_Grad". Unsupported values include ZTD correction and ZTD+grad
00136  *                      correction
00137  *  .phwindup - phase windup correction for PPP modes (0)
00138  *  .reject_GPS_IIA - whether the GPS Block IIA satellites in eclipse are excluded (0). Only applies
       in PPP-* modes
00139  *  .raim_fde - whether RAIM (receiver autonomous integrity monitoring) FDE (fault detection and
       exclusion) is enabled (0)
00140  *  .earth_tide - (0)
00141  *  .navigation_system - mask of navigation systems to use. Default based on configured channels
00142  *                      0x01:GPS, 0x02:SBAS, 0x04:GLONASS, 0x08:Galileo, 0x10:QZSS, 0x20:BeiDou,
00143  *                      0x40:IRNS, 0x80:LEO
00144  *
00145  *  .AR_GPS - Ambiguity Resolution mode for GPS ("Continuous"). Supported values are "OFF",
00146  *                      "Continuous", "Instantaneous", "Fix-and-Hold", "PPP-AR". Unsupported values
00147  *                      include PPP-AR ILS, WLNL, and TCAR.
00148  *  .AR_GLO - Ambiguity Resolution mode for GLONASS (1). Value must be in the range [0,3].
       (0:off,1:on,2:auto cal,3:ext cal)
00149  *  .AR_DBS - Ambiguity Resolution Mode for BeiDou (1). Value must be in the range [0,1]. (0:off,1:on)
00150  *  .min_ratio_to_fix_ambiguity - (3.0)
00151  *  .min_lock_to_fix_ambiguity - (0)
00152  *  .min_elevation_to_fix_ambiguity - minimum elevation (deg) to fix integer ambiguity (0.0)
00153  *  .outage_reset_ambiguity - (5)
00154  *  .slip_threshold - (0.05)
00155  *  .threshold_reject_gdop - if GDOP is over this value, the observable is excluded (30.0)
00156  *  .threshold_reject_innovation - if innovation is over this value, the observable is excluded (30.0)
00157  *  .number_filter_iter - number of iterations for the estimation filter (1)
00158  *  .bias_0 - (30.0)
00159  *  .iono_0 - (0.03)
00160  *  .trop_0 - (0.3)
00161  *  .sigma_bias - process noise stddev of carrier-phase bias(ambiguity)(cycle/sqrt(s)) (1e-4)
00162  *  .sigma_iono - process noise stddev of vertical ionospheric delay per 10km baseline (m/sqrt(s))
       (1e-3)
00163  *  .sigma_trop - process noise stddev of zenith tropospheric delay (m/sqrt(s)) (1e-4)
00164  *  .sigma_acch - process noise stddev of the receiver acceleration horizontal component
       (m/s2/sqrt(s)) (1e-1)
00165  *  .sigma_accv - process noise stddev of the receiver acceleration vertical component (m/s2/sqrt(s))
       (1e-2)
00166  *  .sigma_pos - (0.0)
00167  *  .code_phase_error_ratio_l1 - (100.0)
```

```
00168  *  .code_phase_error_ratio_l2 - (100.0)
00169  *  .code_phase_error_ratio_l5 - (100.0)
00170  *  .carrier_phase_error_factor_a - (0.003)
00171  *  .carrier_phase_error_factor_b - (0.003)
00172  *
00173  *  .output_enabled - (true)
00174  *  .rinex_output_enabled - (.output_enabled)
00175  *  .gpx_output_enabled - (.output_enabled)
00176  *  .geojson_output_enabled - (.output_enabled)
00177  *  .kml_output_enabled - (.output_enabled)
00178  *  .xml_output_enabled - (.output_enabled)
00179  *  .nmea_output_enabled - (.output_enabled)
00180  *  .rtcm_output_enabled - (false)
00181
00182  *  .output_path - directory to which output files are written (".")
00183  *  .rinex_output_path - (.output_path)
00184  *  .gpx_output_path - (.output_path)
00185  *  .geojson_output_path - (.output_path)
00186  *  .kml_output_path - (.output_path)
00187  *  .xml_output_path - (.output_path)
00188  *  .nmea_output_path - (.output_path)
00189  *  .rtcm_output_path - (.output_path)
00190  *
00191  *  .enable_monitor - enable the PVT monitor (false)
00192  *  .monitor_client_addresses - ("127.0.0.1")
00193  *  .monitor_udp_port - DO NOT USE THE DEFAULT (1234)
00194  *  .enable_protobuf - serialize using protocol buffers (true). Monitor.enable_protobuf if true, sets
     this to true
00195  *
00196  *  .enable_monitor_ephemeris - enable the ephemeris monitor (false)

Classes

- class rtklib_pvt_gs

  This class implements a block that computes the PVT solution using the RTKLIB integrated library.

Typedefs

- using rtklib_pvt_gs_sptr = gnss_shared_ptr<rtklib_pvt_gs>

Functions

- rtklib_pvt_gs_sptr **rtklib_make_pvt_gs** (uint32_t nchannels, const Pvt_Conf &conf_, const rtk_t &rtk, const SensorDataSourceConfiguration &sensor_data_configuration)

13.229.1 Detailed Description

Interface of a Position Velocity and Time computation block.

Author

Javier Arribas, 2017. jarribas(at)cttc.es

13.243 kml_printer.h File Reference

Interface of a class that prints PVT information to a kml file.

```
#include <fstream>
#include <string>
```

Classes

- class Kml_Printer

  Prints PVT information to OGC KML format file (can be viewed with Google Earth).

13.243.1 Detailed Description

Interface of a class that prints PVT information to a kml file.

13.247 monitor_pvt.h File Reference

Interface of the Monitor_Pvt class.

```
#include <boost/serialization/nvp.hpp>
#include <boost/serialization/vector.hpp>
#include <cstdint>
#include <string>
#include <vector>
```

Classes

- class Monitor_Pvt

  This class contains parameters and outputs of the PVT block.

- class Monitor_Pvt::TrackedSatelliteInfo

  One tracked satellite/signal with its azimuth/elevation, whether it was combined with another signal of the same satellite (e.g. Galileo E1+E5a iono-free combination) and whether it was used in this fix. Signals are listed individually (one entry per satellite per signal): a combined satellite appears as two entries, both with combined = true.

13.247.1 Detailed Description

Interface of the Monitor_Pvt class.

13.253 ntrip_rtcm_client.h File Reference

NTRIP client for RTCM3 fixed-base corrections.

```
#include "pvt_conf.h"
#include "rtklib.h"
#include <array>
#include <cstddef>
#include <cstdint>
#include <functional>
#include <memory>
#include <string>
#include <vector>
```

Classes

- struct Ntrip_Rtcm_Client_Config
- struct Ntrip_Rtcm_Client_Status
- struct Ntrip_Rtcm_Snapshot
- class Ntrip_Rtcm_Client

  Receives and decodes a fixed-base RTCM3 stream from an NTRIP caster, preferring NTRIP v2 with a fresh-connection fallback to v1, or using forced v1, optionally over TLS.

Enumerations

- enum class **Ntrip_Rtcm_Client_State** {
  DISABLED , **STOPPED** , **STARTING** , **CONNECTING** ,
  AUTHENTICATING , **STREAMING** , **RECONNECT_WAIT** , **ERROR** ,
  STOPPING }

Functions

- void secure_clear_ntrip_credentials (Pvt_Conf ∗conf) noexcept

  Scrubs the NTRIP credential fields of a Pvt_Conf copy ahead of its destruction (the Secure_String fields wipe themselves on release, but a long-lived copy should drop its secrets as soon as they are consumed). Single home of the credential field list.
- bool ntrip_text_has_space_or_control (const std::string &text)

  True when the text contains whitespace or control characters — the character rule shared by the credential validation and the adapter's environment-variable-name check.
- Ntrip_Rtcm_Client_Config make_ntrip_rtcm_client_config (const Pvt_Conf &conf)

  Builds the NTRIP client configuration from the PVT configuration — the single home of the field mapping, shared by the adapter's validation and by the PVT block's client construction. The mountpoint is stored normalized; validate() and the transport-path builder normalize again defensively for directly-built configurations.

13.253.1 Detailed Description

NTRIP client for RTCM3 fixed-base corrections.

```

Classes

- struct Ntrip_Rtk_Signal

Functions

- bool ntrip_rtk_is_entry_band (const Ntrip_Rtk_Signal &signal)

  The entry band of every constellation occupies RTKLIB's first slot, so "first band" is band_slot == 0 by definition — a fact, not a column that could drift from the slot assignment.
- const std::array< Ntrip_Rtk_Signal, 6 > & ntrip_rtk_signals ()
- uint32_t ntrip_rtk_supported_signal_mask ()

  Bitmask of every signal_flag the NTRIP RTK path supports.
- int ntrip_rtk_navigation_systems (const Signal_Enabled_Flags &enabled)

  RTKLIB navigation-system mask spanned by the enabled NTRIP RTK channels.
- int ntrip_rtk_required_bands (const Signal_Enabled_Flags &enabled)

  Number of RTKLIB frequency slots the enabled NTRIP RTK channels require.
- int ntrip_rtk_second_band_slot (int system, const Signal_Enabled_Flags &enabled)
- const char * ntrip_rtk_system_label (int system)

  Constellation label of an RTKLIB system bit, for messages.
- bool ntrip_rtk_valid_channel_set (const Signal_Enabled_Flags &enabled)
- std::string ntrip_rtk_supported_sets_description ()

  Human-readable list of the supported per-system channel sets, derived from the table for the adapter's rejection message.

13.255.1 Detailed Description

Signal table of the NTRIP RTK path.

Classes

- class Rinex_Printer

  Class that handles the generation of Receiver INdependent EXchange format (RINEX) files.

13.263.1 Detailed Description

Interface of a RINEX 2.11 / 3.02 / 4.02 printer See https://files.igs.org/pub/data/format/↩rinex_4.02.pdf.

Receiver Independent EXchange Format (RINEX): The first proposal for the Receiver Independent Exchange Format RINEX was developed by the Astronomical Institute of the University of Berne for the easy exchange of the

GPS data to be collected during the large European GPS campaign EUREF 89, which involved more than 60 GPS receivers of 4 different manufacturers. The governing aspect during the development was the fact that most geodetic processing software for GPS data use a well-defined set of observables: 1) The carrier-phase measurement at one or both carriers (actually being a measurement on the beat frequency between the received carrier of the satellite signal and a receiver-generated reference frequency). 2) The pseudorange (code) measurement , equivalent to the difference of the time of reception (expressed in the time frame of the receiver) and the time of transmission (expressed in the time frame of the satellite) of a distinct satellite signal. 3) The observation time being the reading of the receiver clock at the instant of validity of the carrier-phase and/or the code measurements. Note: A collection of the formats currently used by the IGS can be found here: https://igs.org/formats-and-standards/

Classes

- class Rtklib_Solver

  This class implements a PVT solution based on RTKLIB.

Enumerations

- enum class **Rtklib_Fixed_Base_Status** {
  NOT_REQUESTED , **MISSING_OBSERVATIONS** , **MISSING_POSITION** , **STALE** ,
  INVALID_POSITION , **INSUFFICIENT_COMMON_SATELLITES** , **APPLIED** , **SOLVER_FALLBACK** ,
  SOLVER_FAILURE }

13.269.1 Detailed Description

PVT solver based on rtklib library functions adapted to the GNSS-SDR data flow and structures.

Authors

- 2017, Javier Arribas
- 2017-2026, Carles Fernandez
- 2007-2013, T. Takasu

Classes

- class Serdes_Gps_Eph

  This class implements serialization and deserialization of Gps_Ephemeris objects using Protocol Buffers.

13.277.1 Detailed Description

Serialization / Deserialization of Gps_Ephemeris objects using Protocol Buffers.

13.295.2 Typedef Documentation

13.295.2.1 signal_generator_c_sptr

```
using signal_generator_c_sptr = gnss_shared_ptr<signal_generator_c>
```

Definition at line 29 of file signal_generator_c.h.

13.295.3 Function Documentation

13.295.3.1 signal_make_generator_c()

```
signal_generator_c_sptr signal_make_generator_c (
            const std::vector< std::string > & signal1,
            const std::vector< std::string > & system,
            const std::vector< unsigned int > & PRN,
            const std::vector< float > & CN0_dB,
            const std::vector< float > & doppler_Hz,
            const std::vector< unsigned int > & delay_chips,
            const std::vector< unsigned int > & delay_sec,
            bool data_flag,
            bool noise_flag,
            unsigned int fs_in,
            unsigned int vector_length,
            float BW_BB)
```

Return a shared_ptr to a new instance of gen_source.

To avoid accidental use of raw pointers, gen_source's constructor is private. signal_make_generator_c is the public interface for creating new instances.

```

Classes

- class BladerfSignalSource

  This class instantiates the bladeRF signal source, streaming RX samples directly through libbladeRF (no gr-osmosdr or other intermediate driver required).

13.301.1 Detailed Description

Signal source for the Nuand bladeRF family of front-ends (bladeRF x40, x115, and bladeRF 2.0 Micro xA4/xA9), using libbladeRF directly.

#include <gnuradio/blocks/throttle.h>
#include <cstdint>
#include <string>
```

Classes

- class Evk1029SignalSource

  This class reads a SAPHYRION EVK1029 raw capture file.

13.307.1 Detailed Description

SAPHYRION EVK1029 signal source. Reads a continuous, header-less raw capture file (OBA-encoded 4-bit samples) directly, without going through the generic XML-metadata-driven ION_GSMS_Signal_Source path.
Successor of the old EVK10x9_signal_source: same overall structure (dedicated file reader + optional throttle + optional dump), updated for the current EVK1029 capture format (see evk1029_source.h).
Set role + ".RF_channels" to N > 1 (e.g. for a multi-band setup sharing a single IF capture) to feed N Signal Conditioners from ONE underlying Evk1029Source instance/read, instead of instantiating N separate SignalSourceN blocks each reading the file independently. Evk1029Source has a single output port (see its own header); gnss↩_flowgraph.cc's generic signal-source-to-conditioner wiring detects this (output_signature()->max_streams() == 1) and connects each of the N Signal Conditioners to that same port, so all of them read the same sample stream and GNU Radio keeps them within one output buffer of each other. The optional throttle sits between the source and that shared port, so .enable_throttle_control works for any RF_channels value. Set role + ".seconds_to_skip" to start reading at a given time into the capture (converted to a byte position using the raw sampling frequency).
GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

00038 class ConfigurationInterface;
00039
00040
00041 //! \brief Base class to file-oriented SignalSourceBase GNSS blocks.
00042 //!
00043 //! This class supports the following properties:
00044 //!
00045 //!   .filename - the path to the input file
00046 //!             - may be overridden by the -signal_source or -s command-line arguments
00047 //!
00048 //!   .samples  - number of samples to process (default 0)
00049 //!             - if not specified or 0, read the entire file; otherwise stop after that many samples
00050 //!
00051 //!   .sampling_frequency - the frequency of the sampled data (samples/second)
00052 //!
00053 //!   .item_type - data type of the samples (default "short")
00054 //!
00055 //!   .header_size - the size of a prefixed header to skip in "samples" (default 0)
00056 //!
00057 //!   .seconds_to_skip - number of seconds of lead-in data to skip over (default 0)
00058 //!
00059 //!   .enable_throttle_control - whether to stop reading if the upstream buffer is full (default
      false)
00060 //!
00061 //!   .repeat   - whether to rewind and continue at end of file (default false)
00062 //!
00063 //! (probably abstracted to the base class)
00064 //!
00065 //!   .dump     - whether to archive input data
00066 //!
00067 //!   .dump_filename - if dumping, path to file for output

```

Classes

- class FileTimestampSignalSource

  Class that reads signals samples from a file and adapts it to a SignalSourceInterface.

13.315.1 Detailed Description

This class reads samples stored in a file and generate stream tags with its timestamp information stored in separated file.

Classes

- class MultichannelFileSignalSource

  Class that reads signals samples from files at different frequency bands and adapts it to a SignalSourceInterface.

13.338.1 Detailed Description

Implementation of a class that reads signals samples from files at different frequency band and adapts it to a SignalSourceInterface.

Author

Javier Arribas, 2019 jarribas(at)cttc.es

This class represents a file signal source. Internally it uses a GNU Radio's gr_file_source as a connector to the data.

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.
Copyright (C) 2010-2020 (see AUTHORS file for a list of contributors) SPDX-License-Identifier: GPL-3.0-or-later

13.368 bladerf_source.h File Reference

GNU Radio source block for Nuand's bladeRF front-ends (bladeRF x40, x115, and bladeRF 2.0 Micro xA4/xA9), implemented directly against libbladeRF.

```
#include "gnss_block_interface.h"
#include <gnuradio/sync_block.h>
#include <cstdint>
#include <memory>
#include <string>
#include <vector>
```

Classes

- class bladerf_source

  This class implements a GNU Radio source block that streams RX samples from a bladeRF device (single RX channel) using libbladeRF's synchronous streaming API, converting the device's native BLADERF_FORMAT_SC16_Q11 samples to gr_complex.

Typedefs

- using bladerf_source_sptr = gnss_shared_ptr<bladerf_source>

Functions

- bladerf_source_sptr **bladerf_make_source_sptr** (const std::string &bladerf_args, const std::string &device_serial, double sample_rate, double freq, double bandwidth, double gain, bool agc_enabled, bool rx_bias_tee, unsigned int num_buffers, unsigned int buffer_size, unsigned int num_transfers, unsigned int stream_timeout_ms)

13.368.1 Detailed Description

GNU Radio source block for Nuand's bladeRF front-ends (bladeRF x40, x115, and bladeRF 2.0 Micro xA4/xA9), implemented directly against libbladeRF.

Classes

- class Evk1029Source

  Reads a continuous, header-less EVK1029 raw capture file and unpacks its OBA-encoded 4-bit samples (two per byte, low nibble first).

Typedefs

- using Evk1029Source_sptr = gnss_shared_ptr<Evk1029Source>

Functions

- Evk1029Source_sptr **evk1029_make_source** (const std::string &filename, Concurrent_Queue< pmt::pmt↩ _t > *queue, double sampling_frequency, uint64_t bytes_to_skip=0)

13.370.1 Detailed Description

Unpacks the SAPHYRION EVK1029 raw capture files (continuous stream of OBA-encoded 4-bit samples, 16 samples packed per little-endian 64-bit word, no periodic block header).
This is the successor of the old EVK10x9_source block, updated for the current EVK1029 capture format: the old format packed two 3-bit OBA samples per byte and inserted an 8-byte header every 2048-byte block; the current format is a continuous stream with no headers, packing two 4-bit OBA samples per byte (16 samples per 64-bit word, per the capture's .sdrx metadata: quantization=4, packedbits=64, encoding=OBA).
The block has a single output port. Multiple RF bands sharing the same raw capture (e.g. several Freq_Xlating_↩ Fir_Filter instances tuned to different IFs) are each connected to that one port (see the signal-source-to-conditioner wiring in gnss_flowgraph.cc, which takes this path whenever output_signature()->max_streams() == 1): GNU Radio supports several readers on one producer port, each with its own read pointer over the same buffer. The scheduler still throttles this block to the slowest of those readers (buffer::space_available() is bounded by the reader with the most unconsumed items), exactly as it would with one buffer per port, so the bands cannot drift apart by more than one output buffer. What the single port saves is the N-1 extra output buffers and the N-1 full-buffer memcpy calls per work() call, at up to the raw capture rate, that a port-per-band design needs in order to duplicate the same decoded samples.

```

Classes

- class labsat23_source

  This class implements conversion between Labsat 2, 3 and 3 Wideband formats to gr_complex.

Typedefs

- using labsat23_source_sptr = gnss_shared_ptr<labsat23_source>

Functions

- labsat23_source_sptr **labsat23_make_source_sptr** (const char *signal_file_basename, const std::vector< int > &channel_selector, Concurrent_Queue< pmt::pmt_t > *queue, bool digital_io_enabled, double seconds_to_skip)

13.378.1 Detailed Description

Unpacks capture files in the LabSat 2 (ls2), LabSat 3 (ls3), LabSat 3 Wideband (LS3W), and Labsat 4 (ls4) formats.

Classes

- class rtl_tcp_signal_source_c

  This class reads interleaved I/Q samples from an rtl_tcp server and outputs complex types.

Typedefs

- using rtl_tcp_signal_source_c_sptr = gnss_shared_ptr<rtl_tcp_signal_source_c>
- using b_io_context = boost::asio::io_service

Functions

- rtl_tcp_signal_source_c_sptr **rtl_tcp_make_signal_source_c** (const std::string &address, int16_t port, bool flip_iq=false)

13.380.1 Detailed Description

Interface of an rtl_tcp signal source reader.

Author

Anthony Arnold, 2015. anthony.arnold(at)uqconnect.edu.au

The implementation of this block is a combination of various helpful sources. The data format and command structure is taken from the original Osmocom rtl_tcp_source_f (https://git.osmocom.org/gr-osmosdr). The asynchronous reading code comes from the examples provides by Boost.Asio and the bounded buffer producer-consumer solution is taken from the Boost.CircularBuffer examples (https://www.boost.org/).

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

13.382 unpack_2bit_samples.h File Reference

Unpacks 2 bit samples samples may be packed in any of the following ways: 1) Into bytes [item == byte] 1a) Big endian ordering within the byte 1b) Little endian ordering within the byte 2) Into shorts [item == short] 2a) Big endian ordering of bytes, big endian within the byte 2b) Big endian ordering of bytes, little endian within the byte 2c) Little endian ordering of bytes, big endian within the byte 2d) Little endian ordering of bytes, little endian within the byte.

```
#include "gnss_block_interface.h"
#include <gnuradio/sync_interpolator.h>
#include <cstdint>
#include <vector>
```

Classes

- class unpack_2bit_samples

  This class takes 2 bit samples that have been packed into bytes or shorts as input and generates a byte for each sample. It generates eight times as much data as is input (every two bits become 16 bits).

Typedefs

- using unpack_2bit_samples_sptr = gnss_shared_ptr<unpack_2bit_samples>

Functions

- unpack_2bit_samples_sptr **make_unpack_2bit_samples** (bool big_endian_bytes, size_t item_size, bool big_endian_items, bool reverse_interleaving=false)

13.382.1 Detailed Description

Unpacks 2 bit samples samples may be packed in any of the following ways: 1) Into bytes [item == byte] 1a) Big endian ordering within the byte 1b) Little endian ordering within the byte 2) Into shorts [item == short] 2a) Big endian ordering of bytes, big endian within the byte 2b) Big endian ordering of bytes, little endian within the byte 2c) Little endian ordering of bytes, big endian within the byte 2d) Little endian ordering of bytes, little endian within the byte.
Within a byte the two possibilities look like this: 7 6 5 4 3 2 1 0 : Bit number x_n,1 x_n,0 x_n+1,1 x_n+1,0 x_n+2,1 x_n+2,0 x_n+3,1 x_n+3,0 : Little endian x_n+3,1 x_n+3,0 x_n+2,1 x_n+2,0 x_n+1,0 x_n+1,0 x_n,1 x_n, 0 : Big Endian
For a short (uint16_t) the bytes are either transmitted as follows:
1 0 : Byte number Byte_n Byte_n+1 : Little endian Byte_n+1 Byte_n : Bit endian
The two bit values are assumed to have the following mapping:
x_1 x_0 Value 0 0 +1 0 1 +3 1 0 -3 1 1 -1
Letting x denote the two's complement interpretation of x_1 x_0, then:
Value = 2∗x + 1
We want to output the data in the order:
Value_0, Value_1, Value_2, ..., Value_n, Value_n+1, Value_n+2, ...

13.427 rtl_tcp_commands.h File Reference

Defines structures and constants for communicating with rtl_tcp.

```
#include <boost/asio/ip/tcp.hpp>
#include <boost/system/error_code.hpp>
```

Enumerations

- enum RTL_TCP_COMMAND {
  RTL_TCP_SET_FREQUENCY = 1 , **RTL_TCP_SET_SAMPLE_RATE** = 2 , **RTL_TCP_SET_GAIN_MODE** = 3 , **RTL_TCP_SET_GAIN** = 4 ,
  RTL_TCP_SET_IF_GAIN = 6 , **RTL_TCP_SET_AGC_MODE** = 8 }

  Command IDs for configuration rtl_tcp.

Functions

- boost::system::error_code rtl_tcp_command (RTL_TCP_COMMAND id, unsigned param, boost::asio::ip::↩ tcp::socket &socket)

  Send a command to rtl_tcp over the given socket.

13.427.1 Detailed Description

Defines structures and constants for communicating with rtl_tcp.

13.437 beidou_dnav_telemetry_decoder_gs.h File Reference

Implementation of a BeiDou DNAV data decoder block for the B1I and B3I signals.

```
#include "beidou_dnav_navigation_message.h"
#include "nav_message_packet.h"
#include "telemetry_impl_interface.h"
#include <boost/circular_buffer.hpp>
#include <cstdint>
```

Classes

- class beidou_dnav_telemetry_decoder_gs

  This class implements a block that decodes the BeiDou DNAV data, broadcast by both the B1I and B3I signals (frequency_band = 1 or 3, respectively).

Typedefs

- using beidou_dnav_telemetry_decoder_gs_sptr = gnss_shared_ptr<beidou_dnav_telemetry_decoder_gs>

Functions

- beidou_dnav_telemetry_decoder_gs_sptr **beidou_dnav_make_telemetry_decoder_gs** (const Tlm_Conf &conf, int32_t frequency_band)

13.437.1 Detailed Description

Implementation of a BeiDou DNAV data decoder block for the B1I and B3I signals.
Code added as part of GSoC 2018 program.

Classes

- class galileo_telemetry_decoder_gs

  This class implements a block that decodes the INAV and FNAV data defined in Galileo ICD.

Typedefs

- using galileo_telemetry_decoder_gs_sptr = gnss_shared_ptr<galileo_telemetry_decoder_gs>

Functions

- galileo_telemetry_decoder_gs_sptr **galileo_make_telemetry_decoder_gs** (const Tlm_Conf &conf, int frame_type)

13.439.1 Detailed Description

Implementation of a Galileo unified INAV and FNAV message demodulator block.

13.453.2 Function Documentation

13.453.2.1 add_ms()

```
uint32_t gnss_tow::add_ms (
            uint32_t tow_ms,
            int64_t delta_ms)  [inline]
```

Definition at line 75 of file tow_utils.h.

13.453.2.2 floor_div()

```
int64_t gnss_tow::floor_div (
            int64_t numerator,
            int64_t denominator)  [inline]
```

Definition at line 99 of file tow_utils.h.

13.453.2.3 floor_to_second_ms()

```
uint32_t gnss_tow::floor_to_second_ms (
            uint32_t tow_ms)  [inline]
```

Definition at line 81 of file tow_utils.h.

13.453.2.4 fnav_current_symbol_delay_ms()

```
int64_t galileo_tow::fnav_current_symbol_delay_ms (
            uint32_t required_symbols)  [inline]
```

Definition at line 44 of file galileo_tow_utils.h.

13.453.2.5 inav_current_symbol_delay_ms()

```
int64_t galileo_tow::inav_current_symbol_delay_ms (
            uint32_t required_symbols,
            uint32_t code_period_ms)  [inline]
```

Definition at line 38 of file galileo_tow_utils.h.

13.453.2.6 sample_counter_delta()

```
int64_t gnss_tow::sample_counter_delta (
            uint64_t current,
            uint64_t reference)  [inline]
```

Definition at line 132 of file tow_utils.h.

13.453.2.7 seconds_to_ms()

```
uint32_t gnss_tow::seconds_to_ms (
            int32_t tow_s)  [inline]
```

Definition at line 69 of file tow_utils.h.

13.453.2.8 week_after_delta()

```
bool gnss_tow::week_after_delta (
            uint32_t week,
            uint32_t tow_ms,
            int64_t delta_ms,
            uint32_t & result_week)  [inline]
```

Definition at line 111 of file tow_utils.h.

13.453.2.9 wrap_ms()

```
uint32_t gnss_tow::wrap_ms (
            int64_t tow_ms)  [inline]
```

Definition at line 35 of file tow_utils.h.

13.453.3 Variable Documentation

13.453.3.1 WEEK_MS

```
uint32_t gnss_tow::WEEK_MS  [constexpr]
```

Definition at line 31 of file tow_utils.h.

Classes

- class Galileo_E1_Tcp_Connector_Tracking_cc

  This class implements a code DLL + carrier PLL VEML (Very Early Minus Late) tracking block for Galileo E1 signals.

Typedefs

- using galileo_e1_tcp_connector_tracking_cc_sptr = gnss_shared_ptr<Galileo_E1_Tcp_Connector_Tracking_cc>

Functions

- galileo_e1_tcp_connector_tracking_cc_sptr **galileo_e1_tcp_connector_make_tracking_cc** (int64_t fs_in, uint32_t vector_length, bool dump, const std::string &dump_filename, float pll_bw_hz, float dll_bw_hz, float early_late_space_chips, float very_early_late_space_chips, size_t port_ch0)

13.495.1 Detailed Description

Interface of a TCP connector block based on code DLL + carrier PLL VEML (Very Early Minus Late) tracking block for Galileo E1 signals.

Author

David Pubill, 2012. dpubill(at)cttc.es Luis Esteve, 2012. luis(at)epsilon-formacion.com Javier Arribas, 2011. jarribas(at)cttc.es

Code DLL + carrier PLL according to the algorithms described in: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach, Birkhauser, 2007

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

Classes

- class Gps_L1_Ca_Dll_Pll_Tracking_GPU_cc

  This class implements a DLL + PLL tracking loop block.

Typedefs

- using gps_l1_ca_dll_pll_tracking_gpu_cc_sptr = gnss_shared_ptr<Gps_L1_Ca_Dll_Pll_Tracking_GPU_cc>

Functions

- gps_l1_ca_dll_pll_tracking_gpu_cc_sptr **gps_l1_ca_dll_pll_make_tracking_gpu_cc** (int64_t fs_in, uint32_t vector_length, bool dump, std::string dump_filename, float pll_bw_hz, float dll_bw_hz, float early_↩ late_space_chips)

13.497.1 Detailed Description

Implementation of a code DLL + carrier PLL tracking block, GPU ACCELERATED.

Author

Javier Arribas, 2015. jarribas(at)cttc.es

Code DLL + carrier PLL according to the algorithms described in: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach, Birkhauser, 2007

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

```

Classes

- class Gps_L1_Ca_Tcp_Connector_Tracking_cc

  This class implements a DLL + PLL tracking loop block.

Typedefs

- using gps_l1_ca_tcp_connector_tracking_cc_sptr = gnss_shared_ptr<Gps_L1_Ca_Tcp_Connector_Tracking_cc>

Functions

- gps_l1_ca_tcp_connector_tracking_cc_sptr **gps_l1_ca_tcp_connector_make_tracking_cc** (int64_t fs_in, uint32_t vector_length, bool dump, const std::string &dump_filename, float early_late_space_chips, size_t port_ch0)

13.501.1 Detailed Description

Interface of a TCP connector block based on code DLL + carrier PLL.

Author

David Pubill, 2012. dpubill(at)cttc.es Javier Arribas, 2011. jarribas(at)cttc.es

Code DLL + carrier PLL according to the algorithms described in: K.Borre, D.M.Akos, N.Bertelsen, P.Rinder, and S.H.Jensen, A Software-Defined GPS and Galileo Receiver. A Single-Frequency Approach, Birkhauser, 2007
GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.
Copyright (C) 2010-2020 (see AUTHORS file for a list of contributors) SPDX-License-Identifier: GPL-3.0-or-later

```

Classes

- class Bayesian_estimator

  Bayesian_estimator is an estimator of noise characteristics (i.e. mean, covariance).

13.504.1 Detailed Description

Interface of a library with Bayesian noise statistic estimation.
Bayesian_estimator is a Bayesian estimator which attempts to estimate the properties of a stochastic process based on a sequence of discrete samples of the sequence.

13.525 lock_detectors.h File Reference

Interface of a library with a set of code and carrier phase lock detectors.

`#include <gnuradio/gr_complex.h>`

Functions

- float cn0_svn_estimator (const gr_complex *Prompt_buffer, int length, float coh_integration_time_s)

  cn0_svn_estimator is a Carrier-to-Noise (CN0) estimator based on the Signal-to-Noise Variance (SNV) estimator
- float cn0_m2m4_estimator (const gr_complex *Prompt_buffer, int length, float coh_integration_time_s)

  cn0_m2m4_estimator is a Carrier-to-Noise (CN0) estimator based on the Second- and Fourth-Order Moments Method (M2M4)
- float carrier_lock_detector (const gr_complex *Prompt_buffer, int length)

  A carrier lock detector.

13.525.1 Detailed Description

Interface of a library with a set of code and carrier phase lock detectors.
SNV_CN0 is a Carrier-to-Noise (CN0) estimator based on the Signal-to-Noise Variance (SNV) estimator [1]. Carrier lock detector using normalised estimate of the cosine of twice the carrier phase error [2].
[1] Marco Pini, Emanuela Falletti and Maurizio Fantino, "Performance Evaluation of C/N0 Estimators using a Real Time GNSS Software Receiver," IEEE 10th International Symposium on Spread Spectrum Techniques and Applications, pp.28-30, August 2008.

- class CubatureFilter
- class UnscentedFilter

13.527.1 Detailed Description

Interface of a library for nonlinear tracking algorithms.
CubatureFilter implements the functionality of the Cubature Kalman Filter, which uses multidimensional cubature rules to estimate the time evolution of a nonlinear system. UnscentedFilter implements an Unscented Kalman Filter which uses Unscented Transform rules to perform a similar estimation.
[1] I Arasaratnam and S Haykin. Cubature kalman filters. IEEE Transactions on Automatic Control, 54(6):1254–1269,2009.

13.543 acquisition_interface.h File Reference

Header file of the interface to an acquisition GNSS block.

```
#include "gnss_block_interface.h"
#include "gnss_synchro.h"
#include <memory>
```

Classes

- class AcquisitionInterface

  This abstract class represents an interface to an acquisition GNSS block.

13.543.1 Detailed Description

Header file of the interface to an acquisition GNSS block.

Author

Carlos Aviles, 2010. carlos.avilesr(at)googlemail.com Luis Esteve, 2011. luis(at)epsilon-formacion.com

This header file contains the interface to an abstract class for acquisition algorithms. Since all its methods are virtual, this class cannot be instantiated directly, and a subclass can only be instantiated directly if all inherited pure virtual methods have been implemented by that class or a parent class.

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

```

Classes

- class ConfigurationInterface

  This abstract class represents an interface to configuration parameters.

13.547.1 Detailed Description

This class represents an interface to configuration parameters.

Author

Carlos Aviles, 2010. carlos.avilesr(at)googlemail.com

The interface defines an accessor method that gets a parameter name as input and returns the value of this parameter, a string, as output. Property names are defined here. This is an abstract class for interfaces.

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.

Classes

- class TelemetryDecoderInterface

  This abstract class represents an interface to a navigation GNSS block.

13.556.1 Detailed Description

This class represents an interface to a telemetry decoder block.

Author

Javier Arribas, 2011. jarribas(at)cttc.es

Abstract class for telemetry decoders. Since all its methods are virtual, this class cannot be instantiated directly, and a subclass can only be instantiated directly if all inherited pure virtual methods have been implemented by that class or a parent class.

GNSS-SDR is a Global Navigation Satellite System software-defined receiver. This file is part of GNSS-SDR.
